

CONTENTS

1 CONCEPTS AND FOUNDATIONS OF REMOTE SENSING 1

- 1.1 Introduction 1
- 1.2 Energy Sources and Radiation Principles 3
- 1.3 Energy Interactions in the Atmosphere 9
- 1.4 Energy Interactions with Earth Surface Features 12
- 1.5 Data Acquisition and Interpretation 23
- 1.6 Reference Data 27
- 1.7 An Ideal Remote Sensing System 31
- 1.8 Characteristics of Real Remote Sensing Systems 32
- 1.9 Successful Application of Remote Sensing 35
- 1.10 Land and Geographic Information Systems 38
- 1.11 Organization of this Book 44
- Selected Bibliography 45

2 ELEMENTS OF PHOTOGRAPHIC SYSTEMS 49

- 2.1 Introduction 49
- 2.2 Early History of Aerial Photography 50
- 2.3 Basic Negative-to-Positive Photographic Sequence 53

- 2.4 Processing Black and White Films 56
- 2.5 Film Exposure 56
- 2.6 Film Density and Characteristic Curves 65
- 2.7 Spectral Sensitivity of Black and White Films 76
- 2.8 Color Film 79
- 2.9 Processing Color Films 83
- 2.10 Color Infrared Film 85
- 2.11 Filters 89
- 2.12 Aerial Cameras 94
- 2.13 Electronic Imaging 113
- 2.14 Video Recording 120
- 2.15 Basic Geometric Characteristics of Aerial Photographs 125
- 2.16 Photographic Resolution 140
- 2.17 Conclusion 144
- Selected Bibliography 144

3 INTRODUCTION TO AIRPHOTO INTERPRETATION 148

- 3.1 Introduction 148
- 3.2 Fundamentals of Airphoto Interpretation 149
- 3.3 Basic Photo Interpretation Equipment 159
- 3.4 Land Use/Land Cover Mapping 169

3.5	Geologic and Soil Mapping	178	4.9	Stereoscopic Plotting Instruments	330
3.6	Agricultural Applications	186	4.10	Orthophotos	335
3.7	Forestry Applications	192	4.11	Flight Planning	341
3.8	Rangeland Applications	201	4.12	Soft Copy Photogrammetry	348
3.9	Water Resource Applications	202		Selected Bibliography	350
3.10	Urban and Regional Planning Applications	214	5	MULTISPECTRAL, THERMAL, AND HYPER SPECTRAL SCANNING	352
3.11	Wetland Mapping	218	5.1	Introduction	352
3.12	Wildlife Ecology Applications	222	5.2	Across-Track Multispectral Scanning	353
3.13	Archaeological Applications	229	5.3	Along-Track Multispectral Scanning	364
3.14	Environmental Assessment	232	5.4	Across-Track Thermal Scanning	367
3.15	Principles of Landform Identification and Evaluation	235	5.5	Thermal Radiation Principles	369
3.16	Bedrock Landforms	245	5.6	Interpreting Thermal Scanner Imagery	380
3.17	Aeolian Landforms	256	5.7	Geometric Characteristics of Across-Track Scanner Imagery	393
3.18	Glacial Landforms	263	5.8	Radiometric Calibration of Thermal Scanners	406
3.19	Fluvial Landforms	278	5.9	Temperature Mapping with Thermal Scanner Data	408
3.20	Organic Landforms	285	5.10	FLIR Systems	412
	Selected Bibliography	287	5.11	Imaging Spectrometry	413
4	PHOTOGRAMMETRY	295	5.12	Conclusion	422
4.1	Introduction	295		Selected Bibliography	422
4.2	Geometric Elements of a Vertical Photograph	298	6	EARTH RESOURCE SATELLITES OPERATING IN THE OPTICAL SPECTRUM	427
4.3	Determining Horizontal Ground Lengths, Directions, and Angles from Photocoordinates	302	6.1	Introduction	427
4.4	Relief Displacement of Vertical Features	307	6.2	Early History of Space Imaging	428
4.5	Image Parallax	313	6.3	Landsat Satellite Program Overview	430
4.6	Parallax Measurement	318			
4.7	Ground Control for Aerial Photography	325			
4.8	Use of Ground Control in Determining the Flying Height and Air Base of Aerial Photographs	326			

- 6.4 Orbit Characteristics of Landsat-1, -2, and -3 432
- 6.5 Sensors Onboard Landsat-1, -2, and -3 435
- 6.6 Landsat MSS Image Interpretation 444
- 6.7 Orbit Characteristics of Landsat-4 and -5 462
- 6.8 Sensors Onboard Landsat-4 and -5 466
- 6.9 Landsat TM Image Interpretation 471
- 6.10 Landsat-6 Planned Mission 480
- 6.11 Landsat ETM Image Simulation 484
- 6.12 Landsat-7 484
- 6.13 SPOT Satellite Program 486
- 6.14 Orbit Characteristics of SPOT-1, -2, and -3 487
- 6.15 Sensors Onboard SPOT-1, -2, and -3 487
- 6.16 SPOT HRV Image Interpretation 492
- 6.17 SPOT-4 and -5 496
- 6.18 Meteorological Satellites 498
- 6.19 Ocean Monitoring Satellites 509
- 6.20 Earth Observing System 513
- Selected Bibliography 517

7 DIGITAL IMAGE PROCESSING 524

- 7.1 Introduction 524
- 7.2 Image Rectification and Restoration 527
- 7.3 Image Enhancement 542
- 7.4 Contrast Manipulation 542
- 7.5 Spatial Feature Manipulation 553
- 7.6 Multi-Image Manipulation 567
- 7.7 Image Classification 585
- 7.8 Supervised Classification 587

- 7.9 The Classification Stage 589
- 7.10 The Training Stage 596
- 7.11 Unsupervised Classification 604
- 7.12 The Output Stage 608
- 7.13 Postclassification Smoothing 609
- 7.14 Classification Accuracy Assessment 611
- 7.15 Data Merging and GIS Integration 619
- 7.16 Biophysical Modeling 627
- 7.17 Scale Effects 629
- 7.18 Conclusion 634
- Selected Bibliography 634

8 MICROWAVE SENSING 648

- 8.1 Introduction 648
- 8.2 Radar Development 649
- 8.3 SLAR System Operation 653
- 8.4 Spatial Resolution of SLAR Systems 655
- 8.5 Geometric Characteristics of SLAR Imagery 662
- 8.6 Transmission Characteristics of Radar Signals 668
- 8.7 Earth Surface Feature Characteristics Influencing Radar Returns 669
- 8.8 Interpretation of SLAR Imagery 675
- 8.9 Experimental Radar Remote Sensing from Space 682
- 8.10 Almaz-1 698
- 8.11 ERS Satellite Program 700
- 8.12 Sensors Onboard ERS-1 700
- 8.13 ERS-1 AMI Image Interpretation 700
- 8.14 JERS-1 708
- 8.15 Radarsat 710
- 8.16 Spaceborne Radar System Summary 712

8.17 Radar Remote Sensing of
Venus 713

8.18 Elements of Passive Microwave
Sensing 713

8.19 Passive Microwave Sensors
718

8.20 Applications of Passive
Microwave Sensing 721

8.21 Lidar 722

Selected Bibliography 724
