

Table of Contents

Preface	VII
Part I	1
1 What Is Econometrics?	3
1.1 Introduction	3
1.2 A Brief History	5
1.3 Critiques of Econometrics	7
1.4 Looking Ahead	8
Notes	10
References	10
2 Basic Statistical Concepts	13
2.1 Introduction	13
2.2 Methods of Estimation	13
2.3 Properties of Estimators	16
2.4 Hypothesis Testing	21
2.5 Confidence Intervals	30
2.6 Descriptive Statistics	31
Notes	36
Problems	36
References	42
Appendix	42
3 Simple Linear Regression	49
3.1 Introduction	49
3.2 Least Squares Estimation and the Classical Assumptions	50
3.3 Statistical Properties of Least Squares	55
3.4 Estimation of σ^2	56
3.5 Maximum Likelihood Estimation	57
3.6 A Measure of Fit	58
3.7 Prediction	60
3.8 Residual Analysis	60
3.9 Numerical Example	63
3.10 Empirical Example	64
Problems	67
References	71
Appendix	72
4 Multiple Regression Analysis	73
4.1 Introduction	73

4.2	Least Squares Estimation	73
4.3	Residual Interpretation of Multiple Regression Estimates	75
4.4	Overspecification and Underspecification of the Regression Equation	76
4.5	R-Squared Versus R-Bar-Squared	78
4.6	Testing Linear Restrictions	78
4.7	Dummy Variables	81
	Note	85
	Problems	85
	References	91
	Appendix	92
5	Violations of the Classical Assumptions	95
5.1	Introduction	95
5.2	The Zero Mean Assumption	95
5.3	Stochastic Explanatory Variables	96
5.4	Normality of the Disturbances	98
5.5	Heteroskedasticity	98
5.6	Autocorrelation	110
	Notes	120
	Problems	120
	References	126
6	Distributed Lags and Dynamic Models	131
6.1	Introduction	131
6.2	Infinite Distributed Lag	137
	6.2.1 Adaptive Expectations Model (AEM)	138
	6.2.2 Partial Adjustment Model (PAM)	138
6.3	Estimation and Testing of Dynamic Models with Serial Correlation	139
	6.3.1 A Lagged Dependent Variable Model with AR(1) Disturbances	140
	6.3.2 A Lagged Dependent Variable Model with MA(1) Disturbances	142
6.4	Autoregressive Distributed Lag	143
	Note	144
	Problems	144
	References	146
Part II		149
7	The General Linear Model: The Basics	151
7.1	Introduction	151
7.2	Least Squares Estimation	151
7.3	Partitioned Regression and the Frisch-Waugh-Lovell Theorem	154
7.4	Maximum Likelihood Estimation	156
7.5	Prediction	159
7.6	Confidence Intervals and Test of Hypotheses	160
7.7	Joint Confidence Intervals and Test of Hypotheses	160

7.8	Restricted MLE and Restricted Least Squares	161
7.9	Likelihood Ratio, Wald and Lagrange Multiplier Tests	162
	Notes	167
	Problems	167
	References	172
	Appendix	173
8	Regression Diagnostics and Specification Tests	179
8.1	Influential Observations	179
8.2	Recursive Residuals	187
8.3	Specification Tests	196
8.4	Nonlinear Least Squares and the Gauss-Newton Regression	206
8.5	Testing Linear Versus Log-Linear Functional Form	213
	Notes	215
	Problems	215
	References	219
9	Generalized Least Squares	223
9.1	Introduction	223
9.2	Generalized Least Squares	223
9.3	Special Forms of Ω	225
9.4	Maximum Likelihood Estimation	226
9.5	Test of Hypotheses	226
9.6	Prediction	227
9.7	Unknown Ω	227
9.8	The W, LR and LM Statistics Revisited	228
9.9	Spatial Error Correlation	230
	Note	231
	Problems	232
	References	237
10	Seemingly Unrelated Regressions	241
10.1	Introduction	241
10.2	Feasible GLS Estimation	243
10.3	Testing Diagonality of the Variance-Covariance Matrix	246
10.4	Seemingly Unrelated Regressions with Unequal Observations	246
10.5	Empirical Examples	248
	Problems	251
	References	254
11	Simultaneous Equations Model	257
11.1	Introduction	257
	11.1.1 Simultaneous Bias	257
	11.1.2 The Identification Problem	260
11.2	Single Equation Estimation: Two-Stage Least Squares	263
	11.2.1 Spatial Lag Dependence	271

11.3	System Estimation: Three-Stage Least Squares	272
11.4	Test for Over-Identification Restrictions	273
11.5	Hausman's Specification Test	275
11.6	Empirical Examples	278
	Notes	285
	Problems	286
	References	296
	Appendix	298
12	Pooling Time-Series of Cross-Section Data	305
12.1	Introduction	305
12.2	The Error Components Model	305
12.2.1	The Fixed Effects Model	306
12.2.2	The Random Effects Model	308
12.2.3	Maximum Likelihood Estimation	312
12.3	Prediction	313
12.4	Empirical Example	313
12.5	Testing in a Pooled Model	317
12.6	Dynamic Panel Data Models	321
12.6.1	Empirical Illustration	324
12.7	Program Evaluation and Difference-in-Differences Estimator	326
12.7.1	The Difference-in-Differences Estimator	327
	Problems	327
	References	330
13	Limited Dependent Variables	333
13.1	Introduction	333
13.2	The Linear Probability Model	333
13.3	Functional Form: Logit and Probit	334
13.4	Grouped Data	336
13.5	Individual Data: Probit and Logit	341
13.6	The Binary Response Model Regression	342
13.7	Asymptotic Variances for Predictions and Marginal Effects	344
13.8	Goodness of Fit Measures	344
13.9	Empirical Examples	345
13.10	Multinomial Choice Models	350
13.10.1	Ordered Response Models	350
13.10.2	Unordered Response Models	354
13.11	The Censored Regression Model	356
13.12	The Truncated Regression Model	359
13.13	Sample Selectivity	360
	Notes	362
	Problems	362
	References	368
	Appendix	370

14 Time-Series Analysis	373
14.1 Introduction	373
14.2 Stationarity	373
14.3 The Box and Jenkins Method	375
14.4 Vector Autoregression	378
14.5 Unit Roots	379
14.6 Trend Stationary Versus Difference Stationary	383
14.7 Cointegration	384
14.8 Autoregressive Conditional Heteroskedasticity	387
Note	390
Problems	390
References	394
Appendix	397
List of Figures	403
List of Tables	405
Index	407
