Preface	xxiii
Chapter 1 History of Biological Invasions with Special Emphasis on the Old World	1
<i>Francesco di Castri</i>	
1.1 Introduction	1
1.2 The relevance of an historical background to understanding trends and patterns of biological invasions	3
1.3 Peculiarities of the Old World as related to the invasion potential of its species	7
1.4 Biological invasions into Old World ecosystems	13
1.5 Human-history driving forces in the Old World as related to biological invasions	17
1.6 Conclusions	26
Chapter 2 Patterns, Extents and Modes of Invasions by Terrestrial Plants	31
<i>Vernon H. Heywood</i>	
2.1 Introduction	31
2.2 Taxonomic patterns: names and numbers	33
2.3 The extent of invasions	40
2.3.1 North temperate regions	41
2.3.2 Mediterranean-climate regions	42
2.3.3 Grasslands and pastures	43
2.3.4 Tropical forests	44
2.3.5 A pattern of islands	45
2.4 Modes of invasions	46
2.4.1 The early historical and aboriginal phases	47
2.4.2 The European/colonial phase	48
2.4.3 The role of the botanic gardens	49
2.4.4 Recent changes in the spread and decline of invaders	51
2.5 Summary and conclusions	51

Chapter 3	Which Insect Introductions Succeed and Which Fail?	61
	<i>Daniel Simberloff</i>	
3.1	Introduction	61
3.2	Opportunity for colonization	63
3.3	Suitable habitat	65
3.4	The biotic resistance hypothesis	66
3.5	Biological traits favoring successful introduction	68
3.6	Conclusions	72
Chapter 4	Invasions of Natural Ecosystems by Plant Pathogens	77
	<i>Sharon L. von Broembsen</i>	
4.1	Introduction	77
4.2	Successful invasions	77
4.2.1	Chestnut blight	77
4.2.2	White pine blister rust	78
4.2.3	Dutch elm disease	78
4.2.4	Pine wilt disease	79
4.2.5	<i>Phytophthora</i> root disease	79
4.3	Patterns and modes of invasions	80
4.3.1	The invaders	80
4.3.2	The invaded ecosystems	81
4.3.3	The human role	81
4.4	Conclusions	82
Chapter 5	Patterns, Modes and Extents of Invasions by Vertebrates	85
	<i>James H. Brown</i>	
5.1	Introduction	85
5.2	General patterns and processes	86
5.2.1	Patterns of successful invasion	86
5.2.2	Modes and extents of invasion	99
5.3	Can invasion biology be made a predictive science?	102
5.3.1	A thought experiment with Andean sparrows	102
5.3.2	History, uniqueness, and predictability	103
5.3.3	Applications to specific problems	104
5.4	The place of exotics in a disturbed biosphere	105
Chapter 6	Aquatic Plants: Patterns and Modes of Invasion, Attributes of Invading Species and Assessment of Control Programmes	111
	<i>Peter J. Ashton and David S. Mitchell</i>	
6.1	Introduction	111
6.2	The invasion process	112
6.2.1	Natural invasions	112
6.2.2	Transport mechanisms	114
6.2.3	Human travel	116

6.2.4	Invasion stages	117
6.2.5	Why are some invasions successful while others are not?	121
6.2.6	Why are some environments vulnerable while others are not?	123
6.3	Attributes of invading species	124
6.3.1	Life forms and growth characteristics	124
6.3.2	Morphological plasticity and the importance of rapid vegetative growth	127
6.3.3	Responses to environmental cues	129
6.3.4	Competitive ability in the 'struggle for dominance'	129
6.3.5	Survival during unfavourable periods	130
6.3.6	Mechanisms facilitating intra- and inter-system transfer	132
6.3.7	The 'perfect invader'—does it exist?	133
6.4	The management of invasive aquatic plants	133
6.4.1	Available options	134
6.4.2	Eradication versus control and the costs of inaction	136
6.4.3	Successful control programmes—why did they succeed?	137
6.4.4	Unsuccessful control programmes—why did they fail?	141
6.4.5	Can programme success be predicted?	144
6.4.6	The role of legislation	145
6.4.7	Integrated control strategies	146
6.5	Conclusions	147
Chapter 7	Temperate Grasslands Vulnerable to Plant Invasions: Characteristics and Consequences	155
	<i>Richard N. Mack</i>	
7.1	Introduction	155
7.2	Temperate grasslands vulnerable to plant invasion: the characteristics	156
7.2.1	The lack of large, hooved, congregating mammals	157
7.2.2	The dominance of caespitose grasses	157
7.3	Temperate grasslands vulnerable to invasion: the consequences	159
7.3.1	The temperate grasslands of South America	160
7.3.1.1	The invasion of 'European cardoon and a tall thistle'	160
7.3.1.2	Farming brings new invasions	161
7.3.2	Grasslands in the Intermountain West of North America	163
7.3.3	Grasslands in the Central Valley of California	164
7.3.4	Australian temperate grasslands	167
7.4	New potential hazards	170
7.5	Summary and conclusions	173
Chapter 8	The Characteristics of Invaded Mediterranean-climate Regions	181
	<i>Fred. J. Kruger, G. J. Breytenbach, Ian A. W. Macdonald, and D. M. Richardson</i>	
8.1	Introduction	181
8.2	Patterns of invasion in different mediterranean ecosystems	181
8.2.1	Degrees and patterns of invasion in the different regions	181

8.2.2	Invasive floras: correspondences and divergences in different regions	185
8.3	Historical and cultural factors	189
8.4	Environmental correlates with patterns of invasion	193
8.4.1	Climate	193
8.4.2	Nutritional status of soils	197
8.5	Biotic correlates	199
8.5.1	Biotic interactions in plant invasions	199
8.5.2	Biotic interactions in the invasion by introduced mammals	200
8.5.3	Linked invasions	202
8.5.4	Disturbance regimes	202
8.5	Conclusions	204

Chapter 9	Wildlife Conservation and the Invasion of Nature Reserves by Introduced Species: a Global Perspective	215
	<i>Ian A. W. Macdonald, Lloyd L. Loope, Michael B. Usher, and O. Hamann</i>	
9.1	Introduction	215
9.2	The extent of the invasion of nature reserves by introduced species	217
9.3	Some effects of introduced species on ecosystem function in nature reserves	224
9.3.1	Acceleration of soil erosion rates	224
9.3.2	Alteration of other geomorphological processes	224
9.3.3	Alteration of biogeochemical cycling	226
9.3.4	Alteration of hydrological cycles	226
9.3.5	Alteration of fire regimes	227
9.3.6	Prevention of recruitment of native species	228
9.3.7	Concluding comment on the effect of invaders on ecosystem function	230
9.4	Some effects of alien species on ecosystem structure in nature reserves	231
9.4.1	Acceleration of local and global extinction rates	231
9.4.1.1	Extinction of oceanic island birds	234
9.4.1.2	Other island extinctions	235
9.4.1.3	Extinctions in continental ecosystems	236
9.4.1.4	Continental nature reserves—the significance of introduced plant pathogens	238
9.4.1.5	Continental nature reserves—the significance of introduced insect herbivores	238
9.4.1.6	Future risks, arising through 'trophic cascades'	239
9.4.2	Genetic effects of introduced species	240
9.5	Control of invaders in nature reserves	242
9.5.1	Controlling plant invaders	242
9.5.2	Controlling introduced animals in nature reserves	244
9.6	Summary and conclusions	245

Chapter 10	Characteristics of Invaded Islands, with Special Reference to Hawaii	257
	<i>Lloyd L. Loope and Dieter Mueller-Dombois</i>	
10.1	Introduction	257
10.2	Characteristics of islands: an overview	257
10.3	Characteristics and invasions of the Hawaiian Islands	260
10.4	Why do invaders of island ecosystems have such a high rate of success?	262
	10.4.1 Evolution of island organisms in isolation	262
	10.4.2 Modification of island environments by humans	265
	10.4.3 Invasibility of island ecosystems	266
	10.4.4 Reduced aggressiveness and vulnerability to extinction of island biotas	268
10.5	Island invasions and conservation	273
10.6	Summary and conclusions	274
Chapter 11	Ecosystem-level Processes and the Consequences of Biological Invasions	281
	<i>P. S. Ramakrishnan and Peter M. Vitousek</i>	
11.1	Introduction	281
11.2	Invasions of intact ecosystems	282
11.3	Invasions of primary succession	283
11.4	Invasions of secondary succession	284
11.5	Invasions and shifting cultivation—a case study	284
	11.5.1 Shifting agriculture and secondary succession	285
	11.5.2 Weed potential under shifting agriculture	286
11.6	Adaptive strategies of natives versus exotics: system-level consequences	287
	11.6.1 Allocation and establishment	287
	11.6.2 C ₃ /C ₄ strategy and microdistribution	291
	11.6.3 Nutrient conservation by exotic species	293
	11.6.4 Weed extinction	294
11.7	Conclusion	296
Chapter 12	Attributes of Invaders and the Invading Process: Terrestrial and Vascular Plants	301
	<i>Ian R. Noble</i>	
12.1	Introduction	301
12.2	The ideal invader	302
12.3	Plant strategies	303
12.4	Functional groups	304
12.5	Summary and conclusions	310
Chapter 13	Attributes of Invaders and the Invading Processes: Vertebrates	315
	<i>Paul R. Ehrlich</i>	
13.1	Introduction	315
13.2	What is an invader?	315

13.3	Paired comparisons	316
13.4	Are some species just naturally good colonizers	317
13.5	Characteristics of good invaders	318
13.6	Size of the introduction: frequency of attempts	321
13.7	Invasibility	322
13.8	What controls the success of invasions?	324
13.9	Conclusions	325
Chapter 14	Mathematical Models of Invasion	329
	<i>Mark Williamson</i>	
14.1	Introduction	329
14.2	Arrival and establishment	330
	14.2.1 Minimum viable population size	331
	14.2.2 The parameters of establishment	332
	14.2.3 Models of epidemics	337
14.3	Spread	338
14.4	Models of equilibrium state	340
	14.4.1 The number of parameters	340
	14.4.2 Simplified models of communities	341
	14.4.3 Food webs	343
14.5	Conclusions	345
Chapter 15	Theories of Predicting Success and Impact of Introduced Species	351
	<i>Stuart L. Pimm</i>	
15.1	Introduction	351
15.2	The problems of small populations	351
	15.2.1 Theory	352
	15.2.2 Empirical tests 1: island birds	353
	15.2.3 Empirical tests 2: island insects	354
	15.2.4 Empirical tests 3: Hawaiian vertebrates	354
15.3	Community structure and chance of invasion	355
	15.3.1 Models of community assembly	355
	15.3.2 Details of community resistance	358
	15.3.2.1 Competitors	358
	15.3.2.2 Predators	358
	15.3.3 Empirical studies 1: the role of competition	359
	15.3.3.1 Hawaiian birds	359
	15.3.3.2 The application to other taxa	360
	15.3.4 Empirical studies 2: the role of predation	360
	15.3.5 Empirical studies 3: community assembly	361
15.4	What determines the impact of an introduced species?	362
15.5	Can we anticipate the effect of an introduced species?	363
15.6	Conclusions	365
Chapter 16	Invasibility of Plant Communities	369
	<i>Marcel Rejmánek</i>	
16.1	Introduction	369
16.2	Species richness versus invasibility	370
16.3	Invaders in successional series	370
16.4	Invaders along moisture gradients	373

16.5	Invaders in 'undisturbed' communities	376
16.6	The role of disturbance	381
16.7	Conclusions	383

**Chapter 17 The Nature and Effects of Disturbance Relative to
Invasions 389**
Richard J. Hobbs

17.1	Introduction	389
17.2	Disturbance and patch dynamics	389
17.3	Disturbance, resources and invasibility	390
	17.3.1 Background to experiments	390
	17.3.2 Communities studied	391
	17.3.3 Experimental procedure	392
	17.3.4 Results and discussion	393
	17.3.5 Other species	396
	17.3.6 Interpretation	398
17.4	Comparison with other systems	400
17.5	Summary and conclusions	401

Chapter 18 Chance and Timing in Biological Invasions 407
Michael J. Crawley

18.1	Introduction	407
	18.1.1 Intrinsic rate of increase	407
	18.1.2 Exploitation competition	408
	18.1.3 Interference competition	408
	18.1.4 Natural enemies	408
	18.1.5 Mutualisms	408
	18.1.6 Refuges	409
18.2	Chance	409
	18.2.1 Buffering mechanisms exhibited by plants	412
	18.2.2 Buffering mechanisms exhibited by animals	413
18.3	Data on chance in invasions	414
	18.3.1 Chance in the weed biocontrol data	414
	18.3.2 Number of releases	414
	18.3.3 Previous experience	415
	18.3.4 Taxonomic mistakes	415
	18.3.5 Total effort	416
	18.3.6 Spatial distribution of eggs	416
	18.3.7 Adult longevity	416
	18.3.8 Failure to establish	417
18.4	Timing	417
	18.4.1 Seasonal phenology	417
	18.4.2 Timing in the Broadbalk experiment	418
	18.4.3 Successional timing	419
18.5	Conclusions	420

**Chapter 19 Analysis of Risk for Invasions and Control
Programs 425**
Simon A. Levin

19.1	Introduction	425
19.2	Risk assessment and risk management	426

19.3	Spread of propagules and individuals	427
19.4	Integrative models of population growth and spread	429
19.5	Ecological effects	431
19.6	Conclusions	432
Chapter 20	Ecological Control of Invasive Terrestrial Plants . . .	437
	<i>Richard H. Groves</i>	
20.1	Introduction	437
20.2	Methods of control	437
20.3	Some examples of ecological control	442
20.3.1	Control of <i>Hypericum perforatum</i>	442
20.3.2	Control of <i>Eupatorium</i> spp.	447
20.3.3	Control of <i>Acacia longifolia</i> and <i>Chrysanthemoides monilifera</i>	453
20.4	Summary and conclusions	456
Chapter 21	Ecological Effects of Controlling Invasive Terrestrial Vertebrates	463
	<i>Michael B. Usher</i>	
21.1	Introduction	463
21.1.1	The perception of the problem	463
21.1.2	The scope of this paper	464
21.1.3	The frequency of control measures	465
21.2	The invasive species	466
21.2.1	How is the invasive species' ecology affected by control?	467
21.2.2	Are there genetical effects?	467
21.3	The invaded community	469
21.3.1	Does control affect rare and endangered species?	469
21.3.2	Does the community recover?	472
21.3.3	Are there relationships with other introduced species?	474
21.3.4	Are there undesirable side-effects?	476
21.4	Prognoses for the future	477
21.4.1	Is control possible?	477
21.4.2	Is modelling helpful?	480
21.4.3	How is success measured?	481
21.4.4	Are control and conservation compatible?	482
21.4.5	Does control increase or decrease genetic diversity?	483
21.5	Conclusion	484
21.6	Summary	484
Chapter 22	Biological Invasions: a SCOPE Program Overview	491
	<i>H. A. Mooney and J. A. Drake</i>	
22.1	Introduction	491
22.2	How many invaders are there?	491
22.2.1	Invasions into nature reserves	492
22.2.2	Invasions on islands	492
22.3	Who are the invaders?	493
22.3.1	Functional groups	493
22.3.2	Taxonomic groups	494

22.4 How do they get there? 494

22.5 Where do they come from? 495

22.6 How do they get established? 495

 22.6.1 The minimum viable population 496

 22.6.2 Higher-order effects 496

22.7 How fast do they move? 497

22.8 What is the nature of the systems they invade? 498

22.9 How do they impact the systems they invade? 498

22.10 What can we predict at present? 499

22.11 Good intentions are not enough 501

22.12 The costs and benefits of control 502

22.13 The new order 502

22.14 Invasions by genetically designed organisms 503

Topical and Correlative Index 509

Species Index 521
