INTRODUCTION	3	3	
		
1.1 Formation of Earth's chemical elements in supernovae	4	HOW ARE MINERALS IDENTIFIED?	39
1.2 Birth of the solar system and Earth	5	3.1 Habit	40
1.3 Accretion and early history of the Earth	7	3.2 State of aggregation	41
1.4 Internal structure of the Earth	7	3.3 Color and luster	42
1.5 Cooling of the planet and plate tectonics	8	3.3.1 Reasons for color	45
1.6 Plate tectonics and the formation of rocks	9	3.4 Cleavage	49
1.6.1 Divergent plate boundaries	10	3.5 Hardness	51
1.6.2 Convergent plate boundaries	10	3.6 Specific gravity (relative density)	52
1.6.3 Transform boundaries	10	3.6.1 Specific gravity and atomic structure	52
1.6.4 Mantle plumes and hot spots	10	3.7 Magnetism, solubility in acid, and radioactivity	53
1.7 Outline of subsequent chapters	11	3.8 Instrumental methods for the quantitative characterization of minerals	53
Summary	12	3.8.1 X-ray powder diffraction	54
Review questions	13	3.8.2 Electron beam techniques: scanning electron microscopy, electron microprobe analysis, and transmission electron microscopy	57
Online resources	13	Summary	60
Further reading	13	Review questions	61
		Further reading	61

MATERIALS OF THE SOLID EARTH	15	FUNDAMENTALS OF CRYSTAL STRUCTURES	63
2.1 Definition of a mineral	16	4.1 Naturally occurring chemical elements	64
2.1.1 Examples of some familiar minerals	17	4.2 Atomic and ionic radii	64
2.2 How are minerals classified?	21	4.3 What factors control the packing of ions (and atoms) in mineral structures?	66
2.3 How are minerals named?	21	4.4 Pauling's rules	70
2.4 What is a crystal, and what is the crystalline state?	22	4.5 What forces hold crystal structures together?	75
2.5 What is a rock?	24	4.5.1 Electronic configuration of atoms and ions	75
2.6 How do rocks form? Classification into igneous, sedimentary, and metamorphic	24	4.5.2 Chemical bonding	76
2.7 Examples of some familiar rocks	27	4.6 Atomic substitutions	80
2.8 Plate tectonics and the generation of rocks	31	4.6.1 Factors responsible for the extent of atomic substitution (solid solution)	80
2.8.1 Midocean-ridge rock factory	31	4.6.2 Types of solid solution	83
2.8.2 Convergent-plate-boundary rock factory	33		
2.8.3 Continental divergent-plate-boundary rock factory (rift valley)	33		
2.8.4 Mantle plume hot-spot rock factory	34		
2.8.5 Passive-margin rock factories	34		
2.8.6 Epeiric-sea rock factories	34		
2.8.7 Metamorphic rock factories	34		

Summary	84	Summary	153
Review questions	85	Review questions	155

		Further reading	155

5

INTRODUCTION TO CRYSTALLOGRAPHY	87
5.1 Symmetry elements and operations	89
5.2 Combinations of symmetry elements	90
5.3 The six crystal systems	91
5.3.1 Crystallographic axes	91
5.3.2 Hermann-Mauguin symmetry notation	93
5.3.3 Crystallographic notation for planes in crystals	93
5.3.4 Definition of crystal form	95
5.3.5 Crystallographic notation for directions in crystals	98
5.4 Crystal projections	99
5.5 Seven of the thirty-two point groups	103
5.6 Twins	113
5.7 Some aspects of space groups	116
5.7.1 Space groups	121
5.8 Polymorphism	126
Summary	131
Review questions	132
Further reading	133

6

MINERALS AND ROCKS OBSERVED UNDER THE POLARIZING OPTICAL MICROSCOPE	135
6.1 Light and the polarizing microscope	136
6.2 Passage of light through a crystal: refractive index and angle of refraction	137
6.3 Passage of polarized light through minerals	139
6.4 Accessory plates and determination of fast and slow vibration directions	143
6.5 Extinction positions and the sign of elongation	144
6.6 Anomalous interference colors, pleochroism, and absorption	144
6.7 Mineral identification chart	145
6.8 Uniaxial optical indicatrix	146
6.9 Biaxial optical indicatrix	148
6.10 Uniaxial interference figures	148
6.11 Determination of optic sign from uniaxial optic axis figure	150
6.12 Biaxial interference figures, optic sign, and optic angle (2V)	150
6.13 Modal analysis	152

7

IGNEOUS ROCK-FORMING MINERALS	157
7.1 Common chemical elements in the Earth's crust and in mineral and rock analyses	158
7.2 Calculation of mineral formulas	159
7.3 Triangular diagrams	161
7.4 Systematic mineralogical descriptions of common igneous minerals	162
7.5 Plagioclase feldspar	164
7.6 K-feldspar	166
7.7 Quartz and polymorphs	167
7.8 Nepheline	168
7.9 Leucite	169
7.10 Sodalite	169
7.11 Enstatite	170
7.12 Pigeonite	171
7.13 Augite	172
7.14 Aegirine	174
7.15 Hornblende	174
7.16 Muscovite	175
7.17 Phlogopite	177
7.18 Biotite	178
7.19 Olivine	179
7.20 Zircon	179
7.21 Tourmaline	180
7.22 Allanite	181
7.23 Melilite	182
7.24 Magnetite	182
7.25 Chromite	183
7.26 Hematite	183
7.27 Ilmenite	184
7.28 Rutile	185
7.29 Uraninite	186
7.30 Pyrite	187
7.31 Pyrrhotite	187
7.32 Chalcopyrite	188
7.33 Apatite	189
Summary	189
Review questions	190
Further reading	191

8

HOW DO IGNEOUS ROCKS FORM?	193
8.1 Why, and how, does solid rock become molten?	195

8.1.1	Composition of the upper mantle	195
8.1.2	Melting range of upper-mantle peridotite	195
8.1.3	Geothermal gradient and the geotherm	197
8.2	Three primary causes of melting and their plate tectonic settings	198
8.2.1	Raising the temperature of mantle peridotite to the melting range over hot spots	198
8.2.2	Decompression melting at divergent plate boundaries	198
8.2.3	Fluxing with water at convergent plate boundaries (subduction zones)	198
8.3	Melting processes in rocks	199
8.3.1	Melting of a mixture of minerals	199
8.3.2	Melting of a pair of minerals: the eutectic	201
8.3.3	Congruent melting and the granite and nepheline syenite eutectics	204
8.3.4	Incongruent melting and the peritectic	206
8.3.5	Melting relations of solid solutions	207
8.4	Effect of pressure on melting	210
8.4.1	Effect of pressure on the anhydrous melting of rock	211
8.4.2	Hydrous melting of rock and the solubility of water in magma	211
8.4.3	Solubility of other gases in magma	213
8.4.4	Exsolution of magmatic gases and explosive volcanism	214
8.5	Physical properties of magma	217
8.5.1	Magma density	217
8.5.2	Magma viscosity	217
8.5.3	Diffusion in magma, crystal growth, and grain size of igneous rocks	219
8.6	Magma ascent	220
8.6.1	Buoyancy	220
8.6.2	Buoyant rise of magma	221
8.7	Processes associated with the solidification of magma in the crust	223
8.7.1	Cooling of bodies of magma by heat conduction	224
8.7.2	Cooling of bodies of magma by convection and radiation	225
8.7.3	Magmatic differentiation by crystal settling	227
8.7.4	Compaction of crystal mush	229
8.7.5	Assimilation and fractional crystallization	229
8.7.6	Liquid immiscibility	231
	Summary	232
	Review questions	233

9

IGNEOUS ROCKS: THEIR MODE OF OCCURRENCE, CLASSIFICATION, AND PLATE TECTONIC SETTING

9.1	Why an igneous rock classification is necessary	238
9.2	Mode of occurrence of igneous rocks	238
9.2.1	Shallow intrusive igneous bodies: dikes, sills, laccoliths, cone sheets, ring dikes, and diatremes	238
9.2.2	Plutonic igneous bodies: lopoliths, batholiths, and stocks	243
9.2.3	Extrusive igneous bodies: flood basalts, shield volcanoes, composite volcanoes, domes, calderas, ash-fall and ash-flow deposits	247
9.3	International Union of Geological Sciences classification of igneous rocks	258
9.3.1	Mode and norm	258
9.3.2	IUGS classification of igneous rocks	258
9.3.3	Composition of common plutonic igneous rocks	263
9.3.4	IUGS classification of volcanic igneous rocks	264
9.3.5	Irvine-Baragar classification of volcanic rocks	265
9.4	Igneous rocks and their plate tectonic setting	266
9.4.1	Igneous rocks formed at midocean-ridge divergent plate boundaries	266
9.4.2	Igneous rocks of oceanic islands formed above hot spots	270
9.4.3	Continental flood basalts and large igneous provinces	270
9.4.4	Alkaline igneous rocks associated with continental rift valleys	271
9.4.5	Igneous rocks formed near convergent plate boundaries	274
9.5	Special Precambrian associations	280
9.5.1	Komatiites	280
9.5.2	Massif-type anorthosites	281
9.5.3	Rocks associated with large meteorite impacts	283
	Summary	285
	Review questions	286
	Online resources	287
	Further reading	287

SEDIMENTARY ROCK-FORMING MINERALS AND MATERIALS

289

10.1	The interaction of the Earth's atmosphere with minerals	290
10.2	Ice	292
10.3	Goethite	293
10.4	Kaolinite	295
10.5	Calcite	295
10.6	Aragonite	297
10.7	Dolomite	297
10.8	Magnesite	298
10.9	Siderite	299
10.10	Rhodochrosite	300
10.11	Halite	300
10.12	Sylvite	301
10.13	Gypsum	301
10.14	Anhydrite	303
10.15	Chert and agate	303
10.16	Phosphorite	305
10.17	Soil	305
	Summary	306
	Review questions	307
	Further reading	307

11

FORMATION, TRANSPORT, AND LITHIFICATION OF SEDIMENT

309

11.1	Importance of sediments in understanding the history of the Earth	310
11.2	Sediment formed from weathering of rock	311
11.2.1	Role of carbon dioxide in weathering	311
11.2.2	Weathering products of rock	312
11.2.3	Detrital grain size	313
11.2.4	Detrital grain roundness and resistance to abrasion	315
11.3	Organically produced sediment	316
11.3.1	Formation of carbonate and siliceous sediment	316
11.3.2	Formation of hydrocarbons in sediment	319
11.4	Chemically produced sediment	319
11.5	Sediment produced by glacial erosion	320
11.6	Transport of sediment	321
11.6.1	Laminar and turbulent flow	321
11.6.2	Movement of particles by fluid flow	322
11.6.3	Movement of particles in turbidity currents	326
11.6.4	Movement of sediment in debris flows	327

11.7	Layering in sediments and sedimentary rocks	327
11.7.1	Law of superposition	328
11.7.2	Milankovitch cycles	328
11.7.3	Sediments related to tectonic processes	329
11.8	Sites of deposition and tectonic significance	330
11.8.1	Convergent plate boundaries	330
11.8.2	Passive continental margins	331
11.8.3	Rift and pull-apart basins	331
11.9	Conversion of unconsolidated sediment to sedimentary rock: lithification	332
11.9.1	Porosity and compaction	332
11.9.2	Cementation of sediment	333
11.9.3	Pressure solution	334
11.9.4	Recrystallization, replacement, dolomitization	334
	Summary	335
	Review questions	336
	Online resources	337
	Further reading	337

12

SEDIMENTARY ROCK CLASSIFICATION, OCCURRENCE, AND PLATE TECTONIC SIGNIFICANCE

339

12.1	Siliciclastic sedimentary rocks	340
12.1.1	Mudrocks (includes shales)	340
12.1.2	Sandstones	343
12.1.3	Conglomerates and breccias	350
12.2	Carbonate sedimentary rocks	352
12.2.1	Limestones	352
12.2.2	Dolostones	360
12.2.3	Tectonic settings of carbonate rocks	360
12.3	Coals	360
12.4	Oil and natural gas	361
12.5	Evaporites	362
12.6	Phosphorites	363
12.7	Iron-formations	363
	Summary	363
	Review questions	364
	Online resources	365
	Further reading	365

13

METAMORPHIC ROCK-FORMING MINERALS

367

13.1	Systematic mineralogical descriptions of common metamorphic minerals	368
13.2	Garnet	368
13.3	Andalusite	370

13.4	Sillimanite	370
13.5	Kyanite	371
13.6	Staurolite	371
13.7	Diopside	372
13.8	Anthophyllite	372
13.9	Cummingtonite-grunerite	373
13.10	Tremolite-ferroactinolite	373
13.11	Glaucophane	374
13.12	Wollastonite	375
13.13	Rhodonite	376
13.14	Talc	376
13.15	Chlorite	377
13.16	Antigorite	378
13.17	Chrysotile	379
13.18	Epidote and clinozoisite	380
13.19	Cordierite	381
13.20	Vesuvianite	381
13.21	Titanite (sphene)	382
13.22	Scapolite	382
13.23	Lawsonite	383
13.24	Pumpellyite	384
13.25	Topaz	384
13.26	Corundum	385
13.27	Chabazite	386
	Summary	388
	Review questions	389
	Further reading	389

14

METAMORPHIC ROCKS	391
14.1 What changes occur during metamorphism?	392
14.2 Why do rocks change?	394
14.2.1 Thermodynamics and the reason for change	394
14.2.2 Rates of metamorphic reactions	396
14.2.3 Gibbs phase rule and the number of minerals a metamorphic rock can contain	396
14.3 Metamorphic grade and facies	398
14.4 Textures of metamorphic rocks	401
14.4.1 Textures of contact metamorphic rocks	401
14.4.2 Deformation and textures of regional metamorphic rocks	402
14.5 Simple descriptive classification of metamorphic rocks	408
14.6 Metamorphism of mudrock	408
14.6.1 Graphical representation of a simple metamorphic reaction	409
14.6.2 A simple pressure-temperature petrogenetic grid	410
14.6.3 Metamorphic field gradients	411

14.6.4	Graphical representation of mineral assemblages in metapelites	411
14.6.5	Mineral assemblages in Barrow's metamorphic zones and part of the petrogenetic grid for metapelites	413
14.7	Metamorphism of impure dolomitic limestone	415
14.8	Metamorphism and partial melting: migmatites	419
14.9	Geothermometers and geobarometers	420
14.10	Plate tectonic significance of metamorphism	421
	14.10.1 Pressure-temperature-time (<i>P-T-t</i>) paths	422
	14.10.2 Plate tectonic setting of metamorphic facies	424
	Summary	425
	Review questions	427
	Further reading	428

15

SOME ECONOMIC MINERALS, MAINLY		
FROM VEINS AND PEGMATITES		431
15.1	Gold	432
15.2	Silver	433
15.3	Copper	433
15.4	Diamond	434
15.5	Sulfur	435
15.6	Galena	436
15.7	Sphalerite	436
15.8	Bornite	438
15.9	Chalcocite	439
15.10	Marcasite	439
15.11	Molybdenite	440
15.12	Arsenopyrite	441
15.13	Bauxite	442
15.14	Fluorite	442
15.15	Barite	443
15.16	Spodumene	444
15.17	Lepidolite	444
15.18	Several gem minerals	444
	Summary	448
	Review questions	449
	Further reading	449

16

SOME SELECTED EARTH MATERIALS	
RESOURCES	451
16.1 Construction materials	452
16.1.1 Building stones	452
16.1.2 Bricks, cement, and concrete	454
16.1.3 Crushed stone, sand, and gravel	455

16.2	Iron ore	456	17.3.1	Erionite	474
16.3	Clay minerals	457	17.3.2	Asbestos minerals	474
16.4	Copper ore	459	17.3.3	Silica minerals	476
16.5	Lithium ore	460	17.3.4	Arsenic, an example of a chemically hazardous Earth material	476
16.6	Rare earth elements	461	17.3.5	Health hazards due to radioactivity	477
16.7	Zeolites	461	17.3.6	Carbon sequestration to mitigate climate change	478
16.8	Energy resources	462	17.4	Hazards from volcanic eruptions	479
16.8.1	Oil, natural gas, and coal reserves	462	17.4.1	Monitoring active volcanoes	481
16.8.2	Nuclear energy	464	17.4.2	Lahars	482
16.8.3	Geothermal energy	464	17.5	Tsunamis	483
Summary		465	17.6	Ejecta from meteorite impacts	483
Review questions		466	Summary		484
Online resources		467	Review questions		486
Further reading		467	Online resources		486
			Further reading		487
17					
EARTH MATERIALS AND HUMAN HEALTH	469				
17.1	The human body's need for Earth materials	470	Glossary		489
17.2	Soils and human health	470	Minerals and varieties		515
17.2.1	What constitutes a fertile soil?	470	Common igneous, sedimentary, and metamorphic rocks		517
17.2.2	Increasing crop production from agricultural land and soil depletion	471	Index		519
17.2.3	The need for fertilizers	472			
17.3	Carcinogenic and chemical hazards posed by Earth materials	474
