Part I Phenomenological Description of Emission Processes

1	Introduction	3
1.1	Binding Energy and Q -Value	3
1.2	Strong Emission Processes	5
1.3	Electro-Weak Emission Processes	7
	References	9
2	Binary Emission Processes	11
2.1	General Remarks	11
2.2	Angular Momentum Representation	13
2.2.1	Spherical Boson Emitters	13
2.2.2	Spherical Fermion Emitters	16
2.3	S-Matrix	17
2.3.1	Scattering States	17
2.3.2	Resonances	18
2.3.3	Poles of the S-Matrix	20
2.4	Gamow States	22
2.5	Decay Width and Half Life	25
2.6	Decay Rules for the Half Life	28
2.7	Decay Rule for the Reduced Width	33
2.8	Inter-Fragment Potential	39
2.9	Double Folding Potential	40
2.9.1	Boson Emission	42
2.9.2	Fermion Emission	43
2.9.3	Vibrational Nuclei	44
2.9.4	Triaxial Nuclei	45
2.10	Spectroscopic Factor	45
2.10.1	Particle Emission	46

2.10.2 Cluster Emission	46
References	48
3 Core-Angular Harmonics	51
3.1 Definition	51
3.2 Boson Emission	53
3.3 Fermion Emission	54
3.4 Angular Distribution	56
3.4.1 Fermion Emission	56
3.4.2 Boson Emission	58
References	59
4 Coupled Channels Methods	61
4.1 Numerical Integration	61
4.2 Integration Procedures	65
4.3 Diagonalization Method	66
4.4 Analytical Continuation Method	68
4.5 Distorted Wave Approach (DWA)	68
4.6 Two Potential Method	72
4.7 Intrinsic System of Coordinates	73
4.8 Adiabatic Approach	77
4.9 Coupled Channels Calculations for Proton Emitters	79
4.10 Proton Emission from Rotational Odd–Odd Nuclei and from Rotational–Vibrational Odd–Even Nuclei	84
4.11 Emission from Rotational Triaxial Nuclei	87
References	90
5 Semiclassical Approach	93
5.1 Penetration Formula	93
5.1.1 Spherical Approach	93
5.1.2 Deformed Approach	94
5.2 Cluster Model (CM)	96
5.3 Super Asymmetric Fission Model (SAFM)	99
5.4 Effective Liquid Drop Model (ELDM)	102
5.5 Fragmentation Theory (FT)	103
References	104
6 Fine Structure of Emission Processes	107
6.1 α -Decay Fine Structure	107
6.2 Coupled Channels Description of the α -Decay Fine Structure	111
6.3 α -Decay Fine Structure in Rotational Nuclei	112
6.4 α -Decay Fine Structure in Vibrational Nuclei	122
6.5 Proton Emission in Vibrational Nuclei	130
6.6 Double Fine Structure in Cold Fission	132
References	139

7 Ternary Emission Processes 143
 7.1 Coupled Channels Equations for Two Proton Emission 143
 7.2 Coupled Channels Equations for Ternary Fission 146
 7.3 Ternary Potential. 149
 7.4 Angular Distribution of the Light Particle. 150
 References 157

Part II Microscopic Description of Emission Processes

8 Microscopic Emission Theories. 163
 8.1 Time Dependent Approach 163
 8.1.1 Integral Formula. Fermi “Golden Rule” 163
 8.1.2 Surface Formula. Preformation Amplitude 166
 8.1.3 Time-Dependent Approach for Proton Emitters 167
 8.2 Resonating Group Method (RGM). 170
 8.3 Feshbach Reaction Theory 172
 8.4 R-Matrix Approach 174
 8.4.1 Spherical Emitters. 174
 8.4.2 Deformed Emitters 176
 8.4.3 R-Matrix Approach for Two Proton Emission 180
 References 181

9 Preformation Amplitude. 183
 9.1 Definition 183
 9.2 α -Particle Wave Function 183
 9.3 Multi-step Shell Model (MSM). 184
 9.3.1 Two-Body Correlations 187
 9.3.2 Four-Body Correlations 189
 9.4 α -Decay from ^{212}Po 190
 9.4.1 Single-Particle Basis 190
 9.4.2 Two-Particle States 191
 9.4.3 α -Like States 192
 9.5 α -Like Resonances in ^{40}Ca 198
 9.6 Superfluid α -Emitters 203
 9.6.1 Deformed Nuclei 203
 9.6.2 Superdeformed Nuclei 206
 9.6.3 Spherical Nuclei 208
 9.7 α -Decay in Superheavy Nuclei 209
 9.8 Two Proton Superfluid Emitters 217
 References 219

10 Selfconsistent Emission Theory. 223
 10.1 General Framework 223
 10.2 A Simple Cluster Model. 225

10.3	Two Harmonic Oscillator Model	228
10.4	Selfconsistent Description of the α -Decay	231
	References	239
11	QRPA Description of the α-Decay to Excited States	241
11.1	Description of the Excited States	241
11.2	α -Particle Preformation Amplitude	243
11.3	Analysis of the Experimental Data	247
11.4	Analysis of the QRPA Features	250
11.5	Systematic Predictions	253
	References	256
12	Heavy Cluster Decays	259
12.1	Preformation Amplitude of Heavy Clusters	259
12.1.1	α -Particle Emission	259
12.1.2	^8Be Emission	260
12.1.3	^{12}C Emission	261
12.1.4	^{14}C Emission	262
12.2	Two Center Shell Model (TCSM)	264
	References	267
13	Conclusions	269
14	Appendices	271
14.1	Single Particle Mean Field	273
14.1.1	Nuclear Potential	274
14.1.2	Coulomb Potential	275
14.1.3	Spin-Orbit Potential	276
14.2	WKB for Coulomb Functions	278
14.3	Rotations	280
14.4	Reduced Matrix Elements	282
14.5	Numerov Integration Method	284
14.6	Runge–Kutta Integration Method	285
14.7	Spheroidal System of Coordinates	286
14.8	Spherical Harmonic Oscillator	288
14.8.1	Spherical Shifted Harmonic Oscillator	289
14.9	Diagonalisation Procedure in a Non-Orthogonal Basis	290
14.10	Four-Particle Metric Matrix	292
14.11	Two Quasiparticle Preformation Amplitude	292
	References	293
	Index	295
