

<i>List of Contributors</i>	xi
<i>Preface</i>	xiii
<b>Chapter 1 Anatomy and physiology of major organ systems</b>	<b>1</b>
<i>Ray K. Iles, Iona Collins and Suzanne M. Docherty</i>	
1.1 The skeletal system	1
1.2 The digestive system	6
1.3 The cardiovascular system	11
1.4 The urinary system	17
1.5 Respiratory system	21
1.6 The nervous system	23
1.7 The endocrine system	31
Bibliography	33
<b>Chapter 2 Pathophysiology</b>	<b>35</b>
<i>Suzanne M. Docherty</i>	
2.1 Pathophysiology: a definition	35
2.2 Introduction to epidemiology	35
2.3 Introduction to pharmacology	38
2.4 Gastroenterology	44
2.5 Liver, biliary tract and pancreatic disease	50
2.6 Rheumatology	56
2.7 Urinary tract disease	59
2.8 Cardiovascular disease	65
2.9 Respiratory disease	76
2.10 Endocrine disease	80
Bibliography	88
<b>Chapter 3 Clinical cell biology and genetics</b>	<b>89</b>
<i>Ray K. Iles and Stephen A. Butler</i>	
3.1 The cell	89
3.2 Genetics	103
3.3 Human genetic disorders	116
3.4 Important techniques in molecular cell biology	136
Bibliography	138

<b>Chapter 4 Cellular pathology</b>	<b>139</b>
<i>Christopher M. Stonard and Jennifer H. Stonard</i>	
Part I: Principles of cellular pathology	139
4.1 Structure and function of normal cells, tissues and organs	139
4.2 Tissues and organs	140
4.3 Cellular responses to injury	141
4.4 Tissue responses to injury: acute inflammation	143
4.5 Tissue responses to injury: chronic inflammation	149
4.6 Healing and repair	151
4.7 Hyperplasia and hypertrophy	154
4.8 Atherosclerosis	155
4.9 Thrombosis and embolism	157
4.10 Ischaemia and infarction	159
4.11 Amyloid and amyloidosis	160
4.12 Infections of histological importance	162
4.13 Metaplasia, dysplasia and carcinoma <i>in situ</i>	165
4.14 Neoplasia	168
Part II: Clinical application and laboratory techniques	175
4.15 Sampling modalities	175
4.16 Fixation	178
4.17 Specimen dissection	180
4.18 Processing and embedding	182
4.19 Microtomy	184
4.20 Standard staining methods and procedures	186
4.21 Frozen section	190
4.22 Immunohistochemistry	191
4.23 Cytopathology	196
4.24 Electron microscopy	197
4.25 <i>In situ</i> hybridization	201
Bibliography	203
<b>Chapter 5 Clinical chemistry</b>	<b>205</b>
<i>Ray K. Iles and Stephen A. Butler</i>	
Introduction	205
Part I: Analytical methods	205
5.1 Sample collection	205
5.2 Analytical methods in clinical chemistry laboratories	210
5.3 Summary: common clinical tests for sample analytes	231
Part II: Clinical assessments	232
5.4 Urea and electrolytes (U and Es)	232
5.5 Metabolism and gastrointestinal markers	234
5.6 Renal function tests	236

5.7	Liver function tests	237
5.8	Heart disease and lipid disorder tests	238
5.9	Pancreatic function tests	240
5.10	Bone disease assessment	241
5.11	Endocrinological assessments	241
5.12	Pregnancy tests and pregnancy clinical chemistry	249
5.13	Therapeutic drug monitoring and toxicology	251
5.14	Clinical chemistry at the extremes of age	253
5.15	Cancer biomarkers	254
	Bibliography	259
Chapter 6	<b>Medical microbiology</b>	261
	<i>Sarah J. Furrows and Catherine S. Fontinelle</i>	
	Introduction	261
6.1	Overview of microorganisms	261
6.2	Laboratory investigation of infection	265
6.3	Bacteria	277
6.4	Fungi	284
6.5	Parasitology – protozoa and helminths	288
6.6	Viruses	290
6.7	Prions	297
6.8	Infections in the immunocompromised patient	298
6.9	Healthcare associated infections	299
6.10	Antimicrobial agents	302
6.11	Vaccines	307
6.12	Conclusion	309
	Bibliography	309
Chapter 7	<b>Clinical immunology</b>	311
	<i>Ray K. Iles and Ivan M. Roitt</i>	
	Part I: The fundamentals of immunology	311
7.1	Overview of the immune system	311
7.2	Overview of the immune response	316
7.3	MHC genotyping, autoimmunity and susceptibility to disease	321
7.4	Physical age and immunocompetency	322
	Part II: Laboratory investigations and immune assessments	323
7.5	Inflammation and chronic infection	323
7.6	Autoimmune diseases	324
7.7	Transplant rejection	325
7.8	Hypersensitivities	326
7.9	Immune deficiency	326
	Bibliography	328

<b>Chapter 8</b>	<b>Haematology and transfusion science</b>	<b>329</b>
	<i>Suzanne M. Docherty</i>	
8.1	Introduction and components of blood	329
8.2	Routine laboratory blood tests	332
8.3	Haemopoiesis	336
8.4	Red blood cell structure, disorders and metabolism	337
8.5	Haemoglobin	342
8.6	Anaemia	353
8.7	Benign white blood cell disorders	359
8.8	Haemostasis	361
8.9	Coagulation disorders	366
8.10	Myeloproliferative disorders	371
8.11	Haematological malignancies	373
8.12	Complement	378
8.13	Blood transfusion	380
8.14	Blood products	390
8.15	Haemopoetic stem cell transplantation	393
	Bibliography	395
<b>Chapter 9</b>	<b>Professional practice and biomedical science</b>	<b>397</b>
	<i>David Ricketts</i>	
9.1	What is a biomedical scientist?	397
9.2	The IBMS	397
9.3	Professional practice and the role of the HPC	398
9.4	Standards of proficiency – biomedical scientists	399
9.5	Expectations of a health professional	400
9.6	Professional relationships	401
9.7	The skills required for the application of practice	401
9.8	Knowledge, understanding and skills	402
9.9	Standards of conduct, performance and ethics	403
9.10	CPD	403
9.11	Critical reflection	404
9.12	IBMS CPD scheme	404
9.13	The professional biomedical scientist as an agent for change in the wider healthcare setting	405
	<i>Appendix</i>	407
	<i>Index</i>	413
