CONTENTS

List of Figures and Tables		**vii**
Series Editor's Introduction		**viii**
Acknowledgments		**x**
1.	**Generalized Linear Models**	**1**
2.	**Some Basic Modeling Concepts**	**6**
	Categorical Independent Variables	7
	Essential Components of Regression Modeling	9
3.	**Classical Multiple Regression Model**	**10**
	Assumptions and Modeling Approach	12
	Results of Regression Analysis	13
	Multiple Correlation	14
	Testing Hypotheses	15
4.	**Fundamentals of Generalized Linear Modeling**	**18**
	Exponential Family of Distributions	20
	Classical Normal Regression	21
	Logistic Regression	22
	Poisson Regression	22
	Proportional Hazards Survival Model	23
5.	**Maximum Likelihood Estimation**	**23**
6.	**Deviance and Goodness of Fit**	**31**
	Using Deviances to Test Statistical Hypotheses	32
	Goodness of Fit	33
	Assessing Goodness of Fit by Residual Analysis	33
7.	**Logistic Regression**	**35**
	Example of Logistic Regression	39
8.	**Poisson Regression**	**43**
	Example of Poisson Regression Model	45
9.	**Survival Analysis**	**52**
	Survival Time Distributions	53

Dunteman, George H.
An introduction to generalized linear models
