

## *Contents*

<i>Preface</i> . . . . .	v
1 INTRODUCTION . . . . .	1
I. The Nature of Our Air Environment . . . . .	1
II. Which Air Pollutants Affect Plant Ecosystems? . . . . .	3
A. Stationary Combustion Sources . . . . .	5
B. Mobile Combustion Sources . . . . .	7
C. Other Pollutant Sources. . . . .	9
III. Summary . . . . .	10
2 SYMPTOMS OF AIR POLLUTION INJURY . . . . .	11
I. Introduction . . . . .	11
II. Major Pollutants . . . . .	11
A. Photochemical Oxidants . . . . .	11
1. Ozone. . . . .	12
2. Peroxyacyl nitrates . . . . .	17
3. Oxides of nitrogen . . . . .	18
B. Sulfur Dioxide . . . . .	19
C. Fluorides. . . . .	22
III. Minor Pollutants . . . . .	24
A. Ammonia . . . . .	24
B. Boron. . . . .	25
C. Chlorine . . . . .	25
D. Ethylene and Propylene. . . . .	26
E. Hydrogen Chloride and Hydrochloric Acid . . . . .	26
F. Particulates and Heavy Metals . . . . .	27
G. Sodium Sulfate. . . . .	29
IV. Pollutant Combinations . . . . .	29
A. Ozone and Sulfur Dioxide . . . . .	29

	B. Ozone and Peroxyacetyl Nitrate . . . . .	30
	C. Sulfur Dioxide and Nitrogen Dioxide . . . . .	30
	V. Diagnosing Air Pollution Injury . . . . .	30
3	PLANTS AS INDICATORS AND BIOMONITORS . . . . .	36
	I. Introduction . . . . .	36
	II. Relating Plant Responses to Pollutant Concentrations. . . . .	39
	III. Selecting Plant Material . . . . .	40
	IV. Evaluating Plant Responses. . . . .	40
4	BIOMONITORING PHOTOCHEMICAL OXIDANTS . . . . .	47
	I. Introduction . . . . .	47
	II. Biomonitoring Systems for Oxidants. . . . .	48
	III. Selection of Plant Material . . . . .	49
	IV. Biomonitoring Ozone. . . . .	49
	A. Tobacco . . . . .	49
	1. Growing plants . . . . .	51
	2. Collection and handling of data . . . . .	53
	B. Bean . . . . .	55
	C. Grapes . . . . .	56
	D. White Pine . . . . .	57
	V. Biomonitoring PAN . . . . .	60
	VI. Biomonitoring Nitrogen Oxides . . . . .	61
	VII. Comparative Advantages and Disadvantages of Using Plants to Biomonitor Oxidants . . . . .	62
5	BIOMONITORING SULFUR DIOXIDE . . . . .	71
	I. Introduction . . . . .	71
	II. Diagnosing Injury on Higher Plants . . . . .	71
	A. Symptoms . . . . .	74
	B. Chemical Analyses . . . . .	75
	III. Biomonitoring SO <sub>2</sub> with Higher Plants . . . . .	76
	A. Eastern White Pine . . . . .	76
	1. Chlorotic dwarf syndrome . . . . .	76
	2. Long-term volume growth loss . . . . .	76
	B. Scots Pine . . . . .	77
	C. Hybrid Poplar . . . . .	77
	D. Vegetation Analyses Near Sources . . . . .	77
	1. Sulfate analyses of leaves . . . . .	77
	2. Tree bark acidity . . . . .	78
	3. Species richness and diversity . . . . .	78

IV. Biomonitoring SO <sub>2</sub> with Lower Plants . . . . .	79
A. Mosses and Lichens . . . . .	79
1. Mapping studies . . . . .	81
2. Transplant studies . . . . .	85
B. Microorganisms . . . . .	88
1. Field observations of plant diseases . . . . .	88
2. Mapping tar spot of maple . . . . .	89
3. Incidence of airborne bacteria . . . . .	90
6 BIOMONITORING HYDROGEN FLUORIDE . . . . .	94
I. Introduction . . . . .	94
II. Evaluating Fluoride Injury . . . . .	94
A. Symptoms . . . . .	94
B. Chemical Analyses . . . . .	98
III. Biomonitoring Fluoride with Higher Plants . . . . .	99
A. Chinese Apricot . . . . .	99
B. Conifers . . . . .	100
1. Douglas fir . . . . .	100
2. Ponderosa pine . . . . .	102
C. Gladiolus and Freesia . . . . .	103
1. Gladiolus . . . . .	103
2. Freesia . . . . .	106
IV. Biomonitoring Fluoride with Lower Plants . . . . .	107
A. Lichens . . . . .	107
7 BIOMONITORING HEAVY METALS AND DUSTS . . . . .	110
I. Introduction . . . . .	110
II. Physical and Chemical Analyses . . . . .	110
A. Physical Analyses . . . . .	110
B. Chemical Analyses . . . . .	111
III. Biomonitoring with Higher Plants . . . . .	112
A. Heavy Metals . . . . .	112
B. Dusts . . . . .	112
IV. Biomonitoring with Lower Plants. . . . .	114
A. Heavy Metals . . . . .	114
1. Mosses . . . . .	115
2. Mosses and lichens compared. . . . .	117
3. Lichens . . . . .	121
4. Spanish moss . . . . .	121
5. Puffball fungus. . . . .	121

	B. Dusts . . . . .	121
	1. Lichens . . . . .	121
	2. Plant disease incidence . . . . .	121
8	BIOMONITORING ETHYLENE . . . . .	125
	I. Introduction . . . . .	125
	II. Possible Biomonitors . . . . .	126
	A. Orchid . . . . .	126
	B. Carnation . . . . .	127
	C. Cucumber . . . . .	128
	D. Tomato and Marigold . . . . .	129
	E. Honey Locust . . . . .	130
9	BIOMONITORING AIR POLLUTANTS WITH PLANTS:	
	FUTURE DIRECTIONS . . . . .	131
	I. Introduction . . . . .	131
	II. Need for More and Better Biomonitors. . . . .	131
	A. Better Genetic Definition in Biomonitors . . . . .	131
	B. Herbaceous versus Perennial Biomonitors. . . . .	131
	C. Central Sources of Biomonitors . . . . .	132
	D. Specific Pollutants . . . . .	132
	1. Oxidants . . . . .	132
	2. Sulfur dioxide . . . . .	132
	3. Hydrogen fluoride . . . . .	133
	4. Ethylene . . . . .	133
	5. Heavy metals . . . . .	133
	III. Plant Biomonitors and Air Quality Standards . . . . .	133
	A. Relationship of Plant Responses to Ambient Pollutant Concentrations . . . . .	133
	B. Relationship of Plant Responses to Human Health . . . . .	134
	<i>Index</i> . . . . .	137
