## TABLE OF CONTENTS

- vii** Introduction to *Antimicrobial Therapeutics Reviews: Antibiotics that target the ribosome*  
*Karen Bush*
- 1** On the specificity of antibiotics targeting the large ribosomal subunit  
*Daniel N. Wilson*
- 17** The history of the tetracyclines  
*Mark L. Nelson and Stuart B. Levy*
- 33** Macrolide antibiotics in the ribosome exit tunnel: species-specific binding and action  
*Krishna Kannan and Alexander S. Mankin*
- 48** The oxazolidinones: past, present, and future  
*Karen Joy Shaw and Michael R. Barbachyn*
- 71** Are pleuromutilin antibiotics finally fit for human use?  
*Rodger Novak*
- 82** Plasmid-mediated resistance to protein biosynthesis inhibitors in staphylococci  
*Stefan Schwarz, Andrea T. Feßler, Tomasz Hauschild, Corinna Kehrenberg, and Kristina Kadlec*
- 104** New approaches for treating staphylococcal biofilm infections  
*Megan R. Kiedrowski and Alexander R. Horswill*

- 122** Antibiotics in development targeting protein synthesis  
*Joyce A. Sutcliffe*
- 153** Understanding the regulatory hurdles for antibacterial drug development in the post-Ketek world  
*Roger M. Echols*
- 163** Appendix: Selected article reprinted from *Annals of the New York Academy of Sciences*, Volume 51: 177–181 (1948).  
Aureomycin: a product of the continuing search for new antibiotics  
*B.M. Duggar*
- Online only*
- smFRET approaches to determine MOA of antibiotics binding to the ribosome  
*Scott Blanchard*
