

CONTENTS

Preface xv

SECTION I

Cells and Their Nourishment

CHAPTER 1 The Cell: A Microcosm of Life 1

Components of Typical Cells 2

Plasma Membrane 2

Cytoplasmic Matrix 4

Mitochondrion 6

Nucleus 8

Control of Gene Expression 10

Endoplasmic Reticulum and Golgi Apparatus 11

Lysosomes and Peroxisomes 12

Cellular Proteins 13

Receptors and Intracellular Signaling 13

Transport Proteins 15

Catalytic Proteins (Enzymes) 15

Clinical Applications of Cellular

Enzymes 18

Apoptosis 19

Programmed Death 19

Potential Mechanisms 19

Biological Energy 20

Energy Release and Consumption in Chemical
Reactions 21

Expressions of Energy 21

The Role of High-Energy Phosphate in Energy
Storage 24

Coupled Reactions in the Transfer of Energy 25

Reduction Potentials 26

Summary 27

PERSPECTIVE Nutritional Genomics:

A New Perspective on Food, by Ruth DeBusk, Ph.D., R.D. 29

CHAPTER 2 The Digestive System: Mechanism for Nourishing the Body 33

The Structures of the Digestive Tract and the Digestive
and Absorptive Processes 33

The Oral Cavity 35

The Esophagus 37

The Stomach 38

The Small Intestine 43

Immune System Protection of the

Gastrointestinal Tract 46

The Accessory Organs 47

The Digestive and Absorptive Processes 51

The Colon (Large Intestine) 53

Coordination and Regulation of the Digestive
Process 56

Neural Regulation 56

Regulatory Peptides 56

Summary 58

**PERSPECTIVE An Overview of Selected Digestive System Disorders
with Implications for Nourishing the Body 60**

SECTION II

Macronutrients and Their Metabolism

CHAPTER 3 Carbohydrates 63

Overview of Structural Features 63

Simple Carbohydrates 64

Monosaccharides 64

Complex Carbohydrates 68

Oligosaccharides 68

Polysaccharides 68

Digestion 69

Digestion of Polysaccharides 70

Digestion of Disaccharides 70

Absorption, Transport, and Distribution 70

Absorption of Glucose and Galactose 70

Absorption of Fructose 73

Facilitative Transport 73

Insulin 76

Glucose Entry into Interstitial Fluid 77

Maintenance of Blood Glucose Levels 77

Glycemic Response to Carbohydrates 77

Glycemic Index and Glycemic Load 77

Integrated Metabolism in Tissues 78

Glycogenesis 79

Glycogenolysis 81

Glycolysis 83

The Tricarboxylic Acid Cycle 86

Formation of ATP 90

The Pentose Phosphate Pathway (Hexosemonophosphate
Shunt) 97

Gluconeogenesis 97

Regulation of Metabolism	100
Allosteric Enzyme Modulation	101
Covalent Regulation	102
Genetic Regulation	102
Directional Shifts in Reversible Reactions	102
Metabolic Control of Glycolysis and Gluconeogenesis	102
Summary	104
PERSPECTIVE High-Fructose Corn Syrup: Just Another Sweetener?	107

CHAPTER 4 Fiber 111

Definitions of Dietary Fiber and Functional Fiber	111
Fiber and Plants	112
Chemistry and Characteristics of Dietary and Functional Fibers	112
Cellulose	112
Hemicellulose	114
Pectins	114
Lignin	114
Gums	114
β -glucans	115
Fructans: Inulin, Oligofructose, and Fructooligosaccharides	115
Resistant Starch	115
Chitin and Chitosan	116
Polydextrose and Polyols	116
Psyllium	116
Resistant Dextrins	116
Selected Properties and Physiological and Metabolic Effects of Fiber	117
Solubility in Water	117
Water-Holding/Hydration Capacity and Viscosity	117
Adsorption or Binding Ability	119
Degradability/Fermentability	121
Roles of Fiber in Disease Prevention and Management	124
Cardiovascular Disease	124
Diabetes Mellitus	124
Obesity and Weight Control	124
Gastrointestinal Disorders	124
Health Claims and Food Labels	125
Recommended Fiber Intake	126
Summary	127
PERSPECTIVE Phytochemicals and Herbal Supplements in Health and Disease	129
PERSPECTIVE Are Prebiotics Beneficial to Health?	134

CHAPTER 5 Lipids 137

Structure and Biological Importance	138
Fatty Acids	138
Triacylglycerols (Triglycerides)	141
Sterols and Steroids	141

Phospholipids	143
Glycolipids	146
Digestion	146
Triacylglycerol Digestion	146
Cholesterol and Phospholipid Digestion	147
Absorption	148
Fatty Acid and Mono- and Diacylglycerol Absorption	148
Cholesterol Absorption	150
Chylomicron Formation	151
Transport and Storage	151
Lipoprotein Complexes	151
Role of the Liver and Adipose Tissue in Lipid Metabolism	154
Metabolism of Lipoproteins	156
Lipids, Lipoproteins, and Cardiovascular Disease Risk	160
Cholesterol	160
Saturated and Unsaturated Fatty Acids	161
Trans Fatty Acids	162
Lipoprotein(a)	163
Apolipoprotein E	163
Integrated Metabolism in Tissues	164
Catabolism of Triacylglycerols and Fatty Acids	164
Energy Considerations in Fatty Acid Oxidation	165
Formation of Ketone Bodies	166
Catabolism of Cholesterol	167
Synthesis of Fatty Acids	167
Synthesis of Triacylglycerols	172
Synthesis of Cholesterol	172
Regulation of Lipid Metabolism	173
Brown Fat Thermogenesis	174
Ethyl Alcohol: Metabolism and Biochemical Impact	175
The Alcohol Dehydrogenase (ADH) Pathway	175
The Microsomal Ethanol Oxidizing System (MEOS)	176
Alcoholism: Biochemical and Metabolic Alterations	177
Alcohol in Moderation: The Brighter Side	178
Summary	178
PERSPECTIVE The Role of Lipoproteins and Immunity in Atherogenesis	181

CHAPTER 6 Protein 183

Amino Acid Classification	183
Structure	183
Net Electrical Charge	185
Polarity	185
Essentiality	186
Sources of Amino Acids	186
Digestion	187
Stomach	187
Small Intestine	188
Absorption	189
Intestinal Brush Border Membrane Absorption	189
Intestinal Basolateral Membrane Transport	191
Amino Acid Absorption into Extraintestinal Tissues	192

Amino Acid Metabolism	192
Amino Acid Catabolism Overview	192
Hepatic Catabolism and Uses of Aromatic Amino Acids	197
Hepatic Catabolism and Uses of Sulfur (S)-Containing Amino Acids	201
Hepatic Catabolism and Uses of Branched-Chain Amino Acids	203
Hepatic Catabolism and Uses of Basic Amino Acids	204
Hepatic Catabolism and Uses of Other Selected Amino Acids	206
Protein Synthesis	207
Protein Structure and Organization	209
Functional Roles of Proteins and Nitrogen-Containing Nonprotein Compounds	210
Catalysts	210
Messengers	212
Structural Elements	212
Buffers	213
Fluid Balancers	213
Immunoprotectors	213
Transporters	214
Acute Phase Responders	214
Other Roles	215
Nitrogen-Containing Nonprotein Compounds	215
Interorgan "Flow" of Amino Acids and Organ-Specific Metabolism	224
Intestinal Cell Amino Acid Metabolism	225
Amino Acids in the Plasma	226
Glutamine and the Muscle, Intestine, Liver, and Kidneys	226
Alanine and the Liver and Muscle	228
Skeletal Muscle	228
Kidneys	231
Brain and Accessory Tissues	233
Catabolism of Tissue Proteins	236
Lysosomal Degradation	236
Proteasomal Degradation	236
Changes in Body Mass with Age	237
Protein Quality and Protein and Amino Acid Needs	238
Evaluation of Protein Quality	239
Protein Information on Food Labels	241
Assessing Protein and Amino Acid Needs	241
Recommended Protein and Amino Acid Intakes	242
Protein Deficiency/Malnutrition	244
Summary	244
PERSPECTIVE The Impact of Starvation, Metabolic Stress, and Low-Grade Inflammation on Body Proteins and Protein Metabolism	246

CHAPTER 7 Integration and Regulation of Metabolism and the Impact of Exercise and Sport 249

Interrelationship of Carbohydrate, Lipid, and Protein Metabolism	249
Macronutrient Intermediates Interconversions	250
Energy Homeostasis	252
AMP-Activated Protein Kinase	252
The Central Role of the Liver in Metabolism	253
Tissue-Specific Metabolism during the Fed-Fast Cycle	255
Carbohydrate and Lipid Metabolism	255
Amino Acid Metabolism	259
System Integration and Homeostasis	261
Endocrine Function in Fed State	262
Endocrine Function in Postabsorptive or Fasting State	265
Sports Nutrition	267
Biochemical Assessment of Physical Exertion	267
Energy Sources during Exercise	268
Carbohydrate Supplementation (Supercompensation)	271
Summary	272
PERSPECTIVE Metabolic Syndrome	274

CHAPTER 8 Body Composition, Energy Expenditure, and Energy Balance 275

Body Weight: What Should We Weigh?	275
Body Mass Index	275
Formulas	277
The Composition of the Human Body	279
Methods for Measuring Body Composition	279
Anthropometry	280
Densitometry/Hydrodensitometry	281
Air-Displacement Plethysmography	282
Absorptiometry	282
Computerized (Axial) Tomography (CAT or CT)	283
Magnetic Resonance Imaging (MRI)	283
Bioelectrical Impedance Analysis (BIA)	284
Ultrasonography or Ultrasound	284
Infrared Interactance	284
Atomic Methods	285
Summary of Methods	286
Energy Balance	286
Prevalence of Obesity	286
Components of Energy Expenditure	288
Basal Metabolic Rate and Resting Energy Expenditure	288
Thermic Effect of Food	289
Energy Expenditure of Physical Activity	289
Thermoregulation	289

Assessing Energy Expenditure	290
Direct Calorimetry	290
Indirect Calorimetry	290
Doubly Labeled Water	292
Derived Formulas	293
Regulation of Body Weight and Composition	294
Genetic Influences	294
Hormonal Influences	295
Positive Energy Balance	296
Negative Energy Balance	297
Summary	298
PERSPECTIVE Eating Disorders	301

SECTION III

The Regulatory Nutrients

CHAPTER 9 Water-Soluble Vitamins 307

Vitamin C (Ascorbic Acid)	310
Sources	311
Digestion, Absorption, Transport, and Storage	311
Functions and Mechanisms of Action	312
Interactions with Other Nutrients	316
Metabolism and Excretion	316
Recommended Dietary Allowance	317
Deficiency: Scurvy	317
Toxicity	318
Assessment of Nutriture	318
Thiamin (Vitamin B₁)	319
Sources	319
Digestion, Absorption, Transport, and Storage	319
Functions and Mechanisms of Action	320
Metabolism and Excretion	323
Recommended Dietary Allowance	323
Deficiency: Beriberi	324
Toxicity	324
Assessment of Nutriture	324
Riboflavin (Vitamin B₂)	325
Sources	325
Digestion, Absorption, Transport, and Storage	325
Functions and Mechanisms of Action	327
Metabolism and Excretion	328
Recommended Dietary Allowance	329
Deficiency: Ariboflavinosis	329
Toxicity	329
Assessment of Nutriture	329
Niacin (Vitamin B₃)	330
Sources	330
Digestion, Absorption, Transport, and Storage	331
Functions and Mechanisms of Action	332
Metabolism and Excretion	333

Recommended Dietary Allowance	333
Deficiency: Pellagra	333
Toxicity	333
Assessment of Nutriture	334
Pantothenic Acid	334
Sources	334
Digestion, Absorption, Transport, and Storage	335
Functions and Mechanisms of Action	336
Metabolism and Excretion	337
Adequate Intake	338
Deficiency: Burning Feet Syndrome	338
Toxicity	338
Assessment of Nutriture	338
Biotin	338
Sources	338
Digestion, Absorption, Transport, and Storage	339
Functions and Mechanisms of Action	339
Metabolism and Excretion	342
Adequate Intake	342
Deficiency	343
Toxicity	343
Assessment of Nutriture	343
Folate	344
Sources	344
Digestion, Absorption, Transport, and Storage	345
Functions and Mechanisms of Action	347
Interactions with Other Nutrients	350
Metabolism and Excretion	351
Recommended Dietary Allowance	351
Deficiency: Megaloblastic Macrocytic Anemia	351
Toxicity	353
Assessment of Nutriture	353
Vitamin B₁₂ (Cobalamin)	354
Sources	354
Digestion, Absorption, Transport, and Storage	355
Functions and Mechanisms of Action	356
Metabolism and Excretion	358
Recommended Dietary Allowance	358
Deficiency: Megaloblastic Macrocytic Anemia	358
Toxicity	359
Assessment of Nutriture	359
Vitamin B₆	360
Sources	360
Digestion, Absorption, Transport, and Storage	361
Functions and Mechanisms of Action	361
Metabolism and Excretion	364
Recommended Dietary Allowance	364
Deficiency	364
Toxicity	365
Assessment of Nutriture	365
PERSPECTIVE Genetics and Nutrition: The Effect on Folic Acid Needs and Risk to Chronic Disease, by Dr. Rita M. Johnson	366

CHAPTER 10 Fat-Soluble Vitamins 371

Vitamin A and Carotenoids 371

- Sources 372
- Digestion and Absorption 373
- Transport, Metabolism, and Storage 376
- Functions and Mechanisms of Action 380
- Interactions with Other Nutrients 386
- Metabolism and Excretion 387
- Recommended Dietary Allowance 387
- Deficiency 388
- Toxicity: Hypervitaminosis A 388
- Assessment of Nutriture 389

Vitamin D 390

- Sources 391
- Absorption 392
- Transport, Metabolism, and Storage 392
- Functions and Mechanisms of Action 394
- Interactions with Other Nutrients 398
- Metabolism and Excretion 398
- Recommended Dietary Allowance 398
- Deficiency: Rickets and Osteomalacia 399
- Toxicity 399
- Assessment of Nutriture 400

Vitamin E 400

- Sources 401
- Digestion and Absorption 402
- Transport, Metabolism, and Storage 402
- Functions and Mechanisms of Action 403
- Interactions with Other Nutrients 406
- Metabolism and Excretion 406
- Recommended Dietary Allowance 406
- Deficiency 407
- Toxicity 407
- Assessment of Nutriture 407

Vitamin K 409

- Sources 409
- Absorption 410
- Transport, Metabolism, and Storage 410
- Functions and Mechanisms of Action 410
- Interactions with Other Nutrients 413
- Metabolism and Excretion 413
- Adequate Intake 413
- Deficiency 414
- Toxicity 414
- Assessment of Nutriture 414

PERSPECTIVE The Antioxidant Nutrients, Reactive Species, and Disease 416

CHAPTER 11 Major Minerals 425

Calcium 425

- Sources 427
- Digestion, Absorption, and Transport 427
- Functions and Mechanisms of Action 431

Interactions with Other Nutrients 434

Excretion 434

Recommended Dietary Allowance 435

Deficiency 436

Toxicity 436

Assessment of Nutriture 437

Phosphorus 438

Sources 438

Digestion, Absorption, and Transport 438

Functions and Mechanisms of Action 440

Excretion 442

Recommended Dietary Allowance 443

Deficiency 443

Toxicity 443

Assessment of Nutriture 443

Magnesium 443

Sources 443

Digestion, Absorption, and Transport 444

Functions and Mechanisms of Action 445

Interactions with Other Nutrients 446

Excretion 447

Recommended Dietary Allowance 447

Deficiency 447

Toxicity 448

Assessment of Nutriture 448

PERSPECTIVE Osteoporosis and Diet 450

CHAPTER 12 Water and Electrolytes 455

Water Distribution in the Body 455

Maintenance of Fluid Balance 456

Osmotic Pressure 456

Filtration Forces 457

The Kidney's Role 457

Vasopressin 458

Renin-Angiotensin-Aldosterone System 459

Maintenance of Electrolyte Balance 461

Sodium 462

Sources 462

Absorption, Transport, and Function 463

Interactions with Other Nutrients 464

Excretion 465

Deficiency 465

Adequate Intake and Assessment of Nutriture 465

Potassium 466

Sources 466

Absorption, Transport, and Function 466

Interactions with Other Nutrients 466

Excretion 466

Deficiency and Toxicity 467

Adequate Intake and Assessment of Nutriture 467

Chloride 467

Sources 467

Absorption, Transport, and Secretion 468

Functions 468
Excretion 469
Deficiency 469
Adequate Intake and Assessment of Nutriture 469
Acid-Base Balance: The Control of Hydrogen Ion Concentration 469
Acid-Base Buffers 470
Respiratory Regulation of pH 471
Renal Regulation of pH 471
Summary 473
PERSPECTIVE Macrominerals and Hypertension 475
PERSPECTIVE Fluid Balance and the Thermal Stress of Exercise 479

CHAPTER 13 Essential Trace and Ultratrace Minerals 481

Iron 481
Sources 482
Digestion, Absorption, Transport, and Storage 484
Functions and Mechanisms of Action 491
Turnover 495
Interactions with Other Nutrients 496
Excretion 496
Recommended Dietary Allowance 497
Deficiency 497
Toxicity 497
Assessment of Nutriture 498
Zinc 500
Sources 500
Digestion, Absorption, Transport, and Storage 501
Functions and Mechanisms of Action 505
Interactions with Other Nutrients 508
Excretion 508
Recommended Dietary Allowance 509
Deficiency 509
Toxicity 509
Assessment of Nutriture 509
Copper 510
Sources 510
Digestion, Absorption, Transport, and Storage 511
Functions and Mechanisms of Action 514
Interactions with Other Nutrients 516
Excretion 517
Recommended Dietary Allowance 517
Deficiency 518
Toxicity 518
Assessment of Nutriture 518
Selenium 519
Sources 519
Digestion, Absorption, Transport, and Storage 520

Functions and Mechanisms of Action 522
Interactions with Other Nutrients 525
Excretion 525
Recommended Dietary Allowance 525
Deficiency 525
Toxicity 526
Assessment of Nutriture 526
Chromium 527
Sources 527
Digestion, Absorption, Transport, and Storage 527
Functions and Mechanisms of Action 528
Interactions with Other Nutrients 529
Excretion 529
Adequate Intake 529
Deficiency 529
Toxicity 529
Assessment of Nutriture 530
Iodine 530
Sources 530
Digestion, Absorption, Transport, and Storage 531
Functions and Mechanisms of Action 531
Interactions with Other Nutrients 533
Excretion 534
Recommended Dietary Allowance 534
Deficiency 534
Toxicity 535
Assessment of Nutriture 535
Manganese 536
Sources 536
Digestion, Absorption, Transport, and Storage 536
Functions and Mechanisms of Action 536
Interactions with Other Nutrients 538
Excretion 538
Adequate Intake 538
Deficiency 538
Toxicity 538
Assessment of Nutriture 538
Molybdenum 539
Sources 539
Digestion, Absorption, Transport, and Storage 539
Functions and Mechanisms of Action 539
Interactions with Other Nutrients 541
Excretion 542
Recommended Dietary Allowance 542
Deficiency 542
Toxicity 542
Assessment of Nutriture 542
PERSPECTIVE Nutrient–Drug Interactions 544

CHAPTER 14 Nonessential Trace and Ultratrace Minerals 547

Fluoride 547

Sources 547

Absorption, Transport, Storage,
and Excretion 549

Functions and Deficiency 549

Recommended Intake, Toxicity, and Assessment
of Nutriture 550

Arsenic 550

Sources 550

Absorption, Transport, Storage,
and Excretion 551

Functions and Deficiency 552

Interactions with Other Nutrients 552

Recommended Intake, Toxicity, and Assessment
of Nutriture 552

Boron 553

Sources 553

Absorption, Transport, Storage,
and Excretion 553

Functions and Deficiency 553

Recommended Intake, Toxicity, and Assessment
of Nutriture 554

Nickel 554

Sources 554

Absorption, Transport, Storage,
and Excretion 554

Functions and Deficiency 555

Interactions with Other Nutrients 555

Recommended Intake, Toxicity, and Assessment
of Nutriture 555

Silicon 555

Sources 556

Absorption, Transport, Storage,
and Excretion 556

Functions and Deficiency 556

Recommended Intake, Toxicity, and Assessment
of Nutriture 556

Vanadium 557

Sources 557

Absorption, Transport, Storage,
and Excretion 557

Functions and Deficiency 558

Recommended Intake, Toxicity, and Assessment
of Nutriture 559

Cobalt 559

**PERSPECTIVE No, Silver Is Not Another Essential Ultratrace Mineral:
Tips to Identifying Bogus Claims about Dietary Supplements 560**

Glossary 563

Index 569
