Foreword by Albert Tarantola *page* ix
Preface xi
List of programs xiii
List of symbols xv
1 Introduction 1
2 General overview 5
2.1 A quick tour of the graphical user interface 5
2.2 A typical geostatistical analysis using SGeMS 5
2.2.1 Loading data into an SGeMS project 8
2.2.2 Exploratory data analysis (EDA) 10
2.2.3 Variogram modeling 10
2.2.4 Creating a grid 12
2.2.5 Running a geostatistics algorithm 13
2.2.6 Displaying the results 14
2.2.7 Post-processing the results with Python 19
2.2.8 Saving the results 21
2.2.9 Automating tasks 21
2.3 Data file formats 23
2.4 Parameter files 24
2.5 Defining a 3D ellipsoid 26
3 Geostatistics: a recall of concepts 29
3.1 Random variable 30
3.2 Random function 33
3.2.1 Simulated realizations 34
3.2.2 Estimated maps 37
3.3 Conditional distributions and simulations 38
3.3.1 Sequential simulation 40
3.3.2 Estimating the local conditional distributions 42

3.4 Inference and stationarity 44
3.5 The variogram, a 2-point statistics 48
3.6 The kriging paradigm 50
3.6.1 Simple kriging 51
3.6.2 Ordinary kriging and other variants 54
3.6.3 Kriging with linear average variable 57
3.6.4 Cokriging 59
3.6.5 Indicator kriging 61
3.7 An introduction to mp statistics 62
3.8 Two-point simulation algorithms 65
3.8.1 Sequential Gaussian simulation 66
3.8.2 Direct sequential simulation 67
3.8.3 Direct error simulation 68
3.8.4 Indicator simulation 69
3.9 Multiple-point simulation algorithms 71
3.9.1 Single normal equation simulation (*SNESIM*) 71
3.9.2 Filter-based algorithm (*FILTERSIM*) 72
3.10 The nu/tau expression for combining conditional probabilities 74
3.11 Inverse problem 79
4 Data sets and SGeMS EDA tools 80
4.1 The data sets 80
4.1.1 The 2D data set 80
4.1.2 The 3D data set 81
4.2 The SGeMS EDA tools 84
4.2.1 Common parameters 85
4.2.2 Histogram 85
4.2.3 Q-Q plot and P-P plot 87
4.2.4 Scatter plot 87
5 Variogram computation and modeling 90
5.1 Variogram computation in SGeMS 92
5.1.1 Selecting the head and tail properties 92
5.1.2 Computation parameters 93
5.1.3 Displaying the computed variograms 98
5.2 Variogram modeling in SGeMS 98
6 Common parameter input interfaces 101
6.1 Algorithm panel 101
6.2 Selecting a grid and property 102
6.3 Selecting multiple properties 103
6.4 Search neighborhood 104

6.5 Variogram 104
6.6 Kriging 105
6.7 Line entry 105
6.8 Non-parametric distribution 106
6.9 Errors in parameters 108
7 Estimation algorithms 109
7.1 *KRIGING*: univariate kriging 109
7.2 *INDICATOR KRIGING* 113
7.3 *COKRIGING*: kriging with secondary data 119
7.4 *BKRIG*: block kriging estimation 122
8 Stochastic simulation algorithms 132
8.1 Variogram-based simulations 132
8.1.1 *LUSIM*: LU simulation 133
8.1.2 *SGSIM*: sequential Gaussian simulation 135
8.1.3 *COSGSIM*: sequential Gaussian co-simulation 139
8.1.4 *DSSIM*: direct sequential simulation 143
8.1.5 *SISIM*: sequential indicator simulation 147
8.1.6 *COSISIM*: sequential indicator co-simulation 153
8.1.7 *BSSIM*: block sequential simulation 157
8.1.8 *BESIM*: block error simulation 163
8.2 Multiple-point simulation algorithms 168
8.2.1 *SNESIM*: single normal equation simulation 169
8.2.2 *FILTERSIM*: filter-based simulation 191
9 Utilities 215
9.1 *TRANS*: histogram transformation 215
9.2 *TRANSCAT*: categorical transformation 218
9.3 POSTKRIGING: post-processing of kriging estimates 222
9.4 *POSTSIM*: post-processing of realizations 224
9.5 *NU-TAU MODEL*: combining probability fields 227
9.6 *BCOVAR*: block covariance calculation 228
9.7 *IMAGE PROCESSING* 233
9.8 *MOVING WINDOW*: moving window statistics 234
9.9 *TIGENERATOR*: object-based image generator 237
9.9.1 Object interaction 239
10 Scripting, commands and plug-ins 245
10.1 Commands 245
10.1.1 Command lists 246
10.1.2 Execute command file 248

10.2 Python script 249
10.2.1 SGeMS Python modules 250
10.2.2 Running Python scripts 250
10.3 Plug-ins 252
Bibliography 254
Index 260
