List of Abbreviations XV

List of Symbols XVII

- 1 Introduction 1
  - 1.1 Historical Survey 1
  - 1.2 Present Status 4
    - 1.2.1 Theory 4
    - 1.2.2 Methodology 4
    - 1.2.3 Instrumentation 5
    - 1.2.4 Applications 6
  - 1.3 Capillary Isotachopheresis and Other Electrophoretic Methods 6
  - 1.4 Review Articles 7
  - 1.5 References 8
  
- 2 Electrophoresis as an Analytical Separation Method 11
  - 2.1 Introduction 11
  - 2.2 Electrophoretic Techniques 12
  - 2.3 Zone Electrophoresis 13
  - 2.4 Isoelectric Focusing 13
  - 2.5 Isotachopheresis 15
  
- 3 General Concepts 17
  - 3.1 Concept of Electrophoretic Mobility 17
    - 3.1.1 Basic Information 17
    - 3.1.2 Mobility Data 17
    - 3.1.3 Actual Mobility 18
    - 3.1.4 Influence of Chemical Equilibria: the Effective Mobility 19
  - 3.2 Electric Current and Mass Transfer 21
    - 3.2.1 Passage of Electric Current Through a Homogeneous Electrolyte 21
    - 3.2.2 Stationary and Moving Boundaries 22
    - 3.2.3 Steady State and Diffusion Boundaries 24
    - 3.2.4 Moving Boundary Equation 25

3.2.5	Moving Reaction Boundary	27
3.2.6	Zone Migration of Substances	29
3.2.7	Frontal Migration of $H^+$ and $OH^-$	30
3.2.8	Regulating Function	32
3.3	Effects Accompanying Electrophoresis	33
3.3.1	Joule Heat	34
3.3.2	Electroosmosis	34
3.3.3	Diffusion	35
3.3.4	Gravity	35
3.3.5	Zone Stabilization in Electrophoresis	36
3.3.6	Capillary Electrophoresis in Free Solutions	36
3.4	References	37
4	Basic Information on Analytical Capillary Isotachophoresis	39
4.1	General Characteristics	39
4.2	Phenomenological Description of the Isotachophoretic Analysis	39
4.3	Basic Data Concerning the Working Conditions and Instrumentation	42
4.4	Properties of the Isotachophoretic System	42
4.4.1	Principle of the Same Velocity	42
4.4.2	Self-Sharpening Effect of the Zone Boundary	43
4.4.3	Concentrating Effect	46
4.5	Properties of Isotachophoretic Zones and their Use for Detection	47
4.5.1	Field Strength and Conductivity	47
4.5.2	Temperature	48
4.5.3	Concentration and pH	48
4.5.4	Specific Zone Properties	49
4.5.5	Inversions of Zone Properties	50
4.6	References	51
5	Isotachophoretic Analysis	53
5.1	Separation and Recording Data	53
5.1.1	Introduction	53
5.1.2	Separation and Detection	53
5.1.3	Separation Charge and Column Hold-Up	56
5.1.4	Separation Capacity	59
5.1.5	Control of the Separation and Experimental Options	60
5.2	Qualitative Analysis	61
5.2.1	Introduction	61

- 5.2.2 Qualitative Data and their Use 62
    - 5.2.2.1 Identification According to the Migration Order 62
    - 5.2.2.2 Identification According to the Step Heights 63
  - 5.2.3 Identification of Individual and Mixed Zones 65
    - 5.2.3.1 Transient Mixed Zones 65
    - 5.2.3.2 Stable Mixed Zones 67
  - 5.2.4 Use of Universal Detectors 70
    - 5.2.4.1 Potential Gradient Detection 70
    - 5.2.4.2 Conductivity (Conductimetric) Detection 72
    - 5.2.4.3 Thermometric Detection 73
    - 5.2.4.4 Effect of the Driving Current 74
  - 5.2.5 Use of Selective Detectors 75
  - 5.3 Quantitative Analysis 76
    - 5.3.1 Introduction 76
    - 5.3.2 Concentration Expressions 77
    - 5.3.3 Principles 77
    - 5.3.4 Measuring of Quantitative Parameters 80
    - 5.3.5 Techniques of Quantitative Analysis 81
      - 5.3.5.1 External Standard Technique 82
      - 5.3.5.2 Internal Standard Technique 84
      - 5.3.5.3 Standard Addition Technique 84
    - 5.3.6 Quantification by Calculation of the Steady State Composition of the Isotachophoretic Zones 85
  - 5.4 References 86
- 
- 6 Electrolyte Systems 89
    - 6.1 Basic Properties 89
      - 6.1.1 Solubility and Stability of Substances 89
      - 6.1.2 Ionization of Substances and Buffering of the Zones 89
      - 6.1.3 Migration Effects of  $H^+$  and  $OH^-$  – Correct Systems 93
    - 6.2 Stability of Zones 97
      - 6.2.1 Criterion of Zone Stability 97
      - 6.2.2 Correct Zone Migration 97
      - 6.2.3 Influence of  $c_L$  and  $pK_X$  on the Stability and Character of the Migration 99
      - 6.2.4 Enforced Stability 100
    - 6.3 Separability of Substances 101
      - 6.3.1 Criterion of Separability 101
      - 6.3.2 Stable Mixed Zones 103
        - 6.3.2.1 Enforced Stable Mixed Zones 103

6.3.2.2	Classical Stable Mixed Zones	106
6.3.3	Practical Procedures for Testing Separability	106
6.3.4	Control of Separability	107
6.4	References	110
7	Instrumentation for Isotachophoresis	111
7.1	Basic Features	111
7.1.1	Column	111
7.1.2	Injection Device	112
7.1.3	Separation Channel	113
7.1.4	Electrode Chambers and Electrodes	115
7.1.5	Detectors	115
7.1.5.1	Conductivity Detector	117
7.1.5.2	Potential Gradient Detector	118
7.1.5.3	UV Detector	118
7.1.5.4	Other Types of Detectors	120
7.1.6	High Voltage Power Supply	120
7.2	Advanced Techniques	121
7.2.1	Counter Flow Technique	121
7.2.2	Continuous Sampling	122
7.2.3	Concentration Cascade	123
7.2.4	Volume Coupling	124
7.2.5	Column Coupling (Column Switching)	124
7.2.6	Discontinuous Micropreparation	126
7.2.7	Elution from the Separation Capillary	127
7.2.8	Continuous Preparative Isotachophoresis	128
7.2.9	Automation, Data Processing and Multichannel Detection	129
7.3	Commercial Instrumentation for Isotachophoresis	131
7.3.1	LKB 2127 Tachophor	131
7.3.2	Isotachophoretic Analyzer Shimadzu IP-2A	133
7.3.3	CS Isotachophoretic Analyzer	136
7.3.4	Electrophoretic Preparative Instrument Elphor Vap 21	137
7.4	References	138
8	Physicochemical and Mathematical Description of Isotachophoresis	141
8.1	Calculation of the Composition of Isotachophoretic Zones	141
8.1.1	Introduction	141

8.1.2	Mathematical Description of the Basic Model	141
8.1.3	Method of Calculation	145
8.1.4	Anionic System	146
8.1.5	Cationic System	148
8.2	Zone Existence Diagrams and their Use	150
8.2.1	Concept of the Zone Existence Diagram	150
8.2.2	Existence Contours and Domain of Stability	150
8.2.3	Sequence Contours and Domains of Separability	152
8.2.4	Sequence Contours and Domains of Inversions	155
8.2.5	Sequence Contours and Domains of Stable Mixed Zones	155
8.2.6	Determination of Separability	157
8.3	Physicochemical Measurements by Isotachophoresis	157
8.3.1	General Characteristics	157
8.3.2	Measurement of the Mobilities	158
8.3.3	Evaluation of Ionic Mobilities	159
8.3.4	Evaluation of Dissociation Constants	159
8.4	References	160
9	Special Systems and Methods	161
9.1	Quasi Steady State Isotachophoresis	161
9.2	Isotachophoresis of Complexes. Analytical Use of Unstable Zones	163
9.2.1	Introduction	163
9.2.2	Classification of Zones According to their Stability	164
9.2.3	Analytical Use of Stable Zones	164
9.2.4	Analytical Aspects of Unstable Zones	167
9.3	Use of Spacers	169
9.4	Protein Analysis Specification	170
9.5	Use of Nonaqueous Solvents	172
9.6	Isotachophoresis in Noncapillary Systems	173
9.7	References	175
10	Practical Aspects of Isotachophoretic Analysis	177
10.1	Analytical Possibilities of Capillary Isotachophoresis	177
10.2	Strategy of Isotachophoretic Analysis	178
10.2.1	Direct Way	179
10.2.2	Method of Trial and Error	182
10.2.3	Computation	187
10.3	Recommended Electrolyte Systems	187

XIV Contents

10.4	Some Practical Problems	192
10.4.1	Electroosmosis	193
10.4.2	Joule Heat	194
10.4.3	Diffusion	196
10.4.4	Gravity Effects	197
10.4.5	Sorption	197
10.4.6	Electrolyte Impurities	198
10.4.7	Effects on the Detection Electrodes	200
10.5	Some Practical Hints	201
10.6	References	202
11	Utilization of Capillary Isotachopheresis in Practice	203
11.1	Analysis of Body Fluids	204
11.1.1	Carboxylic Acids	204
11.1.2	Amino Acids and Peptides	207
11.1.3	Purines, Pyrimidines, and Organic Bases	210
11.1.4	Nucleotides and Nucleosides	212
11.1.5	Proteins	213
11.1.6	Inorganic Ions	216
11.2	Drug Analysis	216
11.3	Foodstuff Analysis	218
11.4	Environmental Analysis	220
11.5	Analysis of Agricultural Samples	221
11.6	Analysis of Industrial Samples	222
11.7	Miscellaneous	223
11.8	References	224
	Appendix	231
	Index	233
