Chapter 1. Physiological Processes in Plant Ecology: the Structure for a Synthesis	1
1.1 The Space-Time Scale	2
1.2 Utility of the Space-Time Scale	7
1.3 The Quest for Adaptive Significance Among Physiological Processes	9
1.4 Structure for a Synthesis	10
Chapter 2. Systematic and Geographical State of <i>Atriplex</i>	12
2.1 The Habit and Morphology of <i>Atriplex</i>	14
2.1.1 The Fruiting Bracts	14
2.1.2 Seed Morphology	17
2.1.3 Epidermal Trichomes	18
2.1.4 Leaf Morphology and Anatomy	20
2.2 A Species List for <i>Atriplex</i>	24
2.3 Geographical Distribution of Species	31
2.3.1 Diversification of Species in Relation to Aridity	32
2.3.2 The Tropics as Barriers to Migration	36
2.3.3 Origins of the Genus	36
2.4 Perspectives from the Systematic and Geographical States	38
Chapter 3. Genecological Differentiation	41
3.1 Intra-Specific Variation and Ecotypic Differentiation	42
3.2 Morphological Aspects of Genecological Differentiation	43
3.3 Genetic Coherence Between Functional and Morphological Characteristics	47
3.4 Physiological Aspects of Genecological Differentiation	51
3.4.1 Light Intensity	52
3.4.2 Temperature	54
3.4.3 Drought	58
3.4.4 Edaphic Factors	59
3.5 Concluding Remarks	65

Chapter 4. Genetic and Evolutionary Relationships in <i>Atriplex</i>	66
4.1 Chromosome Numbers in <i>Atriplex</i>	66
4.2 Genetic Structures and Evolutionary Trends in the <i>Atriplex triangularis</i> Group	75
4.2.1 Prezygotic Hybridization Barriers	77
4.2.2 Zygotic Hybridization Barriers	79
4.2.3 Polymorphism	81
4.2.4 Evolutionary Trends	83
4.3 Interspecific Relationships and Distribution of C ₄ Photosynthesis in <i>Atriplex</i>	84
4.3.1 C ₄ Photosynthesis	84
4.3.2 A Phylogenetic Scheme for <i>Atriplex</i>	86
4.3.3 Inter-Specific Crossing Experiments in <i>Atriplex</i>	89
4.3.4 Inter-Specific Hybridization in Natural Populations	91
4.3.5 DNA Sequence Comparisons in <i>Atriplex</i>	92
4.3.6 Intraspecific C ₃ /C ₄ Differentiation?	96
4.4 Inheritance of C ₄ Photosynthesis in <i>Atriplex</i>	97
Chapter 5. <i>Atriplex</i> Communities: Regional Environments and Their Ecological Analysis	111
5.1 Communities of Arid Continental Interiors	111
5.1.1 Arid Shrub Steppe	112
5.1.2 Arid Halophytic Communities	118
5.2 Coastal Communities	122
5.2.1 Sand Dune Communities	123
5.2.2 Salt Marsh Communities	126
5.3 Weed and Ruderal Communities	128
5.4 The Major <i>Atriplex</i> Habitats – a Resumé	131
5.5 Regional Variation in <i>Atriplex</i> Shrublands	132
5.5.1 Ordination of Large-Scale Variation in Plant Communities	132
5.5.2 Ordination of the Australian Arid Shrublands	135
5.6 Local Variation and Pattern in <i>Atriplex</i> Shrublands	138
5.6.1 Pattern Analysis	138
5.6.2 Pattern Analysis in Arid <i>Atriplex</i> Shrublands	139
5.7 Regularity in Arid Vegetation	144
5.8 Patterns of Biomass and Nutrient Distribution	147
5.8.1 Biomass Distribution in Arid Shrublands	148
5.8.2 Nutrient and Salt Distribution	150
5.8.3 Distribution of Microbiological Activity	152
5.9 Ecological States in Perspective	153
Chapter 6. Germination and Seedling Establishment	155
6.1 Germination Processes	156
6.1.1 Water Relations of Germinating Seeds	157

6.1.2	Fruit Morphology and the Soil to Seed Water Potential Gradient	158
6.1.3	Seed Dimorphism and the Conductance of the Water Transport Pathway	161
6.1.4	Temperature Responses of Germination	164
6.1.5	Germination and Light	166
6.1.6	Gas Exchange and Seed Germination	167
6.1.7	Other Factors Regulating Germination	168
6.2	Establishment Processes	169
6.2.1	Water Relations During Establishment	170
6.2.2	Nutrition During Establishment	171
6.2.3	Metabolic and Morphological Changes During Establishment	173
6.3	Physiological Processes of Germination and Establishment in the Context of Ecological Processes	174
6.3.1	Germination Processes and Reproductive Strategy	175
6.3.2	Dispersal Factors in Germination and Establishment	177
6.3.3	Herbivory in Germination and Establishment	179
6.3.4	Evaluation of Germination and Establishment Processes	182
6.3.5	Establishment Processes and Population Dynamics in Natural Conditions	184
6.4	Conclusions	190
Chapter 7. Absorption of Ions and Nutrients		191
7.1	Ionic Concentration, Distribution, and Pathways in the Soil-Plant System	192
7.1.1	States of Ions and Nutrients in the Soil	192
7.1.2	Pathways and Compartments for Ions in Plants	197
7.1.3	States of Ions and Nutrients in Plants	199
7.2	Ion Absorption Processes in Plants	202
7.2.1	Ion Absorption and Concentration	203
7.2.2	Passive and Active Processes of Ion Absorption	206
7.3	Absorption of Nutrient Anions and Interactions with Cell Metabolism	210
7.3.1	Nitrogen Absorption and Incorporation	211
7.3.2	Metabolic Consequences of Nitrogen Incorporation	212
7.3.3	Interactions Between NO_3^- and Cl^- During Absorption and Incorporation	214
7.3.4	Efficiency of Nitrogen Utilization	217
7.3.5	Phosphate Absorption	218
7.3.6	Micronutrient Ions and Toxicity	220
7.4	Salinity Responses in <i>Atriplex</i>	222
7.4.1	Salt Exclusion, Salt Accumulation, and Salinity Tolerance	223
7.4.2	Salt Absorption by <i>Atriplex</i> Seedlings as a Function of External Concentration	224
7.4.3	NaCl Uptake and Transport	227

7.4.4	K ⁺ and Na ⁺ Selectivity in Halophytes	230
7.4.5	Ion Uptake and Excretion in Leaves	232
7.4.6	Salinity, Metabolism and Growth	236
7.5	Ion and Nutrient Absorption Processes in the Context of Ecological Processes	242
7.5.1	Mineral Cycling Within the Plant Community	242
7.5.2	Mineral Cycling and Stability of Arid Shrublands	247
7.5.3	Consequences of Plant Ion and Nutrient Absorption Processes at Higher Trophic Levels	248
7.6	Conclusions	249
Chapter 8. Water Movement and Plant Response to Water Stress		251
8.1	Water Transport	253
8.1.1	The States of Water	253
8.1.2	Water Potentials in the Atmosphere, Plant, and Soil	254
8.1.3	Pathways for Water Movement	260
8.1.4	Dynamics of Water Movement Through the Plant	265
8.1.5	Water Movement in Relation to Energy Balance	267
8.1.6	Components of Water Potential	270
8.2	Response and Adaptation to Water Stress	273
8.2.1	Stomatal Regulation of Water Loss and Water Use Efficiency	273
8.2.2	Changes in Leaf Inclination and Reflectance	280
8.2.3	Root Extension and Water Uptake	282
8.2.4	Osmotic Adjustment in Response to Low Tissue Water Potential	284
8.2.5	Conclusions	290
Chapter 9. Photosynthesis		291
9.1	The Photosynthetic Process	292
9.1.1	Photochemistry	292
9.1.2	CO ₂ Fixation and Metabolism	295
9.2	Photosynthetic Responses to Light	301
9.2.1	Photosynthetic Light Acclimation in <i>Atriplex triangularis</i>	302
9.2.2	Photoinhibition	312
9.2.3	Light Utilization by C ₃ and C ₄ <i>Atriplex</i> spp.	316
9.3	Photosynthetic Responses to Temperature	321
9.3.1	Photosynthetic Characteristics of Cold-Adapted and Heat-Adapted C ₃ and C ₄ Plants	323
9.3.2	Environmentally Induced Acclimation to Temperature	328
9.3.3	Leaf Factors Determining Photosynthetic Capacity at Low Temperatures	333
9.3.4	High Temperature Stability of Photosynthesis	340

9.4	Photosynthesis in Relation to Water Use and Water Stress	347
9.4.1	Photosynthetic Water Use Efficiency	347
9.4.2	Photosynthesis in Relation to Water Stress	355
9.5	Photosynthesis in Relation to Salinity and Mineral Nutrition	367
9.5.1	Response to Salinity	368
9.5.2	Response to Mineral Nutrition	371
9.5.3	Photosynthesis and Micronutrients	376
9.6	Conclusions	377
 Chapter 10. Productivity and Environment		378
10.1	Photosynthesis and Photosynthate Partitioning in Relation to Primary Productivity	378
10.2	Productivity in Relation to Light	380
10.3	Productivity in Relation to Temperature	386
10.3.1	Performance in Thermally Contrasting Habitats	386
10.3.2	Response of Growth to Temperature Under Controlled Conditions	391
10.3.3	Effect of Temperature on Photosynthate Partitioning	394
10.4	Productivity in Relation to Mineral Nutrition and Salinity	397
10.5	Productivity in Relation to Water	403
10.6	Productivity in Plant Communities	411
10.6.1	Annual Patterns of Productivity in Cool-Desert Shrub Communities	411
10.6.2	Long-Term Productivity in Arid Ecosystems	414
10.7	Effect of Future Increase in CO ₂ Level on Water Use and Productivity	419
