Contents

1 Introduction 1
- 1.1 History of Variable Exponent Spaces 2
- 1.2 Structure of the Book 4
- 1.3 Summary of Central Results 7
- 1.4 Notation and Background 10

Part I Lebesgue Spaces

2 A Framework for Function Spaces 21
- 2.1 Basic Properties of Semimodular Spaces 21
- 2.2 Conjugate Modulars and Dual Semimodular Spaces 29
- 2.3 Musielak–Orlicz Spaces: Basic Properties 34
- 2.4 Uniform Convexity 42
- 2.5 Separability 48
- 2.6 Conjugate Φ-Functions 52
- 2.7 Associate Spaces and Dual Spaces 57
- 2.8 Embeddings and Operators 66

3 Variable Exponent Lebesgue Spaces 69
- 3.1 The Lebesgue Space Φ-Function 69
- 3.2 Basic Properties 73
- 3.3 Embeddings 82
- 3.4 Properties for Restricted Exponents 87
- 3.5 Limit of Exponents 92
- 3.6 Convolution* 94

4 The Maximal Operator 99
- 4.1 Logarithmic Hölder Continuity 100
- 4.2 Point-Wise Estimates 104
- 4.3 The Boundedness of the Maximal Operator 110
- 4.4 Weak-Type Estimates and Averaging Operators 115
- 4.5 Norms of Characteristic Functions 122
- 4.6 Mollification and Convolution 127

4.7 Necessary Conditions for Boundedness* 131
4.8 Preimage of the Maximal Operator* 138

5 The Generalized Muckenhoupt Condition* 143
5.1 Non Sufficiency of log-Hölder Continuity* 143
5.2 Class $\mathcal{A}^*$ 149
5.3 Class $\mathcal{A}$ for Variable Exponent Lebesgue Spaces* 157
5.4 Class $\mathcal{A}_\infty{}^*$ 159
5.5 A Sufficient Condition for the Boundedness of M^* 168
5.6 Characterization of (Strong-)Domination* 175
5.7 The Case of Lebesgue Spaces with Variable Exponents* 180
5.8 Weighted Variable Exponent Lebesgue Spaces* 192

6 Classical Operators 199
6.1 Riesz Potentials 199
6.2 The Sharp Operator $M^\sharp f$ 206
6.3 Calderón–Zygmund Operators 208

7 Transfer Techniques 213
7.1 Complex Interpolation 213
7.2 Extrapolation Results 218
7.3 Local-to-Global Results 222
7.4 Ball/Cubes-to-John 237

Part II Sobolev Spaces

8 Introduction to Sobolev Spaces 247
8.1 Basic Properties 247
8.2 Poincaré Inequalities 252
8.3 Sobolev-Poincaré Inequalities and Embeddings 265
8.4 Compact Embeddings 272
8.5 Extension Operator 275
8.6 Limiting Cases of Sobolev Embeddings* 283

9 Density of Regular Functions 289
9.1 Basic Results on Density 290
9.2 Density with Continuous Exponents 293
9.3 Density with Discontinuous Exponents* 299
9.4 Density of Continuous Functions* 305
9.5 The Lipschitz Truncation Method* 310

10 Capacities 315
10.1 Sobolev Capacity 315
10.2 Relative Capacity 322
10.3 The Relationship Between the Capacities 331
10.4 Sobolev Capacity and Hausdorff Measure 334

11 Fine Properties of Sobolev Functions 339
11.1 Quasicontinuity 339
11.2 Sobolev Spaces with Zero Boundary Values 345
11.3 Exceptional Sets in Variable Exponent Sobolev Spaces 350
11.4 Lebesgue Points 352
11.5 Failure of Existence of Lebesgue Points* 360

12 Other Spaces of Differentiable Functions 367
12.1 Trace Spaces 368
12.2 Homogeneous Sobolev Spaces 378
12.3 Sobolev Spaces with Negative Smoothness 383
12.4 Bessel Potential Spaces* 388
12.5 Besov and Triebel–Lizorkin Spaces* 392

Part III Applications to Partial Differential Equations

13 Dirichlet Energy Integral and Laplace Equation 401
13.1 The One Dimensional Case 402
13.2 Minimizers 412
13.3 Harmonic and Superharmonic Functions 417
13.4 Harnack's Inequality for A-harmonic Functions 421

14 PDEs and Fluid Dynamics 437
14.1 Poisson Problem 437
14.2 Stokes Problem 446
14.3 Divergence Equation and Consequences 459
14.4 Electrorheological Fluids 470
