Pre	eface	to the second edition	vi		
Pre	eface	to the first edition	vii		
I	Mat	thematical finance in one period	1		
1	Arb	itrage theory	3		
	1.1	Assets, portfolios, and arbitrage opportunities	3		
	1.2	Absence of arbitrage and martingale measures	7		
	1.3	Derivative securities	16		
	1.4	Complete market models	27		
	1.5	Geometric characterization of arbitrage-free models	33		
	1.6	Contingent initial data	37		
2	Preferences				
	2.1	Preference relations and their numerical representation	51		
	2.2	Von Neumann–Morgenstern representation	57		
	2.3	Expected utility	67		
	2.4	Uniform preferences	83		
	2.5	Robust preferences on asset profiles	94		
	2.6	Probability measures with given marginals	113		
3	Opti	imality and equilibrium	121		
	3.1	Portfolio optimization and the absence of arbitrage	121		
	3.2	Exponential utility and relative entropy			
	3.3	Optimal contingent claims	139		
	3.4	Optimal payoff profiles for uniform preferences	148		
	3.5	Robust utility maximization	151		
	3.6	Microeconomic equilibrium	159		
4	Mor	netary measures of risk	175		
	4.1	Risk measures and their acceptance sets	176		
	4.2	Robust representation of convex risk measures	186		
	4.3	Convex risk measures on L^{∞}	199		

4.4	Value at Risk		•	•	•	•	•	•		207
4.5	Law-invariant risk measures		•		•		•			213
4.6	Concave distortions		•				•			219
4.7	Comonotonic risk measures		•		•	•	•		•	228
4.8	Measures of risk in a financial market	,		•			•	•		236
4.9	Utility-based shortfall risk and divergence risk measures									246

II Dynamic hedging

259

5	Dyn	amic arbitrage theory	261			
	5.1	The multi-period market model	261			
	5.2	Arbitrage opportunities and martingale measures	266			
	5.3	European contingent claims	274			
	5.4	Complete markets	287			
	5.5	The binomial model	290			
	5.6	Exotic derivatives	296			
	5.7	Convergence to the Black–Scholes price	302			
6	Am	erican contingent claims	321			
	6.1	Hedging strategies for the seller	321			
	6.2	Stopping strategies for the buyer	327			
	6.3	Arbitrage-free prices	337			
	6.4	Stability under pasting	342			
	6.5	Lower and upper Snell envelopes	347			
7	Superhedging					
7	Sup	erhedging	354			
7	Sup 7.1	erhedging P-supermartingales				
7	-	6 6	354			
7	7.1	\mathcal{P} -supermartingales	354 356

10	Mini	imizing the hedging error	428
	10.1	Local quadratic risk	. 428
	10.2	Minimal martingale measures	. 438
	10.3	Variance-optimal hedging	. 449
11	Dyna	amic risk measures	456
	11.1	Conditional risk measures and their robust representation	456
	11.2	Time consistency	465
Appendix			
_	A.1	Convexity	476
	A.2	Absolutely continuous probability measures	
	A.3	Quantile functions	484
	A.4	The Neyman–Pearson lemma	493
	A.5	The essential supremum of a family of random variables	. 496
	A.6	Spaces of measures	. 497
	A.7	Some functional analysis	. 507
