Preface	<i>xi</i>
Acknowledgement	<i>xv</i>
List of Abbreviations	<i>xix</i>

1	Introduction	1
2	Solid-State Reactions	5
2.1	Reactions Between Solid Compounds	5
2.1.1	Ceramic Method	5
2.1.1.1	An Example	6
2.1.1.2	General Aspects of Solid-State Reactions	8
2.1.2	Mechanochemical Synthesis	16
2.1.3	Carbothermal Reduction	17
2.1.4	Combustion Synthesis	22
2.1.4.1	Classification of Combustion Synthesis Reactions	26
2.1.5	Sintering	28
2.1.5.1	Stages of Sintering	30
2.1.5.2	Factors Affecting Sintering	31
2.1.5.3	Ceramics Processing	31
2.2	Solid–Gas Reactions	36
2.3	Intercalation Reactions	39
2.3.1	General Aspects	39
2.3.1.1	Mechanistic Aspects of Intercalation Reactions	43
2.3.2	Preparative Methods	44
2.3.2.1	Types of Intercalation Reactions	44
2.3.2.2	Intercalation of Polymers in Layered Systems	48
2.3.3	Pillaring of Layered Compounds	50
3	Formation of Solids from the Gas Phase	55
3.1	Chemical Vapor Transport	55
3.1.1	Halogen Lamps	56

Synthesis of Inorganic Materials, Third Edition. Ulrich Schubert and Nicola Hüsing.

3.1.2	Transport Reactions	59
3.2	Chemical Vapor Deposition	62
3.2.1	General Aspects	63
3.2.1.1	Equipment	67
3.2.1.2	Growth Rates	69
3.2.1.3	Selective Deposition	71
3.2.1.4	CVD and CVD-Related Techniques	72
3.2.1.5	Non-CVD Processes for the Gas-Phase Deposition of Thin Films	74
3.2.2	Metal CVD	77
3.2.2.1	Aluminum	78
3.2.2.2	Tungsten	81
3.2.2.3	Copper	82
3.2.3	Diamond CVD	84
3.2.4	CVD of Metal Oxides	87
3.2.4.1	SiO ₂ and Silicate Glasses	87
3.2.4.2	Yttrium Barium Copper Oxide (YBCO)	89
3.2.5	CVD of Metal Nitrides	90
3.2.6	CVD of Compound Semiconductors	92
3.2.7	Chemical Vapor Infiltration	96
3.3	Aerosol Processes	97
3.3.1	Aerosol Process Routes	100
3.3.2	Reactors	103
3.3.3	Products	105
3.3.4	Film Generation	107
4	Formation of Solids from Solutions and Melts	111
4.1	Glass	111
4.1.1	The Structural Theory of Glass Formation	113
4.1.2	Crystallization versus Glass Formation	117
4.1.3	Glass Melting	122
4.1.3.1	Raw Materials of Glass Production	123
4.1.3.2	Batch Melting	123
4.1.3.3	Fining of Melts	125
4.1.3.4	Homogenization of Melt	126
4.1.4	Metallic Glasses	126
4.1.4.1	Bulk Metallic Glasses	129
4.2	Precipitation	130
4.2.1	Monodisperse Crystals	132
4.2.2	Shape Control of Crystals	134
4.3	Biomaterials	135
4.3.1	Biogenic Materials and Biomineralization	136
4.3.1.1	Amorphous: Diatoms	138
4.3.1.2	Ordered Mesoscopic Crystalline Aggregates: Bone	140
4.3.1.3	Crystalline Materials	141
4.3.1.4	Mineralization Processes	142

4.3.2	Synthetic Biomaterials	146
4.3.2.1	Bioactive Ceramics and Glasses	148
4.3.2.2	Bone Substitutes	149
4.3.3	Biomimetic Materials Chemistry	149
4.4	Solvothermal Processes	155
4.4.1	Hydrothermal Synthesis of Single Crystals	155
4.4.1.1	General Aspects of Solvothermal Processes	156
4.4.1.2	Non-aqueous Solvents	162
4.4.2	Hydrothermal Synthesis	163
4.4.2.1	Synthesis of Zeolites	164
4.4.3	Hydrothermal Leaching	165
4.5	Sol–Gel Processes	165
4.5.1	The Physics of Sols	170
4.5.2	Sol–Gel Processing of Silicate Materials	173
4.5.2.1	Hydrolysis and Condensation Reactions	173
4.5.2.2	The Sol–Gel Transition (Gelation)	179
4.5.2.3	Aging	183
4.5.2.4	Drying	184
4.5.3	Sol–Gel Chemistry of Metal Oxides	185
4.5.3.1	Inorganic Precursors (Metal Salts)	185
4.5.3.2	Alkoxide Precursors	188
4.5.4	Inorganic–Organic Hybrid Materials	191
4.5.4.1	Embedding of Organic Molecules	192
4.5.4.2	Inorganic–Organic Hybrid Polymers	195
4.5.5	Non-hydrolytic Sol–Gel Processes	202
4.5.6	Aerogels	203
4.5.6.1	Drying Methods	204
4.5.6.2	Properties and Applications	207
5	Preparation and Modification of Inorganic Polymers	211
5.1	General Aspects	211
5.1.1	Polymeric Materials	213
5.1.2	Crosslinking	214
5.1.3	Preceramic Polymers	216
5.2	Polysiloxanes (Silicones)	219
5.2.1	Properties and Applications of Silicones	219
5.2.1.1	Silicone Oils	219
5.2.1.2	Silicone Elastomers	220
5.2.1.3	Silicone Resins	222
5.2.2	Structure of Silicones	223
5.2.3	Preparation of Silicones	224
5.2.3.1	Precursor Syntheses	224
5.2.3.2	Hydrolysis, Methanolysis, and Polycondensation Reactions	226
5.2.3.3	Equilibration and Ring-Opening Polymerization of Cyclosiloxanes	228

- 5.2.3.4 Curing ("Vulcanizing") 230
- 5.2.3.5 Polysiloxane Copolymers 232
- 5.3 Polyphosphazenes 233
- 5.3.1 Properties and Applications of Polyphosphazenes 233
- 5.3.2 Preparation and Modification 236
- 5.4 Polysilanes 239
- 5.4.1 Properties and Applications of Polysilanes 239
- 5.4.1.1 Effects Originating from the Substituents 239
- 5.4.1.2 Effects Originating from the Backbone 239
- 5.4.2 Preparation and Modification of Polysilanes 242
- 5.5 Polycarbosilanes 247
- 5.5.1 SiC Fibers from Polycarbosilanes (Yajima Process) 247
- 5.5.1.1 Preparation of SiC Fibers 248
- 5.5.2 Chemical Issues of Polymer Preparation, Curing, and Pyrolysis 249
- 5.5.2.1 Polymer Preparation 249
- 5.5.2.2 Crosslinking 252
- 5.5.2.3 Pyrolysis 253
- 5.6 Polysilazanes and Polyborosilazanes 254
- 5.6.1 Preparation of Polysilazanes and Polyborosilazanes 255
- 5.6.2 Curing and Pyrolysis Reactions 258
- 5.7 Other Inorganic Polymers 258
- 5.7.1 Preceramic Polymers for BN 259
- 5.7.2 Other Phosphorus-Containing Polymers 260
- 5.7.3 Polymers with S–N Backbones 262
- 5.8 Metal-Containing Polymers 262
- 5.8.1 One-Dimensional Coordination Polymers 263
- 5.8.2 Metal-organic Frameworks 265

- 6 Templated Materials 275**
- 6.1 Introduction to Porosity and High Surface Area Materials 276
- 6.2 Metallic Foams and Porous Metals 280
- 6.2.1 Casting Techniques 281
- 6.2.1.1 Foaming 281
- 6.2.1.2 Lost-Foam Casting 282
- 6.2.1.3 Infiltration 282
- 6.2.2 Gas–Eutectic Transformation 283
- 6.2.3 Powder Metallurgy 284
- 6.2.3.1 Powder Sintering 284
- 6.2.3.2 Compacting with Foaming Agents 285
- 6.2.4 Metal Deposition 286
- 6.3 Soft Templates/Endotemplating 286
- 6.3.1 Templating with Molecules 287
- 6.3.2 Templating with Supramolecular Arrangements of Molecules 294
- 6.4 Hard Templates/Exotemplating 300
- 6.4.1 Nanocasting 301

- 6.4.1.1 Ordered Silica as Template/Mold 301
- 6.4.1.2 Colloidal Crystals as Templates/Molds 302
- 6.5 Templating Towards Multiscale Porosity 304
- 6.5.1 Dual or Multiple Templating 305
- 6.5.2 Phase-Separation Strategies 306
- 6.6 Incorporation of Functional Groups into Porous Materials 308

7 Nanostructured Materials 313

- 7.1 The Origin of Nanoeffects 314
- 7.2 Properties of Nanomaterials 316
 - 7.2.1 Properties Originating from Surface Effects 316
 - 7.2.1.1 Chemical Properties 316
 - 7.2.1.2 Photocatalysis 317
 - 7.2.1.3 Melting Points 318
 - 7.2.1.4 Phase Transitions 318
 - 7.2.1.5 Diffusion and Sinterability 319
 - 7.2.2 Properties Originating from Quantum Confinement 319
 - 7.2.2.1 Optical Properties 319
 - 7.2.2.2 Electrical Properties 322
 - 7.2.2.3 Magnetic Properties 322
- 7.3 Syntheses of Nanoparticles 324
 - 7.3.1 Mechanical Attrition 326
 - 7.3.2 Formation of Nanoparticles from Vapors 326
 - 7.3.2.1 Gas Condensation Method 327
 - 7.3.2.2 Solvated Metal Atom Dispersion Method 328
 - 7.3.3 Formation of Nanoparticles from Solution 329
 - 7.3.3.1 Two-Phase Method 330
 - 7.3.3.2 Hot-Injection Method 332
 - 7.3.3.3 Syntheses in Confined Spaces 333
 - 7.3.4 Surface Modification of Nanoparticles 335
 - 7.3.5 Nanocomposites 337
- 7.4 One-Dimensional Nanostructures 340
 - 7.4.1 Nanowires and Nanorods 340
 - 7.4.2 Nanotubes 342
 - 7.4.2.1 Chemical Functionalization of Carbon Nanotubes 345
- 7.5 Nanometer-Scale Layers 347
 - 7.5.1 Graphene 348
 - 7.5.2 Self-Assembled Monolayers 349

Glossary 353
