<b>Preface</b>	<b>vii</b>
<b>Preface to Second Edition</b>	<b>ix</b>
<b>Preface to First Edition</b>	<b>xi</b>
<b>Acknowledgments</b>	<b>xiii</b>
<b>Chapter 1 Introduction</b>	<b>1</b>
I Historical Developments . . . . .	4
I.1 Natural Accelerators . . . . .	5
I.2 Electrostatic Accelerators . . . . .	5
I.3 Induction Accelerators . . . . .	6
I.4 Radio-Frequency (RF) Accelerators . . . . .	8
I.5 Colliders and Storage Rings . . . . .	16
I.6 Synchrotron Radiation Storage Rings . . . . .	18
II Layout and Components of Accelerators . . . . .	18
II.1 Acceleration Cavities . . . . .	19
II.2 Accelerator Magnets . . . . .	20
II.3 Other Important Components . . . . .	22
III Accelerator Applications . . . . .	22
III.1 High Energy and Nuclear Physics . . . . .	22
III.2 Solid-State and Condensed-Matter Physics . . . . .	23
III.3 Other Applications . . . . .	23
Exercise 1: Basics . . . . .	24
<b>Chapter 2 Transverse Motion</b>	<b>33</b>
I Hamiltonian for Particle Motion in Accelerators . . . . .	34
I.1 Hamiltonian in Frenet-Serret Coordinate System . . . . .	35
I.2 Magnetic Field in Frenet-Serret Coordinate System . . . . .	37
I.3 Equation of Betatron Motion . . . . .	38
I.4 Particle Motion in Dipole and Quadrupole Magnets . . . . .	39
Exercise 2.1 . . . . .	40

II	Linear Betatron Motion . . . . .	44
II.1	Transfer Matrix and Stability of Betatron Motion . . . . .	44
II.2	Courant–Snyder Parametrization . . . . .	47
II.3	Floquet Transformation . . . . .	48
II.4	Action-Angle Variable and Floquet Transformation . . . . .	53
II.5	Courant–Snyder Invariant and Emittance . . . . .	55
II.6	Stability of Betatron Motion: A FODO Cell Example . . . . .	60
II.7	Symplectic Condition . . . . .	61
II.8	Effect of Space-Charge Force on Betatron Motion . . . . .	62
	Exercise 2.2 . . . . .	69
III	Effect of Linear Magnet Imperfections . . . . .	80
III.1	Closed-Orbit in the Presence of Dipole Field Error . . . . .	80
III.2	Extended Matrix Method for the Closed Orbit . . . . .	86
III.3	Application of Dipole Field Error . . . . .	86
III.4	Quadrupole Field (Gradient) Errors . . . . .	95
III.5	Basic Beam Observation of Transverse Motion . . . . .	99
III.6	Application of Quadrupole Field Error . . . . .	102
III.7	Beam Spectra . . . . .	104
III.8	Beam Injection and Extraction . . . . .	108
III.9	Mechanisms of Emittance Dilution and Diffusion . . . . .	110
	Exercise 2.3 . . . . .	115
IV	Off-Momentum Orbit . . . . .	122
IV.1	Dispersion Function . . . . .	122
IV.2	$\mathcal{H}$ -Function, Action, and Integral Representation . . . . .	126
IV.3	Momentum Compaction Factor . . . . .	129
IV.4	Dispersion Suppression and Dispersion Matching . . . . .	132
IV.5	Achromat Transport Systems . . . . .	134
IV.6	Transport Notation . . . . .	136
IV.7	Experimental Measurements of Dispersion Function . . . . .	137
IV.8	Transition Energy Manipulation . . . . .	138
IV.9	Minimum $\langle \mathcal{H} \rangle$ Modules . . . . .	149
	Exercise 2.4 . . . . .	152
V	Chromatic Aberration . . . . .	160
V.1	Chromaticity Measurement and Correction . . . . .	161
V.2	Nonlinear Effects of Chromatic Sextupoles . . . . .	165
V.3	Chromatic Aberration and Correction . . . . .	165
V.4	Lattice Design Strategy . . . . .	170
	Exercise 2.5 . . . . .	171
VI	Linear Coupling . . . . .	173
VI.1	The Linear Coupling Hamiltonian . . . . .	173
VI.2	Effects of an Isolated Linear Coupling Resonance . . . . .	175
VI.3	Experimental Measurement of Linear Coupling . . . . .	179

VI.4	Linear Coupling Correction with Skew Quadrupoles . . . . .	182
VI.5	Linear Coupling Using Transfer Matrix Formalism . . . . .	183
	Exercise 2.6 . . . . .	184
VII	Nonlinear Resonances . . . . .	188
VII.1	Nonlinear Resonances Driven by Sextupoles . . . . .	188
VII.2	Higher-Order Resonances . . . . .	195
VII.3	Nonlinear Detuning from Sextupoles and Octupoles . . . . .	197
VII.4	Betatron Tunes and Nonlinear Resonances . . . . .	198
VII.5	Emittance Growth and Dynamic Aperture . . . . .	199
	Exercise 2.7 . . . . .	203
VIII	Collective Instability and Landau Damping . . . . .	209
VIII.1	Impedance . . . . .	209
VIII.2	Transverse Wave Modes . . . . .	212
VIII.3	Effect of Wakefield on Transverse Wave . . . . .	213
VIII.4	Frequency Spread and Landau Damping . . . . .	217
	Exercise 2.8 . . . . .	220
IX	Synchro-Betatron Hamiltonian . . . . .	223
	Exercise 2.9 . . . . .	227

## **Chapter 3 Synchrotron Motion 229**

I	Longitudinal Equation of Motion . . . . .	230
I.1	The Synchrotron Hamiltonian . . . . .	233
I.2	The Synchrotron Mapping Equation . . . . .	234
I.3	Evolution of Synchrotron Phase-Space Ellipses . . . . .	235
I.4	Some Practical Examples . . . . .	236
I.5	Summary of Synchrotron Equations of Motion . . . . .	237
	Exercise 3.1 . . . . .	238
II	Adiabatic Synchrotron Motion . . . . .	240
II.1	Fixed Points . . . . .	240
II.2	Bucket Area . . . . .	241
II.3	Small-Amplitude Oscillations and Bunch Area . . . . .	243
II.4	Small-Amplitude Synchrotron Motion at the UFP . . . . .	246
II.5	Synchrotron Motion for Large-Amplitude Particles . . . . .	246
II.6	Experimental Tracking of Synchrotron Motion . . . . .	248
	Exercise 3.2 . . . . .	250
III	RF Phase and Voltage Modulations . . . . .	255
III.1	Normalized Phase-Space Coordinates . . . . .	255
III.2	RF Phase Modulation and Parametric Resonances . . . . .	258
III.3	Measurements of Synchrotron Phase Modulation . . . . .	262
III.4	Effects of Dipole Field Modulation . . . . .	266
III.5	RF Voltage Modulation . . . . .	274
III.6	Measurement of RF Voltage Modulation . . . . .	279

	Exercise 3.3 . . . . .	281
IV	Nonadiabatic and Nonlinear Synchrotron Motion . . . . .	284
	IV.1 Linear Synchrotron Motion Near Transition Energy . . . . .	285
	IV.2 Nonlinear Synchrotron Motion at $\gamma \approx \gamma_T$ . . . . .	288
	IV.3 Beam Manipulation Near Transition Energy . . . . .	291
	IV.4 Synchrotron Motion with Nonlinear Phase Slip Factor . . . . .	292
	IV.5 The QI Dynamical Systems . . . . .	294
	Exercise 3.4 . . . . .	298
V	Beam Manipulation in Synchrotron Phase Space . . . . .	299
	V.1 RF Frequency Requirements . . . . .	300
	V.2 Capture and Acceleration of Proton and Ion Beams . . . . .	302
	V.3 Bunch Compression and Rotation . . . . .	304
	V.4 Debunching . . . . .	308
	V.5 Beam Stacking and Phase Displacement Acceleration . . . . .	308
	V.6 Double rf Systems . . . . .	309
	V.7 The Barrier RF Bucket . . . . .	316
	Exercise 3.5 . . . . .	322
VI	Fundamentals of RF Systems . . . . .	324
	VI.1 Pillbox Cavity . . . . .	324
	VI.2 Low Frequency Coaxial Cavities . . . . .	326
	VI.3 Beam Loading . . . . .	334
	VI.4 Beam Loading Compensation and Robinson Instability . . . . .	336
	Exercise 3.6 . . . . .	339
VII	Longitudinal Collective Instabilities . . . . .	342
	VII.1 Beam Spectra of Synchrotron Motion . . . . .	343
	VII.2 Collective Microwave Instability in Coasting Beams . . . . .	348
	VII.3 Longitudinal Impedance . . . . .	349
	VII.4 Single Bunch Microwave Instability . . . . .	352
	Exercise 3.7 . . . . .	359
VIII	Introduction to Linear Accelerators . . . . .	361
	VIII.1 Historical Milestones . . . . .	361
	VIII.2 Fundamental Properties of Accelerating Structures . . . . .	364
	VIII.3 Particle Acceleration by EM Waves . . . . .	366
	VIII.4 Longitudinal Particle Dynamics in a Linac . . . . .	378
	VIII.5 Transverse Beam Dynamics in a Linac . . . . .	381
	Exercise 3.8 . . . . .	385

**Chapter 4 Physics of Electron Storage Rings 391**

I	Fields of a Moving Charged Particle . . . . .	396
	I.1 Non-relativistic Reduction . . . . .	398
	I.2 Radiation Field for Particles at Relativistic Velocities . . . . .	398
	I.3 Frequency and Angular Distribution . . . . .	400

	I.4	Quantum Fluctuation . . . . .	406
		Exercise 4.1 . . . . .	408
II		Radiation Damping and Excitation . . . . .	410
	II.1	Damping of Synchrotron Motion . . . . .	410
	II.2	Damping of Betatron Motion . . . . .	414
	II.3	Damping Rate Adjustment . . . . .	417
	II.4	Radiation Excitation and Equilibrium Energy Spread . . . . .	420
	II.5	Radial Bunch Width and Distribution Function . . . . .	424
	II.6	Vertical Beam Width . . . . .	426
	II.7	Beam Lifetime . . . . .	427
	II.8	Summary: Radiation Integrals . . . . .	432
		Exercise 4.2 . . . . .	433
III		Emittance in Electron Storage Rings . . . . .	438
	III.1	Emittance of Synchrotron Radiation Lattices . . . . .	438
	III.2	Insertion Devices . . . . .	450
	III.3	Effect of IDs on Beam Dynamics . . . . .	456
	III.4	Beam Physics of High Brightness Storage Rings . . . . .	461
		Exercise 4.3 . . . . .	464
<b>Chapter 5 Special Topics in Beam Physics</b>			<b>469</b>
I		Free Electron Laser (FEL) . . . . .	470
	I.1	Small Signal Regime . . . . .	472
	I.2	Interaction of the Radiation Field with the Beam . . . . .	477
	I.3	High Gain FEL Facilities . . . . .	480
		Exercise 5.1 . . . . .	480
II		Beam-Beam Interaction . . . . .	482
	II.1	The Beam-Beam Force in Round Beam Geometry . . . . .	482
	II.2	The Coherent Beam-Beam Effects . . . . .	485
	II.3	Nonlinear Beam-Beam Effects . . . . .	486
	II.4	Experimental Observations and Numerical Simulations . . . . .	487
	II.5	Beam-Beam Interaction in Linear Colliders . . . . .	491
		Exercise 5.2 . . . . .	492
<b>Appendix A Classical Mechanics and Analysis</b>			<b>495</b>
I		Hamiltonian Dynamics . . . . .	495
	I.1	Canonical Transformations . . . . .	495
	I.2	Fixed Points . . . . .	496
	I.3	Poisson Bracket . . . . .	496
	I.4	Liouville Theorem . . . . .	496
	I.5	Floquet Theorem . . . . .	497
II		Stochastic Beam Dynamics . . . . .	498
	II.1	Central Limit Theorem . . . . .	498

II.2	Langevin Equation of Motion . . . . .	499
II.3	Fokker-Planck Equation . . . . .	501
III	Model Independent Analysis . . . . .	502
III.1	Model Independent Analysis . . . . .	502
III.2	Independent Component Analysis . . . . .	503
<b>Appendix B</b>	<b>Numerical Methods and Physical Constants</b>	<b>505</b>
I	Fourier Transform . . . . .	505
I.1	Nyquist Sampling Theorem . . . . .	505
I.2	Discrete Fourier Transform . . . . .	506
I.3	Digital Filtering . . . . .	507
I.4	Some Simple Fourier Transforms . . . . .	508
II	Cauchy Theorem and the Dispersion Relation . . . . .	508
II.1	Cauchy Integral Formula . . . . .	508
II.2	Dispersion Relation . . . . .	509
III	Useful Handy Formulas . . . . .	509
III.1	Generating Functions for the Bessel Functions . . . . .	509
III.2	The Hankel Transform . . . . .	510
III.3	The Complex Error Function [30] . . . . .	510
III.4	A Multipole Expansion Formula . . . . .	510
III.5	Cylindrical Coordinates . . . . .	510
III.6	Gauss' and Stokes' Theorems . . . . .	511
III.7	Vector Operation . . . . .	511
IV	Maxwell's Equations . . . . .	512
IV.1	Lorentz Transformation of EM Fields . . . . .	512
IV.2	Cylindrical Waveguides . . . . .	512
IV.3	Voltage Standing Wave Ratio . . . . .	514
V	Physical Properties and Constants . . . . .	515
	<b>Bibliography</b>	<b>519</b>
	<b>Index</b>	<b>521</b>
	<b>Symbols and Notations</b>	<b>529</b>
	<b>List of Tables</b>	<b>533</b>
