

# SYNOPSIS OF CONTENTS

## Volume 1

- |  |                                |
|--|--------------------------------|
| 1. Crystal structure of the metallic elements      | <i>Steurer</i>                 |
| 2. Electron theory of metals                       | <i>Pettifor</i>                |
| 3. Structure and stability of alloys               | <i>Massalski</i>               |
| 4. Structure of intermetallic compounds and phases | <i>Ferro, Saccone</i>          |
| <i>Appendix: Quasicrystals</i>                     | <i>Steurer</i>                 |
| 5. Metallurgical thermodynamics                    | <i>Gaskell</i>                 |
| 6. Phase diagrams                                  | <i>Pelton</i>                  |
| 7. Diffusion in metals and alloys                  | <i>Bocquet, Limoge, Brebec</i> |
| 8. Solidification                                  | <i>Biloni, Boettinger</i>      |
| 9. Microstructure                                  | <i>Gleiter</i>                 |

## Volume 2

- |   |                                       |
|---|---------------------------------------|
| 10. Surface microscopy, qualitative and quantitative              | <i>Exner</i>                          |
| 11. Transmission electron microscopy                              | <i>Rühle, Wilkens</i>                 |
| 12. X-ray and neutron scattering                                  | <i>Kostorz</i>                        |
| 13. Interfacial and surface microchemistry                        | <i>Hondros, Seah, Hofmann, Lejček</i> |
| 14. Oxidation, hot corrosion and protection of metallic materials | <i>Saunders, Nicholls</i>             |
| 15. Diffusive phase transformations in the solid state            | <i>Doherty</i>                        |
| 16. Nondiffusive phase transformations                            | <i>Wayman, Bhadeshia</i>              |
| 17. Physical metallurgy of steels                                 | <i>Leslie, Hornbogen</i>              |
| 18. Point defects   | <i>Wollenberger</i>                   |
| 19. Metastable states of alloys                                   | <i>Cahn, Greer</i>                    |

## Volume 3

- |   |                                    |
|---|------------------------------------|
| 20. Dislocations  | <i>Hirth</i>                       |
| 21. Mechanical properties of single-phase crystalline media: deformation at low temperatures          | <i>Argon</i>                       |
| 22. Mechanical properties of single-phase crystalline media: deformation in the presence of diffusion | <i>Argon</i>                       |
| 23. Mechanical properties of solid solutions  | <i>Haasen†</i>                     |
| 24. Mechanical properties of intermetallic compounds  | <i>Pope</i>                        |
| 25. Mechanical properties of multiphase alloys  | <i>Strudel</i>                     |
| 26. Fracture  | <i>Thomson</i>                     |
| 27. Fatigue   | <i>Laird</i>                       |
| 28. Recovery and recrystallization  | <i>Cahn</i>                        |
| 29. Magnetic properties of metals and alloys  | <i>Livingston, Luborsky, Chin†</i> |
| 30. Metallic composite materials  | <i>Clyne</i>                       |
| 31. Sintering processes   | <i>Exner, Arzt</i>                 |
| 32. A metallurgist's guide to polymers  | <i>Windle</i>                      |
