Chapter 1 — Sources and Characteristics of Remote Sensing Image Data	1
1.1 Introduction to Data Sources	1
1.1.1 Characteristics of Digital Image Data	1
1.1.2 Spectral Ranges Commonly Used in Remote Sensing	2
1.1.3 Concluding Remarks	6
1.2 Weather Satellite Sensors	7
1.2.1 Polar Orbiting and Geosynchronous Satellites	7
1.2.2 The NOAA AVHRR (Advanced Very High Resolution Radiometer)	8
1.2.3 The Nimbus CZCS (Coastal Zone Colour Scanner)	8
1.2.4 GMS VISSR (Visible and Infrared Spin Scan Radiometer)	8
1.3 Earth Resource Satellite Sensors in the Visible and Infrared Regions	9
1.3.1 The Landsat System	9
1.3.2 The Landsat Instrument Complement	10
1.3.3 The Return Beam Vidicon (RBV)	11
1.3.4 The Multispectral Scanner (MSS)	11
1.3.5 The Thematic Mapper (TM)	13
1.3.6 The SPOT High Resolution Visible (HRV) Imaging Instrument	14
1.3.7 The Skylab S 192 Multispectral Scanner	15
1.3.8 The Heat Capacity Mapping Radiometer (HCMR)	15
1.3.9 Marine Observation Satellite (MOS)	16
1.3.10 Indian Remote Sensing Satellite (IRS)	17
1.4 Aircraft Scanners in the Visible and Infrared Regions	17
1.4.1 General Considerations	17
1.4.2 The Daedalus AADS 1240/1260 Multispectral Line Scanner	18
1.4.3 The Airborne Thematic Mapper (ATM)	19
1.4.4 The Thermal Infrared Multispectral Scanner (TIMS)	20
1.4.5 The MDA MEIS-II Linear Array Aircraft Scanner	21
1.4.6 Imaging Spectrometers	21
1.5 Image Data Sources in the Microwave Region	24
1.5.1 Side Looking Airborne Radar and Synthetic Aperture Radar	24
1.5.2 The Seasat SAR	26
1.5.3 Shuttle Imaging Radar-A (SIR-A)	27
1.5.4 Shuttle Imaging Radar-B (SIR-B)	27
1.5.5 ERS-1	27

1.5.6	JERS-1	27
1.5.7	Radarsat	28
1.5.8	Aircraft Imaging Radar Systems	28
1.6	Spatial Data Sources in General	29
1.6.1	Types of Spatial Data	29
1.6.2	Data Formats	30
1.6.3	Geographic Information Systems (GIS)	31
1.6.4	The Challenge to Image Processing and Analysis	33
1.7	A Comparison of Scales in Digital Image Data	34
	References for Chapter 1	35
	Problems	36

Chapter 2 — Error Correction and Registration of Image Data 39

2.1	Sources of Radiometric Distortion	39
2.1.1	The Effect of the Atmosphere on Radiation	39
2.1.2	Atmospheric Effects on Remote Sensing Imagery	43
2.1.3	Instrumentation Errors	43
2.2	Correction of Radiometric Distortion	44
2.2.1	Detailed Correction of Atmospheric Effects	44
2.2.2	Bulk Correction of Atmospheric Effects	46
2.2.3	Correction of Instrumentation Errors	47
2.3	Sources of Geometric Distortion	48
2.3.1	Earth Rotation Effects	49
2.3.2	Panoramic Distortion	51
2.3.3	Earth Curvature	53
2.3.4	Scan Time Skew	54
2.3.5	Variations in Platform Altitude, Velocity and Attitude	54
2.3.6	Aspect Ratio Distortion	55
2.3.7	Sensor Scan Nonlinearities	55
2.4	Correction of Geometric Distortion	56
2.4.1	Use of Mapping Polynomials for Image Correction	56
2.4.1.1	Mapping Polynomials and Ground Control Points	57
2.4.1.2	Resampling	58
2.4.1.3	Interpolation	58
2.4.1.4	Choice of Control Points	60
2.4.1.5	Example of Registration to a Map Grid	61
2.4.2	Mathematical Modelling	64
2.4.2.1	Aspect Ratio Correction	64
2.4.2.2	Earth Rotation Skew Correction	64
2.4.2.3	Image Orientation to North-South	65
2.4.2.4	Correction of Panoramic Effects	65
2.4.2.5	Combining the Corrections	65
2.5	Image Registration	66

2.5.1	Georeferencing and Geocoding	66
2.5.2	Image to Image Registration	66
2.5.3	Sequential Similarity Detection Algorithm	67
2.5.4	Example of Image to Image Registration	67
2.6	Miscellaneous Image Geometry Operations	70
2.6.1	Image Rotation	70
2.6.2	Scale Changing and Zooming	70
	References for Chapter 2	71
	Problems	71

Chapter 3 — The Interpretation of Digital Image Data 75

3.1	Two Approaches to Interpretation	75
3.2	Forms of Imagery for Photointerpretation	76
3.3	Computer Processing for Photointerpretation	79
3.4	An Introduction to Quantitative Analysis — Classification	81
3.5	Multispectral Space and Spectral Classes	82
3.6	Quantitative Analysis by Pattern Recognition	84
3.6.1	Pixel Vectors and Labelling	84
3.6.2	Unsupervised Classification	85
3.6.3	Supervised Classification	85
	References for Chapter 3	87
	Problems	87

Chapter 4 — Radiometric Enhancement Techniques 89

4.1	Introduction	89
4.1.1	Point Operations and Look Up Tables	89
4.1.2	Scalar and Vector Images	89
4.2	The Image Histogram	91
4.3	Contrast Modification in Image Data	92
4.3.1	Histogram Modification Rule	92
4.3.2	Linear Contrast Enhancement	93
4.3.3	Saturating Linear Contrast Enhancement	95
4.3.4	Automatic Contrast Enhancement	96
4.3.5	Logarithmic and Exponential Contrast Enhancement	96
4.3.6	Piecewise Linear Contrast Modification	96
4.4	Histogram Equalization	97
4.4.1	Use of the Cumulative Histogram	97
4.4.2	Anomalies in Histogram Equalization	101
4.5	Histogram Matching	102
4.5.1	Principle of Histogram Matching	102

4.5.2	Image to Image Contrast Matching	103
4.5.3	Matching to a Mathematical Reference	104
4.6	Density Slicing	106
4.6.1	Black and White Density Slicing	106
4.6.2	Colour Density Slicing and Pseudocolouring	107
	References for Chapter 4	109
	Problems	110

Chapter 5 — Geometric Enhancement Using Image Domain Techniques 113

5.1	Neighbourhood Operations	113
5.2	Template Operators	113
5.3	Geometric Enhancement as a Convolution Operation	114
5.4	Image Domain Versus Fourier Transformation Approaches	117
5.5	Image Smoothing (Low Pass Filtering)	118
5.5.1	Mean Value Smoothing	118
5.5.2	Median Filtering	121
5.6	Edge Detection and Enhancement	122
5.6.1	Linear Edge Detecting Templates	123
5.6.2	Spatial Derivative Techniques	124
5.6.2.1	The Roberts Operator	124
5.6.2.2	The Sobel Operator	125
5.6.3	Thinning, Linking and Edge Responses	125
5.6.4	Edge Enhancement by Subtractive Smoothing	126
5.7	Line Detection	129
5.7.1	Linear Line Detecting Templates	129
5.7.2	Non-linear and Semi-linear Line Detecting Templates	129
5.8	General Convolution Filtering	130
5.9	Shape Detection	130
	References for Chapter 5	131
	Problems	132

Chapter 6 — Multispectral Transformations of Image Data 133

6.1	The Principal Components Transformation	133
6.1.1	The Mean Vector and Covariance Matrix	133
6.1.2	A Zero Correlation, Rotational Transform	136
6.1.3	An Example — Some Practical Considerations	142
6.1.4	The Effect of an Origin Shift	144

6.1.5	Application of Principal Components in Image Enhancement and Display	144
6.1.6	The Taylor Method of Contrast Enhancement	145
6.1.7	Other Applications of Principal Components Analysis	148
6.2	The Kauth-Thomas Tasseled Cap Transformation	148
6.3	Image Arithmetic, Band Ratios and Vegetation Indices	152
	References for Chapter 6	152
	Problems	153

Chapter 7 — Fourier Transformation of Image Data 155

7.1	Introduction	155
7.2	Special Functions	155
7.2.1	The Complex Exponential Function	155
7.2.2	The Dirac Delta Function	156
7.2.2.1	Properties of the Delta Function	157
7.2.3	The Heaviside Step Function	157
7.3	Fourier Series	158
7.4	The Fourier Transform	159
7.5	Convolution	160
7.5.1	The Convolution Integral	160
7.5.2	Convolution with an Impulse	162
7.5.3	The Convolution Theorem	162
7.6	Sampling Theory	162
7.7	The Discrete Fourier Transform	165
7.7.1	The Discrete Spectrum	165
7.7.2	Discrete Fourier Transform Formulae	166
7.7.3	Properties of the Discrete Fourier Transform	167
7.7.4	Computation of the Discrete Fourier Transform	168
7.7.5	Development of the Fast Fourier Transform Algorithm	168
7.7.6	Computational Cost of the Fast Fourier Transform	171
7.7.7	Bit Shuffling and Storage Considerations	172
7.8	The Discrete Fourier Transform of an Image	173
7.8.1	Definition	173
7.8.2	Evaluation of the Two Dimensional, Discrete Fourier Transform	173
7.8.3	The Concept of Spatial Frequency	174
7.8.4	Image Filtering for Geometric Enhancement	176
7.8.5	Convolution in Two Dimensions	176
7.9	Concluding Remarks	177
	References for Chapter 7	178
	Problems	179

Chapter 8 — Supervised Classification Techniques 181

Part I. Standard Classification Algorithms 181

8.1	Steps in Supervised Classification	181
8.2	Maximum Likelihood Classification	182
8.2.1	Bayes' Classification	182
8.2.2	The Maximum Likelihood Decision Rule	183
8.2.3	Multivariate Normal Class Models	184
8.2.4	Decision Surfaces	184
8.2.5	Thresholds	185
8.2.6	Number of Training Pixels Required for Each Class	187
8.2.7	A Simple Illustration	187
8.3	Minimum Distance Classification	189
8.3.1	The Case of Limited Training Data	189
8.3.2	The Discriminant Function	189
8.3.3	Degeneration of Maximum Likelihood to Minimum Distance Classification	190
8.3.4	Decision Surfaces	191
8.3.5	Thresholds	192
8.4	Parallelepiped Classification	192
8.5	Classification Time Comparison of the Classifiers	193
8.6	The Mahalanobis Classifier	194
8.7	Table Look Up Classification	194

Part II. More Advanced Considerations 195

8.8	Context Classification	195
8.8.1	The Concept of Spatial Context	195
8.8.2	Context Classification by Image Pre-Processing	195
8.8.3	Post Classification Filtering	196
8.8.4	Probabilistic Label Relaxation	196
8.8.4.1	The Basic Algorithm	196
8.8.4.2	The Neighbourhood Function	198
8.8.4.3	Determining the Compatibility Coefficients	199
8.8.4.4	The Final Step — Stopping the Process	199
8.8.4.5	Examples	200
8.9	Classification of Mixed Image Data	201
8.9.1	The Stacked Vector Approach	201
8.9.2	Statistical Methods	203
8.9.3	The Theory of Evidence	203
8.9.3.1	The Concept of Evidential Mass	203
8.9.3.2	Combining Evidence — the Orthogonal Sum	205

- 8.9.3.3 Decision Rule 206
- 8.10 Classification Using Neural Networks 207
- 8.10.1 Linear Discrimination 207
- 8.10.1.1 Concept of a Weight Vector 207
- 8.10.1.2 Testing Class Membership 208
- 8.10.1.3 Training 208
- 8.10.1.4 Setting the Correction Increment 211
- 8.10.1.5 Classification — The Threshold Logic Unit 211
- 8.10.1.6 Multicategory Classification 211
- 8.10.2 Networks of Classifiers — Solutions of Nonlinear Problems 213
- 8.10.3 The Neural Network Approach 214
- 8.10.3.1 The Processing Element 214
- 8.10.3.2 Training the Neural Network — Backpropagation 215
- 8.10.3.3 Choosing the Network Parameters 219
- 8.10.3.4 Examples 219
- References for Chapter 8 224
- Problems 226

Chapter 9 — Clustering and Unsupervised Classification 229

- 9.1 Delineation of Spectral Classes 229
- 9.2 Similarity Metrics and Clustering Criteria 229
- 9.3 The Iterative Optimization (Migrating Means) Clustering Algorithm 231
- 9.3.1 The Basic Algorithm 231
- 9.3.2 Mergings and Deletions 233
- 9.3.3 Splitting Elongated Clusters 233
- 9.3.4 Choice of Initial Cluster Centres 233
- 9.3.5 Clustering Cost 234
- 9.4 Unsupervised Classification and Cluster Maps 234
- 9.5 A Clustering Example 234
- 9.6 A Single Pass Clustering Technique 236
- 9.6.1 Single Pass Algorithm 236
- 9.6.2 Advantages and Limitations 237
- 9.6.3 Strip Generation Parameter 238
- 9.6.4 Variations on the Single Pass Algorithm 238
- 9.6.5 An Example 238
- 9.7 Agglomerative Hierarchical Clustering 239
- 9.8 Clustering by Histogram Peak Selection 241
- References for Chapter 9 243
- Problems 243

Chapter 10 — Feature Reduction	245
10.1 Feature Reduction and Separability	245
10.2 Separability Measures for Multivariate Normal Spectral Class Models	245
10.2.1 Distribution Overlaps	245
10.2.2 Divergence	246
10.2.2.1 A General Expression	246
10.2.2.2 Divergence of a Pair of Normal Distributions	248
10.2.2.3 Use of Divergence for Feature Selection	248
10.2.2.4 A Problem with Divergence	249
10.2.3 The Jeffries-Matusita (JM) Distance	250
10.2.3.1 Definition	250
10.2.3.2 Comparison of Divergence and JM Distance	251
10.2.4 Transformed Divergence	251
10.2.4.1 Definition	251
10.2.4.2 Relation between Transformed Divergence and Probability of Correct Classification	252
10.2.4.3 Use of Transformed Divergence in Clustering	253
10.3 Separability Measures for Minimum Distance Classification	253
10.4 Feature Reduction by Data Transformation	253
10.4.1 Feature Reduction Using the Principal Components Transformation	253
10.4.2 Canonical Analysis as a Feature Selection Procedure	255
10.4.2.1 Within Class and Among Class Covariance Matrices	256
10.4.2.2 A Separability Measure	257
10.4.2.3 The Generalised Eigenvalue Equation	258
10.4.2.4 An Example	259
10.4.3 Arithmetic Transformations	261
References for Chapter 10	262
Problems	262
 Chapter 11 — Image Classification Methodologies	 265
11.1 Introduction	265
11.2 Supervised Classification	265
11.2.1 Outline	265
11.2.2 Determination of Training Data	266
11.2.3 Feature Selection	266
11.2.4 Detecting Multimodal Distributions	267
11.2.5 Presentation of Results	267
11.2.6 Effect of Resampling on Classification	268
11.3 Unsupervised Classification	268
11.3.1 Outline, and Comparison with Supervised Methods	268

11.3.2	Feature Selection	270
11.4	A Hybrid Supervised/Unsupervised Methodology	270
11.4.1	The Essential Steps	270
11.4.2	Choice of the Clustering Regions	271
11.4.3	Rationalisation of the Number of Spectral Classes	271
11.5	Assessment of Classification Accuracy	271
11.6	Case Study 1: Irrigated Area Determination	276
11.6.1	Background	276
11.6.2	The CSIRO-ORSER Image Analysis Software	276
11.6.3	The Study Region	276
11.6.4	Clustering	277
11.6.5	Signature Generation	280
11.6.6	Classification and Results	280
11.6.7	Concluding Remarks	280
11.7	Case Study 2: Multitemporal Monitoring of Bush Fires	282
11.7.1	Background	282
11.7.2	Simple Illustration of the Technique	282
11.7.3	The Study Area	284
11.7.4	Registration	284
11.7.5	Principal Components Transformation	285
11.7.6	Classification of Principal Components Imagery	287
	References for Chapter 11	289
	Problems	290

Chapter 12 — Knowledge-Based Image Analysis 293

12.1	Introduction	293
12.2	Knowledge Processing: Emulating Photointerpretation	294
12.3	Fundamentals of a Knowledge-Based Image Analysis System	295
12.3.1	Structure	295
12.3.2	Representation of Knowledge: Rules	296
12.3.3	The Inference Mechanism	297
12.4	Handling Multisource and Multisensor Data	298
12.5	An Example	300
12.5.1	Background	300
12.5.2	Rules as Justifiers for a Labelling Proposition	301
12.5.3	Endorsement of a Labelling Proposition	302
12.5.4	Knowledge Base and Results	303
	References for Chapter 12	305
	Problems	306

Appendix A — Satellite Altitudes and Periods 307

	References for Appendix A	308
--	---------------------------	-----

Appendix B — Binary Representation of Decimal Numbers	309
Appendix C — Essential Results from Vector and Matrix Algebra	311
C.1 Definition of a Vector and a Matrix	311
C.2 Properties of Matrices	313
C.3 Multiplication, Addition and Subtraction of Matrices	314
C.4 The Eigenvalues and Eigenvectors of a Matrix	314
C.5 Some Important Matrix, Vector Operations	315
C.6 An Orthogonal Matrix — the Concept of Matrix Transpose	315
C.7 Diagonalisation of a Matrix	315
References for Appendix C	316
Appendix D — Some Fundamental Material from Probability and Statistics	317
D.1 Conditional Probability	317
D.2 The Normal Probability Distribution	318
D.2.1 The Univariate Case	318
D.2.2 The Multivariate Case	318
References for Appendix D	319
Appendix E — Penalty Function Derivation of the Maximum Likelihood Decision Rule	321
E.1 Loss Functions and Conditional Average Loss	321
E.2 A Particular Loss Function	322
References for Appendix E	323
Appendix F — Real Time Image Processing in Interactive Image Display Systems	325
F.1 Introduction	325
F.2 The Use of Look Up Tables	327
F.3 Point Processing: The Use of Pipelines	328
F.4 The Use of Feedback and Feedback Processing	330
F.5 Neighbourhood Operations	331
F.6 Limitations with Display Sub-System Processing	332
References for Appendix F	333
Subject Index	335
