

Contents

1	Introduction	1
1.1	Aims and Concepts	1
1.2	Outline of the Book and a Lot of References	2
1.3	Some Personal Thoughts	4
1.4	Problems	5
	References	6
2	Maxwell's Equations, Photons and the Density of States	11
2.1	Maxwell's Equations	11
2.2	Electromagnetic Radiation in Vacuum	14
2.3	Electromagnetic Radiation in Matter; Linear Optics	18
2.4	Transverse, Longitudinal and Surface Waves	22
2.5	Photons and Some Aspects of Quantum Mechanics and of Dispersion Relations	23
2.6	Density of States and Occupation Probabilities	28
2.7	Problems	35
	References	36
3	Interaction of Light with Matter	39
3.1	Macroscopic Aspects for Solids	39
3.1.1	Boundary Conditions	39
3.1.2	Laws of Reflection and Refraction	42
3.1.3	Noether's Theorem and Some Aspects of Conservation Laws	44
3.1.4	Reflection and Transmission at an Interface and Fresnel's Formulae	45
3.1.5	Extinction and Absorption of Light	50
3.1.6	Transmission Through a Slab of Matter and Fabry Perot Modes	51
3.1.7	Birefringence and Dichroism	54
3.1.8	Optical Activity	63

3.2	Microscopic Aspects	64
3.2.1	Absorption, Stimulated and Spontaneous Emission, Virtual Excitation	64
3.2.2	Perturbative Treatment of the Linear Interaction of Light with Matter	68
3.3	Problems	73
	References	74
4	Ensemble of Uncoupled Oscillators	77
4.1	Equations of Motion and the Dielectric Function	78
4.2	Corrections Due to Quantum Mechanics and Local Fields	81
4.3	Spectra of the Dielectric Function and of the Complex Index of Refraction	83
4.4	The Spectra of Reflection and Transmission	89
4.5	Interaction of Close Lying Resonances	93
4.6	Problems	94
	References	95
5	The Concept of Polaritons	97
5.1	Polaritons as New Quasiparticles	98
5.2	Dispersion Relation of Polaritons	100
5.3	Polaritons in Solids, Liquids and Gases and From the IR to the X-ray Region	105
5.3.1	Common Optical Properties of Polaritons	105
5.3.2	How the k -vector Develops	109
5.4	Coupled Oscillators and Polaritons with Spatial Dispersion	113
5.4.1	Dielectric Function and the Polariton States with Spatial Dispersion	115
5.4.2	Reflection and Transmission and Additional Boundary Conditions	118
5.5	Real and Imaginary Parts of Wave Vector and Frequency	122
5.6	Surface Polaritons	123
5.7	Problems	125
	References	126
6	Kramers–Kronig Relations	129
6.1	General Concepts	129
6.2	Problem	133
	References	134
7	Crystals, Lattices, Lattice Vibrations and Phonons	135
7.1	Adiabatic Approximation	135
7.2	Lattices and Crystal Structures in Real and Reciprocal Space	137
7.3	Vibrations of a String	142
7.4	Linear Chains	144
7.5	Three-Dimensional Crystals	150

7.6	Quantization of Lattice Vibrations: Phonons and the Concept of Quasiparticles	151
7.7	The Density of States and Phonon Statistics	155
7.8	Phonons in Alloys	158
7.9	Defects and Localized Phonon Modes	159
7.10	Phonons in Superlattices and in Other Structures of Reduced Dimensionality	161
7.11	Problems	165
	References	165
8	Electrons in a Periodic Crystal	167
8.1	Bloch's Theorem	168
8.2	Metals, Semiconductors, Insulators	171
8.3	An Overview of Semiconducting Materials	174
8.4	Electrons and Holes in Crystals as New Quasiparticles	178
8.5	The Effective-Mass Concept	180
8.6	The Polaron Concept and Other Electron–Phonon Interaction Processes	184
8.7	Some Basic Approaches to Band Structure Calculations	187
8.8	Bandstructures of Real Semiconductors	196
8.9	Density of States, Occupation Probability and Critical Points	203
8.10	Electrons and Holes in Quantum Wells and Superlattices	207
8.11	Growth of Quantum Wells and of Superlattices	217
8.12	Quantum Wires	222
8.13	Quantum Dots	224
8.14	Defects, Defect States and Doping	228
8.15	Disordered Systems and Localization	233
8.16	Problems	243
	References	244
9	Excitons, Biexcitons and Trions	249
9.1	Wannier and Frenkel Excitons	250
9.2	Corrections to the Simple Exciton Model	255
9.3	The Influence of Dimensionality	258
9.4	Biexcitons and Trions	263
9.5	Bound Exciton Complexes	264
9.6	Excitons in Disordered Systems	265
9.7	Problems	268
	References	269
10	Plasmons, Magnons and Some Further Elementary Excitations	273
10.1	Plasmons, Pair Excitations and Plasmon–Phonon Mixed States	273
10.2	Magnons and Magnetic Polarons	279
10.3	Problems	280
	References	281

11	Optical Properties of Phonons	283
11.1	Phonons in Bulk Semiconductors	283
11.1.1	Reflection Spectra	283
11.1.2	Raman Scattering	285
11.1.3	Phonon Polaritons	288
11.1.4	Brillouin Scattering	290
11.1.5	Surface Phonon Polaritons	290
11.1.6	Phonons in Alloys	292
11.1.7	Defects and Localized Phonon Modes	293
11.2	Phonons in Superlattices	293
11.2.1	Backfolded Acoustic Phonons	294
11.2.2	Confined Optic Phonons	294
11.2.3	Interface Phonons	295
11.3	Phonons in Quantum Dots	297
11.4	Phonon Dynamics	297
11.5	Problems	298
	References	299
12	Optical Properties of Plasmons, Plasmon–Phonon Mixed States and of Magnons	301
12.1	Surface Plasmons	301
12.2	Plasmon–Phonon Mixed States	303
12.3	Plasmons in Systems of Reduced Dimensionality	304
12.4	Optical Properties of Magnons	306
12.5	Problems	307
	References	307
13	Optical Properties of Intrinsic Excitons in Bulk Semiconductors	309
13.1	Excitons with Strong Oscillator Strength	309
13.1.1	Exciton–Photon Coupling	310
13.1.2	Consequences of Spatial Dispersion	313
13.1.3	Spectra of Reflection, Transmission and Luminescence	314
13.1.4	Spectroscopy in Momentum Space	331
13.1.5	Surface-Exciton Polaritons	338
13.1.6	Excitons in Organic Semiconductors and in Insulators	339
13.1.7	Optical Transitions Above the Fundamental Gap and Core Excitons	342
13.2	Forbidden Exciton Transitions	346
13.2.1	Direct Gap Semiconductors	347
13.2.2	Indirect Gap Semiconductors	351
13.3	Intraexcitonic Transitions	355
13.4	Problems	357
	References	358

14	Optical Properties of Bound and Localized Excitons and of Defect States	363
