CONTENTS

Series Editor's Introduction vii

Acknowledgments ix

1. Introduction 1

2. Quantiles and Quantile Functions 7

CDFs, Quantiles, and Quantile Functions 7
Sampling Distribution of a Sample Quantile 11
Quantile-Based Measures of Location and Shape 12
Quantile as a Solution to a Certain Minimization Problem 14
Properties of Quantiles 19
Summary 20
Note 20
Chapter 2 Appendix: A Proof: Median and Quantiles as Solutions to a Minimization Problem 21

3. Quantile-Regression Model and Estimation 22

Linear-Regression Modeling and Its Shortcomings 22
Conditional-Median and Quantile-Regression Models 29
QR Estimation 33
Transformation and Equivariance 38
Summary 42
Notes 42

4. Quantile-Regression Inference 43

Standard Errors and Confidence Intervals for the LRM 43
Standard Errors and Confidence Intervals for the QRM 44
The Bootstrap Method for the QRM 47
Goodness of Fit of the QRM 51
Summary 54
Note 55

5. Interpretation of Quantile-Regression Estimates **55**

Reference and Comparison 56
Conditional Means Versus Conditional Medians 56
Interpretation of Other Individual Conditional Quantiles 59
Tests for Equivalence of Coefficients Across Quantiles 60
Using the QRM Results to Interpret Shape Shifts 63
Summary 76
Notes 76

6. Interpretation of Monotone-Transformed QRM **77**

Location Shifts on the Log Scale 78
From Log Scale Back to Raw Scale 78
Graphical View of Log-Scale Coefficients 86
Shape-Shift Measures From Log-Scale Fits 88
Summary 91
Notes 91

7. Application to Income Inequality in 1991 and 2001 **92**

Observed Income Disparity 92
Descriptive Statistics 96
Notes on Survey Income Data 97
Goodness of Fit 97
Conditional-Mean Versus Conditional-Median Regression 98
Graphical View of QRM Estimates From Income and Log-Income Equations 100
Quantile Regressions at Noncentral Positions: Effects in Absolute Terms 105
Assessing a Covariate's Effect on Location and Shape Shifts 107
Summary 112

Appendix: Stata Codes **113**

References **121**

Index **123**

About the Authors **126**
