LIST OF FIGURES	xi
LIST OF TABLES	xv
LIST OF ABBREVIATIONS	xvi

Part 1: An overview of signalling **1**

1 Aspects of cellular signalling **3**

1.1 Introduction	3
1.2 The main principles of cell signalling	5
1.3 What makes a good signal?	7
1.4 Different ways in which cells signal to each other	9
1.5 Amplification and physical architectures	16
1.6 Coordination of signalling	18
1.7 Domains and modules	21
1.8 Oncogenes	25
Summary	26
Further reading	27

2 Pathways are the key to signalling **29**

2.1 Introduction	29
2.2 Simplified examples of signalling pathways	31
Summary	37
Further reading	37

3 A look at some of the history and techniques of cell signalling **38**

3.1 A brief history	38
3.2 A brief look at some techniques	42
Summary	50
Further reading	50

Part 2: Components that comprise signalling pathways **53**

4 Extracellular signals: hormones, cytokines and growth factors **55**

4.1 Introduction	56
4.2 Hormones	56
4.3 Plant hormones	62
4.4 Cytokines	65
4.5 Growth factors	71
4.6 Neurotransmitters	73

4.7	ATP as an extracellular signal	74
4.8	Pheromones	75
	Summary	76
	Further reading	76
5	Detection of extracellular signals: the role of receptors	78
5.1	Introduction	79
5.2	Types of receptors	80
5.3	Ligand binding to their receptors	92
5.4	Receptor sensitivity and receptor density	96
	Summary	101
	Further reading	102
6	Protein phosphorylation, kinases and phosphatases	104
6.1	Introduction	105
6.2	Serine/threonine kinases	110
6.3	Tyrosine kinases	127
6.4	Mitogen-activated protein kinases	130
6.5	Histidine phosphorylation	135
6.6	Phosphatases	137
6.7	Other covalent modifications	141
6.8	Ubiquitin-proteasome system	142
	Summary	145
	Further reading	147
7	Cyclic nucleotides, cyclases and G proteins	150
7.1	Introduction	151
7.2	cAMP	151
7.3	Adenylyl cyclase	154
7.4	Adenylyl cyclase control and the role of G proteins	156
7.5	Other roles of the heterotrimeric G proteins	164
7.6	Guanylyl cyclase	165
7.7	Phosphodiesterases	168
7.8	Compartmentalization of nucleotide signalling	172
7.9	The GTPase superfamily: functions of monomeric G proteins	173
	Summary	181
	Further reading	182
8	Inositol phosphate metabolism and roles of membrane lipids	184
8.1	Introduction	184
8.2	Events at the membrane	186
8.3	The breakdown of the inositol phosphate lipids	189

8.4	Inositol 1,4,5-trisphosphate and its fate	192
8.5	The role of diacylglycerol	198
8.6	Inositol phosphate metabolism at the nucleus	198
8.7	Other lipids involved in signalling	199
8.8	Related lipid derived signalling molecules	206
	Summary	207
	Further reading	208
9	Intracellular calcium: its control and role as an intracellular signal	210
9.1	Introduction	211
9.2	Calmodulin	216
9.3	The plasma membrane and its role in calcium concentration maintenance	219
9.4	Intracellular stores	221
9.5	Gradients, waves and oscillations	229
9.6	Sphingosine-1-phosphate	235
9.7	Cyclic ADP-ribose	236
9.8	Nicotinate adenine-dinucleotide phosphate	237
9.9	Fluorescence detection and confocal microscopy	237
	Summary	239
	Further reading	240
10	Reactive oxygen species, reactive nitrogen species and redox signalling	243
10.1	Introduction	243
10.2	Nitric oxide	245
10.3	Reactive oxygen species: superoxide and hydrogen peroxide	252
10.4	Redox signalling and molecular mechanisms of hydrogen peroxide signalling	258
10.5	Measuring ROS and RNS	261
10.6	Carbon monoxide and other compounds	262
	Summary	262
	Further reading	263
Part 3:	Selected examples of signalling pathways and events	265
11	Insulin and the signal transduction cascades it invokes	267
11.1	The insulin signalling system	267
	Summary	278
	Further reading	279
12	Perception of the environment	281
12.1	Introduction	281

12.2	Photodetection in the eye	282
12.3	Other environment perception systems	289
	Summary	291
	Further reading	291
13	Signalling in development and for the regulation of gene expression	293
13.1	Introduction	294
13.2	Transcription factors	295
13.3	Transforming growth factor β	299
13.4	Notch receptor signalling	301
13.5	Hedgehog signalling	303
13.6	Wnt signalling	306
13.7	Toll-like receptor signalling	308
	Summary	311
	Further reading	311
14	Life, death and apoptosis	314
14.1	Introduction	314
14.2	An overview of apoptosis	315
14.3	Caspases	316
14.4	The intrinsic pathway	318
14.5	The extrinsic pathway	321
	Summary	325
	Further reading	325
Part 4:	Final thoughts	327
15	Cell signalling: importance, complexity and the future	329
15.1	Introduction	329
15.2	Specificity, subtlety and crosstalk	330
15.3	Longer term effects	331
15.4	The future	332
	Further reading	333
