Introduction *xiii*

Section 1 **Structural comparisons**

1 Introduction 3

2 Grouping in the stressing of words, in metrical verse,
and in music 4

Nigel Fabb and Morris Halle

3 The Fabb–Halle approach to metrical stress theory as a
window on commonalities between music and language 22

Laura Dilley and J. Devin McAuley

4 Metrical structure and the prosodic hierarchy 32

Brechtje Post

5 Metre is music: a reply to Fabb and Halle 43

Bert Vaux and Neil Myler

6 Comments and a conjecture inspired by Fabb and Halle 51

Ian Roberts

7 Response to commentaries 67

Nigel Fabb and Morris Halle

Section 2 **Evolution**

8 Introduction 71

9 The biology and evolution of rhythm: unravelling a paradox 73

W. Tecumseh Fitch

10 Darwin's musical protolanguage: an increasingly
compelling picture 96

Simon Kirby

- 11 The significance of stones and bones: understanding the biology and evolution of rhythm requires attention to the archaeological and fossil record 103
Steven Mithen
- 12 A grand gesture: vocal and corporeal control in melody, rhythm, and emotion 110
Iain Morley
- 13 An ethnomusicological perspective on animal ‘music’ and human music: the paradox of ‘the paradox of rhythm’ 121
Elizabeth Tolbert
- 14 Reweaving the strands: welcoming diverse perspectives on the biology of music 128
W. Tecumseh Fitch

Section 3 **Learning and processing**

- 15 Introduction 137
- 16 Musical communication as alignment of brain states 139
Jamshed Bharucha, Meagan Curtis, and Kaivon Paroo
- 17 Communicating structure, affect, and movement 156
Zoltán Dienes, Gustav Kuhn, Xiuyan Guo, and Catherine Jones
- 18 Computer models of (music) cognition 169
Geraint A. Wiggins
- 19 Alignment in language and music 189
John N. Williams
- 20 Alignment of brain states: response to commentaries 195
Jamshed J. Bharucha, Kaivon Paroo, and Meagan Curtis

Section 4 **Neuroscience**

- 21 Introduction 201
- 22 Language, music, and the brain: a resource-sharing framework 204
Aniruddh D. Patel
- 23 Response to target article ‘Language, music, and the brain: a resource-sharing framework’ 224
Stefan Koelsch

- 24 Advances in neuroimaging techniques: implications for the shared syntactic integration resource hypothesis 235
Jessica A. Grahn
- 25 Schemas, not syntax: a reply to Patel 242
Justin London
- 26 Advancing the comparative study of linguistic and musical syntactic processing 248
Aniruddh D. Patel
- 27 Music, language, and modularity in action 254
Isabelle Peretz
- 28 Human subcortical auditory function provides a new conceptual framework for considering modularity 269
Erika Skoe and Nina Kraus
- 29 What remains of modularity? 283
Mireille Besson and Daniele Schön
- 30 Language, music, and children's brains: a rhythmic timing perspective on language and music as cognitive systems 292
Usha Goswami
- 31 Towards the role of working memory in pitch processing in language and music 302
Leigh VanHandel, Jennie Wakefield, and Wendy K. Wilkins
- 32 Modularity in music relative to speech: framing the debate 310
Isabelle Peretz

Section 5 **Conclusion**

- 33 Music as a social and cognitive process 315
Ian Cross
