

Contents

1	Introduction	1
1.1	Fundamental Situation	1
1.1.1	Motivation	2
1.1.2	Objectives of the Thesis	2
1.2	Structure of the Thesis	3
2	Foundations	5
2.1	The Basic Structure of the Internet	5
2.1.1	Autonomous Systems	5
2.1.2	The Routing Information Exchange in the Internet	7
2.2	Basic Demands on the Inter-AS Routing	9
2.3	The Border Gateway Protocol (BGP)	11
2.3.1	Distance- and Path-vector Routing	12
2.3.2	Operation of the Border Gateway Protocol	13
2.3.3	The BGP Path Selection Process	17
2.3.4	Information Reduction Techniques	20
2.4	General Assumptions	22
2.5	Conclusion	24
3	A Formal Model of BGP	25
3.1	Concepts to Formalize the BGP Routing	25
3.2	The extended Simple Path Vector Protocol (eSPVP)	27
3.2.1	Network and BGP Peering Graph	27
3.2.2	Signaling Paths	28
3.2.3	Path Selection Function	31
3.3	A Model of the BGP Update Process	33
3.4	Assumptions and Conventions	34
3.4.1	Assumption and Clarifications	34
3.4.2	Label Conventions	35
3.5	Conclusion	36
4	An Anomaly-free iBGP Routing	37
4.1	Literature Review	37
4.1.1	Session and Information Reduction Techniques	38
4.1.2	Anomalies in iBGP Routing Processes	39
4.2	iBGP Routing Anomalies	44
4.2.1	Cost-suboptimal Routing Decisions	45
4.2.2	Inconsistency – Deflection and Loops on Forwarding Routes	46
4.2.3	Diverging iBGP Update Processes	47
4.2.4	Non-deterministic iBGP Update Processes	47

4.3	Reasons for iBGP Routing Anomalies	48
4.3.1	Cost-suboptimal Routing Decisions	48
4.3.2	Inconsistency – Deflection and Loops on Forwarding Routes	49
4.3.3	Diverging and Non-deterministic iBGP Update Processes	52
4.4	Inherently Avoiding iBGP Routing Anomalies	52
4.4.1	Basic Constraints on the iBGP Configuration	53
4.4.2	Expressiveness	56
4.4.3	Consistency	58
4.4.4	Robustness	63
4.5	Analysis and Verification	64
4.5.1	Selection of Optimal Exit Paths	64
4.5.2	Consistent Optimal Exit Paths	66
4.6	Conclusion	78
5	An Anomaly-free iBGP Architecture	79
5.1	Specific Requirements on the iBGP Routing Architecture	79
5.2	Literature Review	81
5.2.1	Modified Path Selection Processes	82
5.2.2	Conform Network and Peering Topologies	85
5.2.3	<i>Additional Routing Information Advertisements</i>	87
5.2.4	Dynamic Update Process Analyses	90
5.3	iBGP Routing Architecture Alternatives	93
5.4	Conception of an Anomaly-free iBGP Architecture	95
5.4.1	Preliminary Considerations	95
5.4.2	Providing Information for an Anomaly-free Routing	96
5.4.3	Architecture Design	105
5.5	Implementing the iBGP Route Server Architecture	106
5.5.1	Routing Architecture Components	106
5.5.2	BGP Protocol Modifications	109
5.6	Error Protection	113
5.6.1	Problem Space	113
5.6.2	Error Protection Schemes	115
5.7	Architecture Discussion	119
5.7.1	Assessment of the Basic Architecture Properties	119
5.7.2	Criteria of Demarcation	121
5.8	Conclusion	123
6	Scalability Evaluation	125
6.1	Evaluation Environment	126
6.1.1	Evaluation Approaches	126
6.1.2	The Reference System – AS3320	127
6.1.3	Performance Indicators and Resulting Metric	129
6.2	Gathering Basic Performance Data	130
6.2.1	Basic Path Advertisement Data	130
6.2.2	Basic Update Frequency Data	139
6.2.3	Generalization	147
6.3	Analyzing the Scalability of Client Speakers	149
6.3.1	Expected Routing Table Sizes (Indicator I)	149
6.3.2	Expected Update Rates (Indicator II)	154
6.3.3	Required iBGP Interconnection (Indicator III)	155
6.3.4	Generalization	155

6.4	Analyzing the Scalability of Route Servers	156
6.4.1	Expected Routing Table Sizes (Indicator I)	156
6.4.2	Expected Update Rates (Indicator II)	160
6.4.3	Required iBGP Interconnection (Indicator III)	166
6.4.4	Generalization	166
6.5	Performance Improvements	168
6.6	Conclusion	170
7	Conclusion and Future Work	173
7.1	Conclusion	173
7.2	Future Work	175
A	Correctness of Internal BGP	177
A.1	Details on Anomalies in the iBGP Routing	177
A.1.1	Cost-suboptimal Routing	177
A.1.2	Inconsistency	178
A.2	Reasons of Routing Anomalies	179
A.2.1	Cost-suboptimal Routing	179
A.2.2	Inconsistency – Deflection and Loops on Forwarding Routes	181
A.3	Details on Avoiding Routing Anomalies	182
A.3.1	Relationship between Exit and Delivery Paths	182
A.3.2	Problems in Defining a Total Order	183
B	Error Protection	185
B.1	Error Model	185
B.1.1	Error Location	186
B.1.2	Error Classes	187
B.1.3	Error Correlation	188
B.2	Error Protection Schemes	189
B.2.1	Protecting the Basic Routing Functionality	189
B.2.2	Protecting the Anomaly-free iBGP Routing	192
