1 Introduction and Summary 1
References 8

2 Three Models and a Ground State 11
2.1 The Laughlin State and Its Parent Hamiltonian 11
2.1.1 Landau Level Quantization in the Planar Geometry 11
2.1.2 The Laughlin State 16
2.1.3 Fractionally Charged Quasiparticle Excitations 18
2.1.4 Fractional Statistics 20
2.1.5 Landau Level Quantization in the Spherical Geometry . . . 22
2.1.6 The Laughlin State and Its Parent Hamiltonian on the Sphere 27
2.2 The Haldane–Shastry Model 29
2.2.1 The $1/r^2$ Model of Haldane and Shastry 29
2.2.2 Symmetries and Integrability 30
2.2.3 Ground State Properties 31
2.2.4 Explict Solution 34
2.2.5 Factorization of the Hamiltonian 38
2.2.6 *Spinon Excitations and Fractional Statistics* 41
2.2.7 Young Tableaux and Many Spinon States 45
2.3 The Moore–Read State and Its Parent Hamiltonian 47
2.3.1 The Pfaffian State and Its Parent Hamiltonian 47
2.3.2 Quasiparticle Excitations and the Internal Hilbert Space 50
2.3.3 Majorana Fermions and Non-Abelian Statistics 51
2.3.4 The Pfaffian State and Its Parent Hamiltonian on the Sphere 56
2.4 An $S=1$ *Spin Liquid State Described by a Pfaffian* 57
2.4.1 The Ground State 57
2.4.2 Symmetries 58

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.4.3 Schwinger Bosons 61
2.4.4 Generation by Projection from Gutzwiller States 62
2.4.5 Topological Degeneracies and Non-Abelian Statistics . . . 64
2.4.6 Generalization to Arbitrary Spin S 67
2.4.7 Momentum Spacings and Topological Degeneracies for Arbitrary Spin S 68
References 72

3 From a Laughlin State to the Haldane–Shastry Model 79
3.1 General Considerations 79
3.1.1 Comparison of the Models 79
3.1.2 A Hole at a Pole 81
3.2 Hilbert Space Renormalization 82
3.3 Fourier Transformation 86
3.3.1 Particle Creation and Annihilation Operators 86
3.3.2 Renormalized Matrix Elements 87
3.3.3 An Alternative Derivation 90
3.4 The Defining Condition for the Gutzwiller State 91
3.4.1 Annihilation Operators 91
3.4.2 Direct Verification 92
3.4.3 The Role of the Hole 93
3.5 Rotations and Spherical Tensor Operators 94
3.5.1 Representations of Rotations 94
3.5.2 Tensor Operators 95
3.5.3 Products of Tensor Operators 96
3.6 Construction of a Parent Hamiltonian for the Gutzwiller State 98
3.6.1 Translational, Time Reversal, and Parity Symmetry 98
3.6.2 Spin Rotation Symmetry 100
3.6.3 An Alternative Derivation 101
3.7 The Rapidity Operator and More 102
3.7.1 Annihilation Operators Which Transform Even Under T 102
3.7.2 Annihilation Operators Which Transform Odd Under T 104
3.8 Concluding Remarks 106
References 106

4 From a Bosonic Pfaffian State to an $S = 1$ Spin Chain 109
4.1 General Considerations 109
4.1.1 A Model and a Ground State 109
4.1.2 Creation of a Quasihole 111
4.2 Hilbert Space Renormalization 112

4.3 Fourier Transformation . . . 113
4.3.1 Particle Creation and Annihilation Operators . . . 113
4.3.2 Substitution of Spin Flip Operators for Boson Operators . . . 114
4.3.3 Many Body Annihilation Operators . . . 115
4.3.4 Evaluation of $B^{\neq}_{m;\alpha_1,\alpha_2,\alpha_3}$ . . . 116
4.3.5 Evaluation of $B^{=}_{m;\alpha_1,\alpha_2}$ . . . 119
4.4 The Defining Condition for the $S = 1$ Pfaffian Chain . . . 122
4.4.1 Derivation . . . 122
4.4.2 A Second Condition . . . 124
4.4.3 Direct Verification . . . 125
4.5 Construction of a Parent Hamiltonian . . . 127
4.5.1 Translational, Time Reversal, and Parity Symmetry . . . 127
4.5.2 Spin Rotation Symmetry . . . 128
4.5.3 Evaluation of $\{T^0_{\alpha\alpha} T^0_{\beta\gamma}\}_0$ . . . 129
4.5.4 Writing Out the Hamiltonian . . . 132
4.6 Vector Annihilation Operators . . . 133
4.6.1 Annihilation Operators Which Transform Even Under T . . . 133
4.6.2 Annihilation Operators Which Transform Odd Under T . . . 136
4.7 Concluding Remarks . . . 138
References . . . 139

5 Generalization to Arbitrary Spin S . . . 141
5.1 A Critical Spin Liquid State With Spin S . . . 141
5.1.1 Generation Through Projection of Gutzwiller States . . . 141
5.1.2 Direct Verification of the Singlet Property . . . 142
5.2 The Defining Condition for the Spin S Chain . . . 144
5.2.1 Statement . . . 144
5.2.2 Direct Verification . . . 144
5.3 Construction of a Parent Hamiltonian . . . 146
5.3.1 Translational Symmetry . . . 146
5.3.2 Tensor Decomposition of $(S^+)^{2s}(S^-)^{2s}$ . . . 146
5.3.3 Time Reversal and Parity Symmetry . . . 151
5.3.4 Spin Rotation Symmetry . . . 152
5.4 Vector Annihilation Operators . . . 155
5.4.1 Annihilation Operators Which Transform Even Under T . . . 155
5.4.2 Annihilation Operators Which Transform Odd Under T . . . 157
5.4.3 Evaluation of $\{W^0_{\alpha\alpha\alpha} T^0_{\beta\gamma}\}_1$ . . . 159
5.4.4 Annihilation Operators Which Transform Odd Under T (Continued) . . . 161

5.5 Scalar Operators Constructed from Vectors. 164
5.5.1 Factorization of the Hamiltonian. 165
5.5.2 A Variation of the Model. 167
5.5.3 The Third Derivation. 169
5.6 The Case $S = \frac{1}{2}$ Once More 171
