

# Contents in Detail

<i>Preface</i>	<i>xviii</i>
Basic focus	xviii
Structure	xix
Pedagogical aids	xx
Acknowledgments	xxi

## Part I Fundamentals

<b>1 Introduction and Motivation</b>	<b>3</b>
Norm and reality	3
Example: impact of the order in which information arrives	4
Use of decision findings in science	5
Example: preference reversal	5
Before we change our model	6
Opening new areas of social-scientific research	6
Example: behavioral economics	7
Use of decision findings in practice	7
Cultivation of decision-making	7
Manipulation of decision-making	10
The problem of paternalism	12
Misplaced cultivation or paternalistic manipulation	13
A caveat	13
Summary	14
Review questions	14
Hints to review questions	15
<b>2 Basic Concepts</b>	<b>16</b>
Decision-making versus problem-solving	16
Problem-solving	17
Decision-making	17
Problem-solving versus decision-making	18
Task, individual, I-T pair, decision constraints	18
Task	18
Individual	19
I-T pair	19
Decision constraints	21
Actions, algorithms	21
Actions	21
Algorithms	22

Three basic decision dimensions	23
Attributes	24
States of the world	24
Periods	29
Exogeneity and endogeneity of weights	30
Outcome lattice	31
Constituents	32
Preference	32
Total preference	32
Elementary preference	33
Selected types of elementary preferences	33
Substantive and procedural part of an outcome	38
Reasoning and comparing	38
Reasoning	38
Comparing	39
Reasoning and comparing are intertwined	40
Decision maxim, normativeness	40
Decision maxim	40
Normative decision maxim, normative algorithm	40
Arguments in favor of normativeness of a decision maxim	41
Evolution, norm, and prescription	43
Heuristics	44
Three examples of heuristics	44
The adaptive toolbox hypothesis	45
Axiomatization of an algorithm	46
Summary	47
Review questions	48
Exercises	49
Hints to exercises	50
<b>3 An Overview of the Main Areas of Decision Science</b>	<b>52</b>
Non-interactive decision-making	52
Reasoning and comparing	52
Normative issues, higher-order decision-making	54
Looking up subtask	54
Preferences: special types and phenomena	55
Non-standard circumstances, impact of emotions	55
Interactive decision-making	56
Impact of social labels	56
Naturalistic decision-making	57
<b>4 History of Research on Decision-Making</b>	<b>58</b>
Overview of the history	58
First stage (up to the 1920s)	59
Aristotle and deduction	59
Expected value versus expected utility	59
Marginalist revolution	60

Second stage (1920s–1950s)	61
Psychology as an experimental science	61
First experiments: MADM, deduction	62
First axiomatizations: single attribute, MSDM	62
First experiments: induction, MSDM	63
Third stage (1950s–1970s)	64
Decision-making as a separate subject	64
Simon's emphasis on procedural outcomes	65
Man as an information-processing system	66
First axiomatizations: MADM, MPDM	67
First experiments: MPDM	67
Contributions by Kahneman and Tversky	67
Fourth stage (since the 1970s)	68
People adapt their algorithms	68
Gigerenzer's emphasis on correct methodology	69
Economists focus on methods too	70
Summary	70
Review questions	70
Hints to review questions	71
<b>5 Methodology of Decision Science</b>	<b>72</b>
Process models and paramorphic models	72
Empirical methods of decision science	73
Overview of methods	73
Intrusiveness–ambiguity tradeoff	73
Non-interventional methods	75
Interventional methods	76
Use of more than one method	83
Selected response modes	83
Some difficulties of empirical decision research	83
Neutral modification of the I-T pair	83
External validity of empirical research	86
Ecological validity of empirical research	87
Participants in experiments	88
Motivation of the individual	90
Credibility of the experiment	106
Undesirable implicatures	108
Differences in the degree of discrimination	112
Summary	114
Review questions	115
Hints to review questions	116
<b>Appendix: Some Concepts from the General Methodology of Science</b>	<b>117</b>
Descriptive versus normative approach	117
What is the aim of science?	117
Aim of science according to realists	117

Aim of science according to instrumentalists	118
Realism versus instrumentalism	118
How does scientific knowledge arise?	119
The rise of scientific knowledge according to aposteriorists	119
The rise of scientific knowledge according to apriorists	121
Aposteriorism versus apriorism	121
Popper's falsificationism	121
Two stages of development according to Popper	122
Popper's conclusion	124
Weaknesses of falsificationism	124
Kuhn's sociological perspective	124
Impact of extra-scientific developments	124
Normal science	125
Cyclical evolution of scientific knowledge	125
Kuhn's conclusion	126
Weaknesses of the Kuhnian view	126
Some other methodological concepts	126
Reductionism	126
Methodological individualism and collectivism	127
<b>6 Selected Decision Maxims</b>	<b>128</b>
Relationships among maxims	128
Maxims covered in the chapter	129
<i>Preferential Independence</i>	129
Normativeness of the maxim	130
<i>Asymmetry</i>	132
Normativeness of the maxim	132
Violation of a broader version of the maxim: "Vacation Spots"	133
Maxims based on the notion of transitivity	134
Normativeness of <i>Transitivity in Reasoning</i>	135
Normativeness of <i>Transitivity in Comparing</i>	135
Empirical tests of <i>Transitivity in Comparing</i> : the problem of noise	138
Three stochastic transitivity	138
Normativeness of stochastic transitivity	139
Maxims based on the notion of dominance	141
<i>Weak Dominance</i> versus <i>Strong Dominance</i>	142
Transposition of the maxims into reduced formalism	142
Normativeness of maxims based on dominance	146
Violations of maxims based on dominance	146
<i>Independence of Irrelevant Actions</i>	153
Menu-maxims, menu-effects	153
Special menu-effects	154
Formulation of the maxim	155
Normativeness of the maxim	155
Violation of the maxim: "Paper Products"	156
<i>Regularity</i>	157
Formulation of the maxim	157

Normativeness of the maxim	158
Violation of the maxim: “Brand Pen”	158
<i>Sure-thing Principle and Independence</i>	159
Sure-thing Principle as weak dominance in MSDM	159
Normativeness of the maxims	162
<i>Truth or Mathematical Implications First</i>	164
Deductions about uncertainty	164
Box model with $2 \times 2$ signs	165
Mathematical implications of the box model with $2 \times 2$ signs	167
Box model with $m \times n$ signs	167
Formulation of the maxim	168
Normativeness of the maxim	168
Specific versions of the maxim	168
Violations of the maxim	169
<i>Intuitive Law of Large Numbers</i>	175
Formulation of the maxim	175
Normativeness of the maxim	175
Violation of the maxim: “Two Hospitals”	175
<i>Aggregation</i>	176
Formulation of the maxim	176
Normativeness of the maxim	178
Violations of the maxim	178
<i>Completeness</i>	180
<i>Stability</i>	180
Normativeness of the maxim: plausibility argument	181
Violation of the maxim: “Hannah at Play”	181
Confirmation bias	182
Summary	182
Review questions	184
Exercises	186
Hints to review questions	188
Hints to exercises	189

## Part II Models and Findings

<b>7 Inductive Reasoning I – Generalization and Sampling</b>	<b>193</b>
Selected classes of inductive tasks	193
Generalization	194
Early evidence	194
Explanation of the evidence	197
Recent evidence: “Bet on Conjunction”	200
Sampling	203
Empirical evidence	203
Explanation of the evidence	205
Summary	207
Review questions	208
Hints to review questions	208

<b>8 Inductive Reasoning II – Forecasting</b>	<b>209</b>
Terminology and notation	209
Two basic types of forecasting	210
Observations-based forecasting	211
Four types of observations-based forecasts	211
Empirical evidence: “Venture Capitalists”	212
Other evidence on the power of bootstrap forecasts	213
Explanation of the evidence	214
Other arguments concerning the use of formulas	215
Formula-based forecasting	215
Example: binomial equiprobable processes	216
Explanation of the evidence	220
Summary	224
Review questions	225
Hints to review questions	225
<b>9 Inductive Reasoning III – Influence of Comparing</b>	<b>226</b>
What is motivated reasoning?	226
Explanation of motivated reasoning	227
Examples of motivated reasoning	228
Cases where effort or skill is not involved	229
Optimism and pessimism	229
Early evidence	229
Recent evidence: “Optimistic Bettors”	230
Cases where effort or skill is involved	232
Overconfidence and underconfidence	232
Selected early evidence	232
Recent evidence: “Ranking-based Competition”	234
Explanations: motivated reasoning and <i>Differential Regression</i>	237
Self-serving bias in fairness	238
Practical implications of the bias	239
Empirical evidence: “Payment to an Injured Motorcyclist”	239
Policy implications of self-serving bias in fairness	241
Summary	241
Review questions	242
Hints to review questions	242
<b>10 Comparing in General I – Types of Utilities</b>	<b>243</b>
Multiple types of utilities	243
Formation of remembered utility	245
<i>Temporal Integration, Temporal Monotonicity</i>	245
Selected evidence: “Hands in Cold Water”	246
Explanation of the evidence: <i>Peak &amp; End Rule</i>	247
Policy implications	248
Critical reactions	249

Formation of predicted utility	250
Reasons why experienced utility differs from the past	250
Analogy with two different persons: empathy gap	251
Selected evidence: “Healthy and Unhealthy Snacks”	251
Explanation of the evidence: projection bias	254
Economic application: overbuying	257
Summary	259
Review questions	260
Hints to review questions	260
<b>11 Comparing in General II – Reference Dependence</b>	<b>261</b>
Absolute versus relative evaluation	261
Internal and external relative evaluation	262
Relative evaluation is easier	262
Endowment effects	262
Potential implications of endowment effects in practice	262
Potential implications of endowment effects in economics	263
Empirical evidence: “Sellers and Choosers”	263
Impact of aspiration levels	265
Empirical evidence: “NYC Taxi Drivers”	265
Loss-averse reference dependence	266
Value function	266
Myopic evaluation with value function	268
Loss aversion	269
Explanation of endowment effect and of the impact of aspiration levels	272
Explanation of the evidence: “Sellers and Choosers”	272
Explanation of the evidence: “NYC Taxi Drivers”	275
Origin of loss aversion	277
External relative evaluation	277
Empirical evidence: “Radiation or Surgery”	278
Explanation of the evidence	280
Does relative evaluation also explain default effects?	282
Examples of default effects	282
Explanation of default effects	283
Summary	284
Review questions	285
Hints to review questions	286
<b>12 Comparing I – Multiple States of the World</b>	<b>287</b>
Assumptions and notation	287
Two basic models	288
<i>Expected Value Maximization</i>	288
Terminology of attitudes towards risk	288
Utility function	289
<i>Expected Utility Maximization</i>	289
Marschak triangle	293

Selected empirical evidence	295
Early evidence	295
Recent evidence: "Fourfold Pattern"	299
<i>Cumulative Prospect Theory</i>	300
Value function, losses, gains	301
Formal apparatus of <i>Cumulative Prospect Theory</i>	301
Explanation of the evidence: fourfold pattern	307
<i>Cumulative Prospect Theory's</i> evaluation of the four types of actions	307
Explanation provided by value function	308
Explanation provided by probability transformation	308
The dominant explanatory role of probability transformation	309
Numerical example	310
Explanation of the evidence: common consequence effect	311
Phenomena that <i>Cumulative Prospect Theory</i> cannot explain	312
Competing models	312
The case of ambiguity	313
Summary	314
Review questions	315
Exercises	316
Hints to review questions	317
Hints to exercises	317
<b>13 Comparing II – Multiple Periods</b>	<b>318</b>
Concepts and notation	318
Expressing location of outcomes in the future	318
<i>Independent Additively Separable Intertemporal Utility</i> <i>Maximization</i>	320
Two basic types of weighting of future periods	320
Discount factor, discount rate	321
Reasons for time discounting	321
Do people discount the future?	323
<i>Exponential discounting</i>	324
Time consistency	325
Empirical evidence: time inconsistency	325
Casual versus scientific observations of time inconsistency	326
Fighting time inconsistency: commitment	326
Commitment through restraint	327
Commitment through punishment	327
Internal commitment	328
Willpower	328
Policy implications concerning commitment	329
Explanation of the evidence	330
Growing discount factors	330

---

Further evidence	334
“Discounting in Denmark”	334
<i>Quasi-hyperbolic Discounting</i>	337
Economic applications of <i>Quasi-hyperbolic Discounting</i>	338
<i>Hyperbolic Discounting</i>	339
Summary	340
Review questions	341
Hints to review questions	342
<i>Bibliography</i>	343
<i>Index</i>	363
