How to Study This Textbook V

Preface XV

List of Symbols XVII

Acknowledgment XXIII

1	Preliminaries	1
1.1	Complex Numbers	1
1.2	Fourier Transformation	3
1.2.1	Basic Fourier Rules	7
1.3	Maxwell's Equations	11
1.4	Boundary Conditions	13
1.4.1	Method of Stationary Phase	15
	Questions	17
	Problems	17
	Further Reading	18
2	Light Propagation	19
2.1	Wave Equation	19
2.2	Solutions of the Wave Equation	21
2.2.1	Plane Waves	22
2.3	Vectorial Description of Plane Waves	24
2.3.1	Spherical Waves	26
2.3.2	Waves and Rays of Light	28
2.4	The Time-Independent Wave Equation	29
2.5	Paraxial Wave Equation	30
2.6	Gaussian Beams	31
2.7	The Angular Spectrum	34
2.8	Light Propagation in Terms of the Angular Spectrum	36
2.9	Evanescent Fields	37
2.10	Free-Space and Waveguide Propagation	41
2.10.1	Free-Space Optics	41
2.10.2	Waveguide Optics	42

	Questions	43
	Problems	44
	Further Reading	45
3	Light as Carrier of Information and Energy	47
3.1	Poynting Vector and Flow of Energy in a Wave Field	47
3.1.1	Single Plane Wave	47
3.1.2	Optical Intensity	49
3.1.3	Tilted Plane Wave	50
3.1.4	Two Interfering Plane Waves	51
3.1.5	Multimodal Wave Field	53
3.1.6	Poynting Vector of a Gaussian Beam Near the Focus	55
3.1.7	Power Flow through a Circular Aperture	56
3.2	Flow of Information in a Wave Field	57
3.2.1	Space-Bandwidth Product of a One-Dimensional Gaussian Function	59
3.2.2	Space-Bandwidth Product of a Two-Dimensional Gaussian Beam Profile	61
3.2.3	M^2 -Parameter of Laser Beams	62
3.A	Appendix: Minimal Value of the Space-Bandwidth Product	66
	Questions	67
	Problems	67
	Further Reading	68
4	Light Propagation in Free Space	69
4.1	Transmission of a Wave Field through an Object	70
4.1.1	Kirchhoff Approximation for Thin Objects	70
4.1.2	Thin and Thick Phase Objects	71
4.1.3	Transmission Properties of a Thin Lens	73
4.2	Propagation Between Objects	75
4.2.1	Huygens–Fresnel–Kirchhoff Diffraction Theory	76
4.2.2	Rayleigh–Sommerfeld–Debye Diffraction Theory	77
4.2.3	Paraxial Approximation of the Huygens–Fresnel Diffraction Integral	80
4.3	Diffraction at a Single Slit	81
4.4	Near-Field Diffraction	84
4.4.1	Near-Field Diffraction in Polar Coordinates	84
4.4.2	Axial Field Distribution and McCutchen’s Theorem	86
4.5	Examples for Near-Field Diffraction	87
4.5.1	Near-Field Diffraction at a Linear Grating (Talbot Effect)	87
4.5.2	Near-Field Diffraction at a Ring Aperture of Infinitesimal Width	89
4.5.3	Near-Field Diffraction at a Circular Aperture	89
4.6	Far-Field Diffraction and Optical Fourier Transformation	90
4.6.1	Far-Field Diffraction in Polar Coordinates	92
4.7	Examples of Far-Field Diffraction	93
4.7.1	Far-Field Diffraction at a Rectangular Aperture	93
4.7.2	Far-Field Diffraction at a Circular Aperture	94
4.7.3	Far-Field Diffraction at a Gaussian Aperture (Apodization)	95

4.7.4	Far-Field Diffraction at a Linear Grating	96
4.7.5	Grating Diffraction in k -space	98
4.8	Optical Imaging	100
4.8.1	$4f$ Setup	103
4.9	Lens Performance	104
4.9.1	Diffraction Limit and Resolution	104
4.9.2	Aberrations	106
4.9.3	Quality Criteria	108
4.9.4	Scaling Laws of Optical Systems	111
	Questions	112
	Problems	113
	Further Reading	114
5	Refractive and Reflective Microoptics	115
5.1	Refractive Optics	115
5.2	Refractive Microlenses	117
5.2.1	Generation of a Spherical Surface Profile by Using Surface Tension	117
5.2.2	Gradient-Index Microlenses	120
5.2.2.1	Planar GRIN Microlens	120
5.2.2.2	GRIN Rod Lens	123
5.3	Microprisms	127
5.3.1	Fabrication of Microprisms by Surface Micromachining	128
5.3.2	Fabrication of Microprisms by Bulk Micromachining	129
5.4	Reflective Microoptics	129
5.4.1	Retroreflector Array as Structured Mirror	131
5.4.2	Blazed Grating	134
	Questions	135
	Problems	135
	Further Reading	135
6	Diffraction Microoptics	137
6.1	Phase Quantization	137
6.1.1	Multilevel Diffractive Elements	141
6.2	Linear Diffraction Gratings	143
6.2.1	Linear Multilevel Grating	143
6.2.2	Beam Splitter Gratings	144
6.2.3	Bragg Gratings	147
6.3	Diffractive Elements with Radial Symmetry	149
6.3.1	Infinitesimal Ring Aperture	149
6.3.2	Ring Aperture of Finite Width	151
6.3.3	Axicon and Bessel beam	152
6.3.4	Spiral Axicon	156
6.3.5	Fresnel Zone Plate and Diffractive Lens	158
6.3.6	Photon Sieve	162
6.4	Subwavelength Gratings and Rigorous Diffraction Theory	164
6.4.1	Effective Medium Theory for Subwavelength Gratings	165

- 6.4.2 Rigorous Diffraction Theory 169
 - Questions 171
 - Problems 171
 - Further Reading 172
- 7 Micro- and Nanofabrication 173**
 - 7.1 Structuring and Pattern Transfer 173
 - 7.2 The Lithographic Process 174
 - 7.2.1 Photoresist 175
 - 7.3 Exposure 177
 - 7.3.1 Mask-Based Lithography 177
 - 7.3.2 Direct-Writing Lithography 179
 - 7.3.3 Nanolithography 182
 - 7.4 Pattern Transfer 184
 - 7.4.1 Etching 185
 - 7.4.2 Thin Film Deposition 188
 - 7.4.2.1 Physical Vapor Deposition 188
 - 7.4.2.2 Chemical Vapor Deposition 190
 - 7.5 MEMS Fabrication 192
 - 7.6 Nonlithographic Fabrication 196
 - 7.7 Examples for the Fabrication of Multilevel and Blazed Structures 198
 - 7.7.1 Fabrication of Binary and Multilevel Gratings 198
 - 7.7.2 Holographic Fabrication of a Blazed Grating 201
 - 7.7.3 Analog Lithography with Special Photomasks 202
 - Questions 204
 - Problems 204
 - Further Reading 205
- 8 Tunable Microoptics 207**
 - 8.1 Spatial Light Modulators 208
 - 8.1.1 Liquid Crystal-Based Spatial Light Modulators 208
 - 8.1.2 MEMS-Based Spatial Light Modulators 215
 - 8.2 Tunable Microlenses Using Microfluidics 217
 - 8.2.1 Electrowetting 217
 - 8.2.2 Membrane-Based Microlenses 220
 - Questions 222
 - Problems 222
 - Further Reading 223
- 9 Compound and Integrated Free-Space Optics 225**
 - 9.1 Microoptical Imaging 225
 - 9.1.1 Multi-Aperture Imaging 225
 - 9.1.2 Space-Bandwidth Product of a Multi-Aperture Imaging System 227
 - 9.1.3 Integral Imaging 229
 - 9.1.4 Gabor Superlens 230
 - 9.1.5 Microoptical Imaging for Interconnection 231

9.2	Microoptical Beam Homogenization, Beam Guiding and Steering	235
9.2.1	Homogenization of Laser Beams	235
9.2.2	Guiding of a High-Power Beam	238
9.2.3	Beam Steering with Microlenses	239
9.3	Integrated Free-Space Optics	241
9.4	MEMS-Based Integrated Free-Space Optics	241
9.4.1	Stacked Planar Optics	242
9.4.2	Planar Integrated Free-Space Optics	242
	Questions	246
	Problems	246
	Further Reading	246
10	Light Propagation in Waveguides	249
10.1	Overview About Waveguide Mechanisms	249
10.2	Dielectric Waveguides	251
10.2.1	Maxwell's Equation in 2D	252
10.2.2	Reflection and Transmission of Plane Waves at Interfaces	253
10.2.2.1	Critical Angle	255
10.3	Slab Waveguides	262
10.3.1	Zig-Zag Model	262
10.4	Determining Eigenmodes in Slab Waveguides from Maxwell's Equations	265
10.4.1	Symmetric Waveguide Structures	266
10.4.1.1	TE-Polarization	266
10.4.1.2	Field Distribution of the Eigenmodes and Goos-Haenchen Shift	273
10.4.1.3	TM-Polarization	273
10.4.2	Nonsymmetric Waveguides	275
10.4.2.1	Excitation of Waveguide Modes (Numerical Aperture)	278
10.5	Step-Index Fibers	281
	Questions	286
	Problems	286
	Further Reading	287
11	Integrated Waveguide Optics	289
11.1	Analysis of Waveguide Circuits	289
11.1.1	Concatenation of Waveguide Sections	292
11.2	Waveguide Couplers	295
11.2.1	Supermodes of Coupled Waveguides	296
11.2.1.1	Higher Order Supermodes	299
11.2.2	Coupled Mode Theory	301
11.2.3	Comparison Between Supermodes and Coupled Modes	304
11.3	Rectangular Waveguides	305
11.3.1	Strip Waveguides	306
11.3.2	Strip Loaded and Rib Waveguides	307
11.4	Arrayed Waveguide Gratings	312
11.4.1	Quantitative Description	313

- 11.4.1.1 Fields in the Output Waveguides 316
 - Questions 323
 - Problems 323
 - Further Reading 324
- 12 Plasmonics 325**
 - 12.1 Drude Model of Electrons in Metal 325
 - 12.2 Surface Waves at a Metal–Dielectric Interface 327
 - 12.2.1 Surfaces Plasmon Waves for the TE-Polarization? 333
 - 12.3 Finite Height of the Metal 334
 - 12.3.1 Nonsymmetric Plasmonic Waveguides 337
 - 12.3.1.1 Field Distribution 338
 - 12.3.2 Coupling into Plasmon Waves 340
 - 12.3.2.1 Excitation of Plasmon Waves by Gratings 344
 - 12.4 Three-Dimensional Plasmonic Waveguides 348
 - 12.5 Enhanced Transmission Through Tiny Holes 350
 - 12.6 Final Remarks 352
 - Questions 352
 - Problems 352
 - Further Reading 353
- 13 Photonic Crystals 355**
 - 13.1 Introduction 355
 - 13.1.1 Periodic Concatenation of $\lambda/4$ Long Sections 356
 - 13.2 Floquet–Bloch Modes 359
 - 13.2.1 Floquet–Bloch Modes in 1D Structures 364
 - 13.3 Two- and Three-Dimensional Periodic Structures 366
 - 13.3.1 Lattice Vectors and Reciprocal Lattice 367
 - 13.3.2 Photonic Crystals with Square Lattice 369
 - 13.3.2.1 Symmetry Considerations in a Square Lattice 370
 - 13.3.2.2 Band Structures for Photonic Crystals with Square Lattices 373
 - 13.3.2.3 Band Structures for Photonic Crystals with Square Lattice 373
 - 13.3.3 Photonic Crystals with Hexagonal Lattice 376
 - 13.4 Waveguides and Bends with Photonic Crystals 378
 - 13.5 Photonic Crystal Fibers 381
 - Questions 382
 - Problems 383
 - Further Reading 384
- 14 Left-Handed Materials 385**
 - 14.1 Introduction 385
 - 14.1.1 Features of Left-Handed Materials 386
 - 14.2 Mathematical Description of Plane Waves in Arbitrary Materials 388
 - 14.2.1 General Expressions for Plane Waves 390
 - 14.2.2 Plane Waves in Double Positive Materials 393
 - 14.2.3 Plane Waves in Double Negative Materials 394

14.2.4	Lossy Materials	395
14.3	Wave Propagation in Homogeneous Media	397
14.3.1	Determination of the Eigenvectors and Eigenvalues	399
14.3.1.1	Positive Material Parameters	400
14.3.1.2	Negative Material Parameters	401
14.3.1.3	Electric and Magnetic Field of Plane Waves	401
14.3.2	Connection of Media with Different Material Parameters	402
14.3.3	Snell's law	404
14.3.3.1	High Resolution Lenses	406
14.3.4	Poynting Vector	407
14.4	Practical Realization of Left-Handed Materials (Metamaterials)	407
14.4.1	Negative Permittivity – Nanowires	408
14.4.2	Negative Permeability – Split Ring Resonators	410
14.5	Left-Handed Materials in Time Domain	415
14.5.1	Final Remarks	419
	Questions	419
	Problems	420
	Further Reading	421
	Index	423
