

# CONTENTS

<b>1 States and observables</b>	<b>1</b>
1.1 Probabilistic description	1
1.2 States and observables	2
1.3 Functions of observables	3
1.4 The expectation value of an observable	7
1.5 Mixture and pure states	8
1.6 The physical topology of the states	13
1.7 Equivalent theories	14
1.8 Symmetries	16
<b>2 Quantum theory</b>	<b>19</b>
2.1 The quantum mechanical description	19
2.2 Algebraic viewpoint	27
2.3 The representation associated with a state: GNS construction	33
2.4 The symmetries of quantum mechanics	42
2.5 Symmetries from the algebraic point of view	53
<b>3 The relativistic symmetry</b>	<b>58</b>
3.1 Minkowski space	58
3.2 The inhomogeneous Lorentz group	59
3.3 The relativistic symmetry in quantum mechanics	61
3.4 Irreducible representations and one-particle states	66
3.5 Free particle system and Fock space	70
3.6 Energy momentum	75
<b>4 Local observables</b>	<b>78</b>
4.1 General properties of local observables	78
4.2 The vacuum state	80
4.3 Irreducibility	84
4.4 Mass gap and exponential clustering property	89
4.5 The JLD representation	92
4.6 Truncated expectation values and multiple clustering property	97
4.7 Additivity assumption and Reeh-Schlieder theorem	100
4.8 Quantum field theory	102
4.9 From quantum fields to local observables	106
<b>5 Scattering theory</b>	<b>108</b>
5.1 The concept of scattering states and the $S$ -matrix	108
5.2 Description of asymptotic states	111

5.3	Construction of asymptotic states	113
5.4	The counter interpretation of asymptotic states—verification of an appropriate asymptotic behaviour	128
5.5	Asymptotic conditions and reduction formula for the $S$ -matrix	133
5.6	Analyticity and TCP symmetry	151
<b>6</b>	<b>Sector theory</b>	<b>160</b>
6.1	Superselection rules and localized excitations	160
6.2	Localized endomorphisms and sectors	166
6.3	Permutation of excitations and statistics of a sector	171
6.4	Charge conjugate sector	181
6.5	Operator algebra system of fields and gauge groups	184
6.6	Theory of local charges	187
<b>Appendix A: Hilbert space and operators</b>		<b>193</b>
A.1	Hilbert space	193
A.2	Pre-Hilbert space and completion	194
A.3	Orthonormal basis	195
A.4	Unitary and antiunitary maps	196
A.5	Subspaces and projection operators	198
A.6	Direct sum and direct integral	199
A.7	Spectral decomposition	201
A.8	Trace	203
A.9	Unbounded operators	204
A.10	One-parameter group of unitary operators	205
A.11	Tensor product	206
<b>Appendix B: Operator algebras</b>		<b>208</b>
B.1	$C^*$ algebras	208
B.2	Von Neumann algebras	210
<b>Appendix C: Free fields</b>		<b>216</b>
C.1	Charged scalar field	216
C.2	One particle system with positive mass and arbitrary spin	217
C.3	Examples of free fields with positive mass and integer spin	218
C.4	Examples of free fields with positive mass and half odd integer spin	220
<b>General literature and references</b>		<b>222</b>
	References for Chapter 1	224
	References for Chapter 2	224
	References for Chapter 3	225
	References for Chapter 4	226
	References for Chapter 5	227
	References for Chapter 6	230
	Literature for appendices	232
