

## Contents

	<b>Preface</b>	<i>IX</i>
	<b>Acknowledgments</b>	<i>XI</i>
<b>1</b>	<b>Introduction</b>	<i>1</i>
1.1	Heat and Fluid Flows in Materials Science and Engineering	<i>1</i>
1.2	Overview of the Present Work	<i>3</i>
<b>2</b>	<b>Mathematical Description of Physical Phenomena in Thermofluid Dynamics</b>	<i>7</i>
2.1	Conservation Equations for Continuum Media	<i>7</i>
2.1.1	Conservation of Mass	<i>8</i>
2.1.2	Conservation of Momentum	<i>9</i>
2.1.3	Energy Conservation Equation	<i>11</i>
2.1.4	Conservation of Chemical Species	<i>14</i>
2.1.5	Boussinesq Approximation	<i>15</i>
2.1.6	Unified Form of Conservation Equations	<i>16</i>
2.1.7	Nondimensional Form of Conservation Equations	<i>17</i>
2.1.8	Short Summary	<i>18</i>
2.2	Boundary and Initial Conditions	<i>19</i>
2.2.1	Heat Transfer	<i>20</i>
2.2.2	Solutal Transfer	<i>21</i>
2.2.3	Fluid Dynamics	<i>22</i>
2.3	Conservation Equations in Electromagnetics	<i>24</i>
2.3.1	Maxwell Equations	<i>24</i>
2.3.2	Induction and Poisson Equations	<i>25</i>
2.3.3	An Example of a Low Magnetic Reynolds Number Approximation: Rotating Magnetic Field	<i>28</i>
<b>3</b>	<b>Discretization Approaches and Numerical Methods</b>	<i>39</i>
3.1	The Finite Difference Method	<i>40</i>
3.1.1	Introduction	<i>40</i>
3.1.2	Approximation Schemes	<i>41</i>
3.1.3	Example of Conservative Property of FDM	<i>44</i>
3.1.4	Discretization Schemes of Unsteady Equations	<i>46</i>
3.1.5	Example of Unsteady Diffusion Equation	<i>50</i>
3.2	The Finite Volume Method	<i>52</i>
3.2.1	Basic Concept	<i>52</i>

3.2.2	Interpolation Schemes	54
3.2.3	Linearized Form of Discretized Conservation Equation	63
3.2.4	Treatment of Source Terms	66
3.2.5	Boundary Conditions	67
3.2.6	Comparative Study of Schemes for One-Dimensional Convection/Diffusion Problem	69
3.3	Solution of Linear Equation Systems	73
3.3.1	Direct Methods	73
3.3.2	Iterative Methods	75
3.3.3	Residuals and Convergence	79
3.3.4	Multigrid Method	80
3.3.5	Illustration of Iterative Methods	81
<b>4</b>	<b>Calculations of Flows with Heat and Mass Transfer</b>	<b>85</b>
4.1	Solution of Incompressible Navier–Stokes Equations	85
4.2	Pressure and Velocity Coupling: SIMPLE Family	86
4.2.1	SIMPLE	86
4.2.2	SIMPLER	90
4.2.3	SIMPLE with Collocated Variables Arrangement	91
4.3	Illustrations of Schemes for Flow with Heat Transfer	94
4.4	Complex Geometry Problems on Fixed Cartesian Grids	98
4.4.1	Immersed Boundary Methods	99
4.4.2	Cartesian Grid Methods	102
4.4.3	Immersed Surface Reconstruction	104
4.4.4	Illustration of Continuous-Forcing IBM	107
<b>5</b>	<b>Convection–Diffusion Phase-Change Problems</b>	<b>115</b>
5.1	Some Aspects of Solidification Thermodynamics	117
5.1.1	One-Component Melts	118
5.1.2	Binary Alloys	120
5.1.3	Interface and Equilibrium	125
5.2	Modeling of Macroscale Phase-Change Phenomena	129
5.2.1	Heat Transfer in Phase-Change Systems: Fixed and Moving Grids	130
5.2.2	Mathematical Models of a Binary Alloy Solidification	137
5.2.3	Closure Relations for the Volume Fraction of Liquid	144
5.3	Turbulent Solidification	148
5.3.1	Review of Unsteady RANS Modeling of a Solidification	148
5.3.2	Conditions for the DNS of Convection-Driven Solidification	151
5.4	Microscale Phase-Change Phenomena	152
5.4.1	Basic Modeling Concepts	154
5.4.2	Modified Cellular Automaton Model	157
5.4.3	Virtual Interface Tracking Model	161
5.5	Modeling of Crystal Growth	162
5.5.1	Modeling Approaches	163
5.5.2	RMF Control of Crystal Growth	165
5.5.3	Model Formulation and Validation Case	166

5.5.4	VGF–RMF Crystal Growth	173
5.6	Melting of Pure Calcium under the Influence of Natural Convection	180
5.6.1	State of Modeling	180
5.6.2	Model and Numerical Description	182
5.6.3	Results and Discussions	183
<b>6</b>	<b>Application I: Spin-Up of a Liquid Metal in Cylindrical Cavities</b>	<b>191</b>
6.1	Spin-Up of Isothermal Flow Driven by a Rotating Magnetic Field	193
6.1.1	Model Formulation	193
6.1.2	Governing Equations and Characteristic Scales	196
6.1.3	Numerical Techniques and Code Validation	197
6.1.4	The Physical Nature of Axisymmetric Instability	199
6.1.5	Numerical Results	201
6.1.6	Discussions	210
6.1.7	Short Summary	211
6.2	Impact of Buoyancy Force on Spin-Up Dynamics	212
<b>7</b>	<b>Application II: Laminar and Turbulent Flows Driven by an RMF</b>	<b>221</b>
7.1	Laminar Flows: State of the Art	221
7.1.1	Problem Formulation	221
7.1.2	Numerical Method	224
7.1.3	Numerical Results	225
7.1.4	Discussion	233
7.1.5	Short Summary	235
7.1.6	Estimation of Critical Taylor Number	235
7.2	Turbulent Flows	236
7.2.1	Axisymmetric Numerical Simulations	237
7.2.2	RANS: $k - \omega$ Turbulence Model	242
<b>8</b>	<b>Application III: Contactless Mixing of Liquid Metals</b>	<b>249</b>
8.1	Mixing under Zero-Gravity Conditions	249
8.1.1	Problem Formulation and Main Simplifications	250
8.1.2	Numerical Scheme and Validation Tests	256
8.1.3	Numerical Results	258
8.1.4	Discussion of Different Mixing Scenarios	269
8.1.5	Short Summary	272
8.2	The Impact of Gravity on Mixing	273
<b>9</b>	<b>Application IV: Electromagnetic Control of Binary Metal Alloys Solidification</b>	<b>277</b>
9.1	Control of a Binary Metal Alloy Solidification by Use of Alternating Current Fields	277
9.1.1	Control of Unidirectional Solidification of Al-Si Alloy by Use of RMF	278
9.1.2	Control of Side Cooled Systems by Use of RMF and TMF	285
9.2	Control of Solidification by Use of Steady Electromagnetic Fields	294
9.2.1	Problem and Model Formulation	295

9.2.2	Validation Test Cases	301
9.2.3	Numerical Results	303
9.3	The Impact of a Steady Electrical Current on Unidirectional Solidification	310
9.3.1	Problem and Model Formulation	311
9.3.2	Numerical Results and Discussions	314
9.4	The Impact of an Electric Field on the Shape of a Dendrite	317
9.4.1	Problem and Model Formulation	318
9.4.2	Scaling for Electroconvective Flows	321
9.4.3	Numerical Method and Code Validation	322
9.4.4	Numerical Results	324
9.5	The Impact of Parallel Applied Electric and Magnetic Fields on Dendritic Growth	328
9.5.1	Problem and Model Formulation	330
9.5.2	Numerical Results	331
