

Contents

- 1 Epistemic Enhancers 3
 - 1.1 Extrapolation, Conversion, and Augmentation 3
 - 1.2 Science Neither by the People nor for the People 6

- 2 Scientific Empiricism 9
 - 2.1 Empiricism and Reliable Detection 9
 - 2.2 The Dilution Argument 12
 - 2.3 Accuracy, Precision, and Resolution 16
 - 2.4 The Overlap Argument 17
 - 2.5 Property Cluster Realism 22
 - 2.6 Bridgman Revisited 25
 - 2.7 Instruments as Property Detectors 28
 - 2.8 Know Thy Instruments 30
 - 2.9 Properties 41
 - 2.10 Epistemic Security 45

- 3 Computational Science 49
 - 3.1 The Rise of Computational Science 49
 - 3.2 Two Principles 55
 - 3.3 Units of Analysis 57
 - 3.4 Computational Templates 60
 - 3.5 "The Same Equations Have the Same Solutions":
Reorganizing the Sciences 67
 - 3.6 Template Construction 72
 - 3.7 Correction Sets, Interpretation, and Justification 76
 - 3.8 Selective Realism 82
 - 3.9 Further Consequences 85
 - 3.10 Templates Are Not Always Built on Laws or Theories 88
 - 3.11 The Role of Subject-Specific Knowledge in the
Construction and Evaluation of Templates 91

3.12	Syntax Matters	95
3.13	A Brief Comparison with Kuhn's Views	100
3.14	Computational Models	102
4	Computer Simulations	105
4.1	A Definition	105
4.2	Some Advantages of Computer Simulations	114
4.3	The Microscope Metaphor and Technological Advances	116
4.4	Observable, Detectable, and Tractable	121
4.5	Other Kinds of Simulation	125
4.6	Agent-Based Modeling	129
4.7	Deficiencies of Simulations	133
5	Further Issues	137
5.1	Computer Simulation as Neo-Pythagoreanism	137
5.2	Abstraction and Idealization	141
5.3	Epistemic Opacity	147
5.4	Logical Form and Computational Form	151
5.5	In Practice, Not in Principle	153
5.6	Conclusion	156
