

Contents

1	Introduction	1
1.1	Polymers	1
1.2	Phase diagram	2
1.3	Yielding of polymers	4
1.4	Asymmetric effects	6
1.5	Scope of thesis	6
1.6	Contents of thesis	6
2	Experimental work and molecular theories of yielding	9
2.1	Introduction	9
2.2	Mechanical behaviour of thermoplastics under tension test	12
2.3	Asymmetric effects between tension and compression	20
2.4	Strain rate effect	23
2.5	Temperature effects	24
2.6	Relaxation tests	26
2.7	Molecular theories of yielding	27
2.7.1	Reduction of glass transition temperature by stress application	27
2.7.2	Stress-induced increase in free volume	28
2.7.3	Break-down of entanglements under stress	28
2.7.4	Eyring model	28
2.7.5	Robertson model	29
2.7.6	Theoretical shear strength - Frank's modification of Frenkel model	29
2.7.7	Disclinations	30
3	Stress mode dependent elasto-viscoplasticity at small strains	33
3.1	Introduction	33
3.2	Framework for stress mode dependent elasto-viscoplasticity at small strains	34
3.2.1	Kinematics	34
3.2.2	Dissipation inequality	34
3.2.3	Flow rule for asymmetric elasto-viscoplasticity	35
3.3	Formulation of stress mode related weighting functions at small strains	36
3.4	Modelling of stress mode dependent elasto-viscoplasticity at small strains	38
3.4.1	Prototype model	38
3.4.2	Thermodynamic consistency	40
3.5	Numerical implementation at small strains	40
3.5.1	Integration scheme	41

3.5.2	Local iteration	42
3.5.3	Algorithmic tangent modulus	42
3.6	Parameter identification	44
3.7	Results and Discussion	45
4	Stress mode dependent thermoviscoplasticity at large strains	47
4.1	Introduction	47
4.2	Framework for stress mode dependent thermoviscoplasticity at large strains	48
4.2.1	Kinematics	48
4.2.2	Entropy inequality principle	49
4.2.3	Flow rule for asymmetric thermoviscoplasticity	50
4.3	Formulation of stress mode related weighting functions at large strains	52
4.4	Modelling of stress mode dependent thermoviscoplasticity at large strains	53
4.4.1	Prototype model	53
4.4.2	Thermodynamic consistency	55
4.5	Numerical implementation at large strains	55
4.5.1	Integration scheme	56
4.5.2	Algorithmic tangent modulus	57
4.6	Results and Discussion	57
5	Simulation of laser transmission welding	59
5.1	Introduction	59
5.2	Process of laser transmission welding	60
5.3	Theoretical Principles	62
5.4	Modelling of laser transmission welding	65
5.5	Results and Discussion	67
5.5.1	Temperature distribution	68
5.5.2	Evolution of equivalent inelastic strain with temperature	70
5.5.3	Residual stresses	71
5.5.4	Effect of welding parameters	74
5.5.5	Conclusion	76
6	Finite elasto-plastic model including asymmetric effects	77
6.1	Introduction	77
6.2	Finite elasto-plastic framework	78
6.2.1	Kinematics	78
6.2.2	Free Helmholtz energy	78
6.2.3	Dissipation inequality	79
6.2.4	Flow rule for elasto-plasticity	79
6.3	Modelling of asymmetric effects	80
6.3.1	Prototype model	80
6.3.2	Thermodynamic consistency	82
6.4	Numerical implementation	82
6.4.1	Integration scheme	82
6.4.2	Local iteration	84
6.4.3	Algorithmic tangent modulus	84
6.5	Parameter identification	84
6.6	Simulation of cold drawing process	85

7	Modelling and simulation of induced anisotropy	91
7.1	Introduction	91
7.2	Framework for elasto-plasticity including induced anisotropy	92
7.2.1	Kinematics	92
7.2.2	Dissipation inequality	93
7.2.3	Yield function	93
7.2.4	Evolution equations	94
7.3	Modelling of elasto-plasticity including induced anisotropy	94
7.3.1	Prototype model	94
7.3.2	Algorithm to calculate anisotropic tensor	96
7.4	Numerical implementation	97
7.4.1	Integration scheme	97
7.4.2	Local iteration	97
7.4.3	Algorithmic tangent modulus	98
7.5	Parameter identification	99
7.6	Simulation of tension test	100
8	Summary and outlook	103
A	Basic concepts of tensor calculus for multiplicative plasticity	105
