

Contents

<i>Preface</i>	xv
1 Preliminaries	1
1.1 Atoms and Fields	1
1.2 Important Parameters	2
1.3 Maxwell's Equations	4
1.4 Atom–Field Hamiltonian	7
1.5 Dirac Notation	8
1.6 Where Do We Go from Here?	9
1.7 Appendix: Atom–Field Hamiltonian	10
<i>Problems</i>	13
<i>References</i>	14
<i>Bibliography</i>	15
2 Two-Level Quantum Systems	17
2.1 Review of Quantum Mechanics	17
2.1.1 Time-Independent Problems	17
2.1.2 Time-Dependent Problems	19
2.2 Interaction Representation	21
2.3 Two-Level Atom	23
2.4 Rotating-Wave or Resonance Approximation	25
2.4.1 Analytic Solutions	28
2.5 Field Interaction Representation	32
2.6 Semiclassical Dressed States	36
2.6.1 Adiabatic Following	39
2.7 General Remarks on Solution of the Matrix Equation $\dot{y}(t) = A(t)y(t)$	42
2.7.1 Perturbation Theory	43
2.7.2 Adiabatic Approximation	43
2.7.3 Magnus Approximation	43
2.8 Summary	45
2.9 Appendix A: Representations	45
2.9.1 Relationships between the Representations	46
2.10 Appendix B: Spin Half Quantum System in a Magnetic Field	47
2.10.1 Analytic Solutions—Magnetic Case	48
<i>Problems</i>	50
<i>References</i>	54
<i>Bibliography</i>	55

3	Density Matrix for a Single Atom	56
3.1	Density Matrix	56
3.2	Interaction Representation	62
3.3	Field Interaction Representation	63
3.4	Semiclassical Dressed States	66
3.5	Bloch Vector	67
3.5.1	No Relaxation	70
3.5.2	Relaxation Included	74
3.6	Summary	75
3.7	Appendix A: Density Matrix Equations in the Rotating-Wave Approximation	75
3.7.1	Schrödinger Representation	75
3.7.2	Interaction Representation	76
3.7.3	Field Interaction Representation	76
3.7.4	Bloch Vector	76
3.7.5	Semiclassical Dressed-State Representation	77
3.8	Appendix B: Collision Model	78
	<i>Problems</i>	80
	<i>References</i>	81
	<i>Bibliography</i>	82
4	Applications of the Density Matrix Formalism	83
4.1	Density Matrix for an Ensemble	83
4.2	Absorption Coefficient—Stationary Atoms	85
4.3	Simple Inclusion of Atomic Motion	91
4.4	Rate Equations	95
4.5	Summary	96
	<i>Problems</i>	97
	<i>References</i>	98
	<i>Bibliography</i>	98
5	Density Matrix Equations: Atomic Center-of-Mass Motion, Elementary Atom Optics, and Laser Cooling	99
5.1	Introduction	99
5.2	Atom in a Single Plane-Wave Field	100
5.3	Force on an Atom	101
5.3.1	Plane Wave	102
5.3.2	Focused Plane Wave: Atom Trapping	103
5.3.3	Standing-Wave Field: Laser Cooling	105
5.4	Summary	109
5.5	Appendix: Quantization of the Center-of-Mass Motion	110
5.5.1	Coordinate Representation	110
5.5.2	Momentum Representation	112
5.5.3	Sum and Difference Representation	113
5.5.4	Wigner Representation	113
	<i>Problems</i>	115
	<i>References</i>	118
	<i>Bibliography</i>	119

6	Maxwell-Bloch Equations	120
6.1	Wave Equation	120
6.1.1	Pulse Propagation in a Linear Medium	121
6.2	Maxwell-Bloch Equations	123
6.2.1	Slowly Varying Amplitude and Phase Approximation (SVAPA)	124
6.3	Linear Absorption and Dispersion—Stationary Atoms	125
6.4	Linear Pulse Propagation	128
6.5	Other Problems with the Maxwell-Bloch Equations	129
6.6	Summary	130
6.7	Appendix: Slowly Varying Amplitude and Phase Approximation—Part II	130
	<i>Problems</i>	134
	<i>Bibliography</i>	135
7	Two-Level Atoms in Two or More Fields: Introduction to Saturation Spectroscopy	136
7.1	Two-Level Atoms and N Fields—Third-Order Perturbation Theory	136
7.1.1	Zeroth Order	138
7.1.2	First Order	138
7.1.3	Second Order	139
7.1.4	Third Order	139
7.2	$N = 2$: Saturation Spectroscopy for Stationary Atoms	141
7.3	$N = 2$: Saturation Spectroscopy for Moving Atoms in Counterpropagating Fields—Hole Burning	144
7.3.1	Hole Burning and Atomic Population Gratings	144
7.3.2	Probe Field Absorption	146
7.4	Saturation Spectroscopy in Inhomogeneously Broadened Solids	149
7.5	Summary	151
7.6	Appendix A: Saturation Spectroscopy—Stationary Atoms in One Strong and One Weak Field	151
7.7	Appendix B: Four-Wave Mixing	153
	<i>Problems</i>	155
	<i>References</i>	157
	<i>Bibliography</i>	157
8	Three-Level Atoms: Applications to Nonlinear Spectroscopy—Open Quantum Systems	159
8.1	Hamiltonian for Λ , V , and Cascade Systems	159
8.1.1	Cascade Configuration	161
8.1.2	V and Λ Configurations	162
8.1.3	All Configurations	163
8.2	Density Matrix Equations in the Field Interaction Representation	163
8.3	Steady-State Solutions—Nonlinear Spectroscopy	165

8.3.1	Stationary Atoms	169
8.3.2	Moving Atoms: Doppler Limit	169
8.4	Autler-Townes Splitting	172
8.5	Two-Photon Spectroscopy	176
8.6	Open versus Closed Quantum Systems	178
8.7	Summary	179
	<i>Problems</i>	179
	<i>References</i>	182
	<i>Bibliography</i>	182
9	Three-Level Λ Atoms: Dark States, Adiabatic Following, and Slow Light	184
9.1	Dark States	184
9.2	Adiabatic Following—Stimulated Raman Adiabatic Passage	188
9.3	Slow Light	191
9.4	Effective Two-State Problem for the Λ Configuration	196
9.5	Summary	198
9.6	Appendix: Force on an Atom in the Λ Configuration	199
	<i>Problems</i>	200
	<i>References</i>	202
	<i>Bibliography</i>	203
10	Coherent Transients	206
10.1	Coherent Transient Signals	206
10.2	Free Polarization Decay	210
10.2.1	Homogeneous Broadening	210
10.2.2	Inhomogeneous Broadening	212
10.3	Photon Echo	214
10.4	Stimulated Photon Echo	219
10.5	Optical Ramsey Fringes	222
10.6	Frequency Combs	225
10.7	Summary	228
10.8	Appendix A: Transfer Matrices in Coherent Transients	229
10.9	Appendix B: Optical Ramsey Fringes in Spatially Separated Fields	231
	<i>Problems</i>	235
	<i>References</i>	237
	<i>Bibliography</i>	240
11	Atom Optics and Atom Interferometry	242
11.1	Review of Kirchhoff-Fresnel Diffraction	242
11.1.1	Electromagnetic Diffraction	242
11.1.2	Quantum-Mechanical Diffraction	246
11.2	Atom Optics	248
11.2.1	Scattering by an Amplitude Grating	250
11.2.2	Scattering by Periodic Structures—Talbot Effect	253
11.2.3	Scattering by Phase Gratings—Atom Focusing	254

11.3	Atom Interferometry	263
11.3.1	Microfabricated Elements	266
11.3.2	Counterpropagating Optical Field Elements	267
11.4	Summary	274
	<i>Problems</i>	275
	<i>References</i>	277
	<i>Bibliography</i>	279
12	The Quantized, Free Radiation Field	280
12.1	Free-Field Quantization	280
12.2	Properties of the Vacuum Field	283
12.2.1	Single-Photon State	284
12.2.2	Single-Mode Number State	285
12.2.3	Quasiclassical or Coherent States	286
12.3	Quadrature Operators for the Field	291
12.3.1	Pure n State	292
12.3.2	Coherent State	293
12.4	Two-Photon Coherent States or Squeezed States	293
12.4.1	Calculation of $U_L(z)$	296
12.5	Phase Operator	298
12.6	Summary	300
12.7	Appendix: Field Quantization	300
12.7.1	Reciprocal Space	302
12.7.2	Longitudinal and Transverse Vector Fields	303
12.7.3	Transverse Electromagnetic Field	304
12.7.4	Free Field	308
	<i>Problems</i>	308
	<i>References</i>	310
	<i>Bibliography</i>	311
13	Coherence Properties of the Electric Field	312
13.1	Coherence: Some General Concepts	312
13.1.1	Time versus Ensemble Averages	312
13.1.2	Classical Fields	314
13.1.3	Quantized Fields	314
13.2	Classical Fields: Correlation Functions	315
13.2.1	First-Order Correlation Function	315
13.2.2	Young's Fringes	319
13.2.3	Intensity Correlations—Second-Order Correlation Function	322
13.2.4	Hanbury Brown and Twiss Experiment	325
13.3	Quantized Fields: Density Matrix for the Field and Photon Optics	326
13.3.1	Coherent State	327
13.3.2	Thermal State	328
13.3.3	$P(\alpha)$ Distribution	329
13.3.4	Correlation Functions for the Field	330
13.4	Summary	336

<i>Problems</i>	336
<i>References</i>	337
<i>Bibliography</i>	338
14 Photon Counting and Interferometry	339
14.1 Photodetection	339
14.1.1 Photodetection of Classical Fields	340
14.1.2 Photodetection of Quantized Fields	343
14.2 Michelson Interferometer	346
14.2.1 Classical Fields	347
14.2.2 Quantized Fields	349
14.3 Summary	355
<i>Problems</i>	355
<i>References</i>	357
<i>Bibliography</i>	357
15 Atom–Quantized Field Interactions	358
15.1 Interaction Hamiltonian and Equations of Motion	358
15.1.1 Schrödinger Representation	358
15.1.2 Heisenberg Representation	359
15.1.3 Hamiltonian	360
15.1.4 Jaynes-Cummings Model	363
15.2 Dressed States	367
15.3 Generation of Coherent and Squeezed States	371
15.3.1 Coherent States	371
15.3.2 Squeezed States	372
15.4 Summary	372
<i>Problems</i>	373
<i>References</i>	374
<i>Bibliography</i>	374
16 Spontaneous Decay	375
16.1 Spontaneous Decay Rate	375
16.2 Radiation Pattern and Repopulation of the Ground State	382
16.2.1 Radiation Pattern	383
16.2.2 Repopulation of the Ground State	387
16.3 Summary	389
16.4 Appendix A: Circular Polarization	389
16.5 Appendix B: Radiation Pattern	392
16.5.1 Unpolarized Initial State	395
16.5.2 z -Polarized Excitation	395
16.5.3 Other than z -Polarized Excitation	397
16.6 Appendix C: Quantum Trajectory Approach to Spontaneous Decay	397
<i>Problems</i>	399
<i>References</i>	401
<i>Bibliography</i>	401

17 Optical Pumping and Optical Lattices	402
17.1 Optical Pumping	402
17.1.1 Traveling-Wave Fields	403
17.1.2 z -Polarized Excitation	407
17.1.3 Irreducible Tensor Basis	409
17.1.4 Standing-Wave and Multiple-Frequency Fields	411
17.2 Optical Lattice Potentials	414
17.3 Summary	417
17.4 Appendix: Irreducible Tensor Formalism	417
17.4.1 Coupled Tensors	417
17.4.2 Density Matrix Equations	418
<i>Problems</i>	420
<i>References</i>	421
<i>Bibliography</i>	421
18 Sub-Doppler Laser Cooling	422
18.1 Cooling via Field Momenta Exchange and Differential Scattering	423
18.1.1 Counterpropagating Fields	425
18.2 Sisyphus Picture of the Friction Force for a $G = 1/2$ Ground State and Crossed-Polarized Fields	433
18.3 Coherent Population Trapping	436
18.4 Summary	437
18.5 Appendix: Fokker-Planck Approach for Obtaining the Friction Force and Diffusion Coefficients	437
18.5.1 Fokker-Planck Equation	437
18.5.2 $G = 1/2$; $\text{lin} \perp \text{lin}$ Polarization	441
18.5.3 $G = 1$ to $H = 2$ Transition; $\sigma_+ - \sigma_-$ Polarization	443
18.5.4 Equilibrium Energy	445
<i>Problems</i>	449
<i>References</i>	451
<i>Bibliography</i>	452
19 Operator Approach to Atom–Field Interactions:	
Source-Field Equation	453
19.1 Single Atom	454
19.1.1 Single-Mode Field	454
19.1.2 General Problem— n Field Modes	456
19.2 N -Atom Systems	460
19.3 Source-Field Equation	461
19.4 Source-Field Approach: Examples	465
19.4.1 Average Field and Field Intensity in Spontaneous Emission	466
19.4.2 Frequency Beats in Emission: Quantum Beats	467
19.4.3 Four-Wave Mixing	468
19.4.4 Linear Absorption	469
19.5 Summary	470

<i>Problems</i>	470
<i>References</i>	472
<i>Bibliography</i>	472
20 Light Scattering	474
20.1 General Considerations: Perturbation Theory	475
20.2 Mollow Triplet	479
20.2.1 Dressed-State Approach to Mollow Triplet	483
20.2.2 Source-Field Approach to Mollow Triplet	485
20.3 Second-Order Correlation Function for the Radiated Field	486
20.4 Scattering by a Single Atom in Weak Fields: $G \neq 0$	487
20.5 Summary	488
<i>Problems</i>	489
<i>References</i>	490
<i>Bibliography</i>	490
21 Entanglement and Spin Squeezing	492
21.1 Entanglement by Absorption	493
21.2 Entanglement by Post-Selection—DLCZ Protocol	498
21.3 Spin Squeezing	500
21.3.1 General Considerations	500
21.3.2 Spin Squeezing Using a Coherent Cavity Field	502
21.4 Summary	505
<i>Problems</i>	505
<i>References</i>	506
<i>Bibliography</i>	507
<i>Index</i>	509
