Preface . . . . .	v
Dependence chart . . . . .	xii
Index of notation . . . . .	xiii
<b>1 Robert Brown's new thing . . . . .</b>	1
<b>2 Brownian motion as a Gaussian process . . . . .</b>	7
2.1 The finite dimensional distributions . . . . .	7
2.2 Invariance properties of Brownian motion . . . . .	12
2.3 Brownian Motion in $\mathbb{R}^d$ . . . . .	15
<b>3 Constructions of Brownian motion . . . . .</b>	21
3.1 The Lévy–Ciesielski construction . . . . .	21
3.2 Lévy's original argument . . . . .	28
3.3 Wiener's construction . . . . .	33
3.4 Donsker's construction . . . . .	36
3.5 The Bachelier–Kolmogorov point of view . . . . .	37
<b>4 The canonical model . . . . .</b>	40
4.1 Wiener measure . . . . .	40
4.2 Kolmogorov's construction . . . . .	44
<b>5 Brownian motion as a martingale . . . . .</b>	48
5.1 Some 'Brownian' martingales . . . . .	48
5.2 Stopping and sampling . . . . .	53
5.3 The exponential Wald identity . . . . .	57
<b>6 Brownian motion as a Markov process . . . . .</b>	62
6.1 The Markov property . . . . .	62
6.2 The strong Markov property . . . . .	65
6.3 Desiré André's reflection principle . . . . .	68
6.4 Transience and recurrence . . . . .	73
6.5 Lévy's triple law . . . . .	76
6.6 An arc-sine law . . . . .	79
6.7 Some measurability issues . . . . .	80

<b>7 Brownian motion and transition semigroups</b>	86
7.1 The semigroup	86
7.2 The generator	92
7.3 The resolvent	96
7.4 The Hille–Yosida theorem and positivity	100
7.5 Dynkin’s characteristic operator	103
<b>8 The PDE connection</b>	113
8.1 The heat equation	114
8.2 The inhomogeneous initial value problem	117
8.3 The Feynman–Kac formula	119
8.4 The Dirichlet problem	123
<b>9 The variation of Brownian paths</b>	137
9.1 The quadratic variation	138
9.2 Almost sure convergence of the variation sums	140
9.3 Almost sure divergence of the variation sums	143
9.4 Lévy’s characterization of Brownian motion	146
<b>10 Regularity of Brownian paths</b>	152
10.1 Hölder continuity	152
10.2 Non-differentiability	155
10.3 Lévy’s modulus of continuity	157
<b>11 The growth of Brownian paths</b>	164
11.1 Khintchine’s Law of the Iterated Logarithm	164
11.2 Chung’s ‘other’ Law of the Iterated Logarithm	168
<b>12 Strassen’s Functional Law of the Iterated Logarithm</b>	173
12.1 The Cameron–Martin formula	174
12.2 Large deviations (Schilder’s theorem)	181
12.3 The proof of Strassen’s theorem	186
<b>13 Skorokhod representation</b>	193
<b>14 Stochastic integrals: <math>L^2</math>-Theory</b>	203
14.1 Discrete stochastic integrals	203
14.2 Simple integrands	207
14.3 Extension of the stochastic integral to $\mathcal{L}_T^2$	211
14.4 Evaluating Itô integrals	215
14.5 What is the closure of $\mathcal{E}_T$ ?	219
14.6 The stochastic integral for martingales	222

<b>15 Stochastic integrals: beyond <math>\mathcal{L}_T^2</math></b>	227
<b>16 Itô's formula</b>	233
16.1 Itô processes and stochastic differentials	233
16.2 The heuristics behind Itô's formula	235
16.3 Proof of Itô's formula (Theorem 16.1)	236
16.4 Itô's formula for stochastic differentials	239
16.5 Itô's formula for Brownian motion in $\mathbb{R}^d$	242
16.6 Tanaka's formula and local time	243
<b>17 Applications of Itô's formula</b>	248
17.1 Doléans–Dade exponentials	248
17.2 Lévy's characterization of Brownian motion	253
17.3 Girsanov's theorem	255
17.4 Martingale representation – 1	258
17.5 Martingale representation – 2	261
17.6 Martingales as time-changed Brownian motion	263
17.7 Burkholder–Davis–Gundy inequalities	266
<b>18 Stochastic differential equations</b>	272
18.1 The heuristics of SDEs	273
18.2 Some examples	274
18.3 Existence and uniqueness of solutions	280
18.4 Solutions as Markov processes	285
18.5 Localization procedures	286
18.6 Dependence on the initial values	289
<b>19 On diffusions</b>	298
19.1 Kolmogorov's theory	300
19.2 Itô's theory	306
<b>20 Simulation of Brownian motion by Björn Böttcher</b>	312
20.1 Introduction	312
20.2 Normal distribution	317
20.3 Brownian motion	319
20.4 Multivariate Brownian motion	321
20.5 Stochastic differential equations	323
20.6 Monte Carlo method	328
<b>Appendix</b>	329
A.1 Kolmogorov's existence theorem	329
A.2 A property of conditional expectations	333

A.3	From discrete to continuous time martingales . . . . .	335
A.4	Stopping and sampling . . . . .	341
A.4.1	Stopping times . . . . .	341
A.4.2	Optional sampling . . . . .	344
A.5	Remarks on Feller processes . . . . .	348
A.6	The Doob–Meyer decomposition . . . . .	350
A.7	BV functions and Riemann–Stieltjes integrals . . . . .	356
A.7.1	Functions of bounded variation . . . . .	356
A.7.2	The Riemann–Stieltjes Integral . . . . .	357
A.8	Some tools from analysis . . . . .	360
A.8.1	Gronwall’s lemma . . . . .	360
A.8.2	Completeness of the Haar functions . . . . .	361
A.8.3	A multinomial identity . . . . .	362
Index	. . . . .	375
