

Table of contents

Summary and Policy Conclusions	13
Chapter 1. Economic Growth: the Aggregate Evidence	27
Introduction	28
1.1. Recent cross-country growth patterns	28
1.2. The role of skills and labour utilisation in labour productivity growth	37
1.3. The role of information and communication technology ..	38
1.4. Multi-factor productivity growth	45
1.5. Concluding remarks	51
Chapter 2. Policy Settings, Institutions and Aggregate Economic Growth: a Cross-country Analysis	55
Introduction	56
2.1. An overview of policy influences on economic growth	57
2.2. Econometric evidence on the links between investment, policy settings and growth	71
2.3. Assessing the long-run effects of policy and institutional changes on GDP per capita	87
2.4. Concluding remarks	89
Chapter 3. What Drives Productivity Growth at the Industry Level?	95
Introduction	96
3.1. Within-industry growth and reallocation of resources across industries	96
3.2. An overview of the potential influences of policies and institutions on productivity	99
3.3. Empirical analysis	103
3.4. Concluding remarks	120

Chapter 4. Firm Dynamics, Productivity and Policy Settings	127
Introduction	128
4.1. What lies behind within-industry productivity growth?	
Reallocation of resources <i>versus</i> within-firm growth	130
4.2. The entry and exit of firms	139
4.3. Which firms survive and which expand?	143
4.4. Regulations, institutions and firm entry: empirical analysis	146
4.5. Concluding remarks	155
Annex 1. Macroeconomic indicators of economic growth	159
Annex 2. The policy-and-institutions augmented growth model	177
Annex 3. Methodological details on the empirical analysis of industry multi-factor productivity	180
Annex 4. Details on firm-level data	183
Annex 5. Basic data and sources	208
Bibliography	235

List of boxes

1.1. Trend series: the extended Hodrick-Prescott filter	30
1.2. Estimating changes in the quality of factor inputs: the example of the labour input	39
1.3. Price measurement issues in ICT goods	43
1.4. Measures of multi-factor productivity (MFP)	48
1.5. Problems associated with assessing spillover effects in ICT-using sectors	52
2.1. Policy settings and growth: what does theory suggest?	58
2.2. The estimation technique	75
2.3. Description of the variables used in the empirical analysis	77
2.4. Consistency of results with different growth models	80
3.1. The theoretical links between product market competition and productivity	101
3.2. The estimated multi-factor productivity equation	105
3.3. Indicators of the stringency of product market regulations and employment protection legislation	110
3.4. A taxonomy of manufacturing industries according to their technology regimes	116
4.1. "Creative Destruction", firm dynamics and economic growth	129
4.2. Building up a consistent international dataset: the OECD firm-level study	131
4.3. The decomposition of productivity growth	133
4.4. The size of firms across sectors and countries	148
