Intr	oductio	n	xv		
1	Hist	ory of the Subject	1		
	1.1	History of the Idea	1		
	1.2	Deficiencies of the Riemann Integral	3		
	1.3	Motivation for the Lebesgue Integral	6		
2	Fields, Borel Fields, and Measures				
	2.1	Fields, Monotone Classes, and Borel Fields	11		
	2.2	Additive Measures	18		
	2.3	Carathéodory Outer Measure	20		
	2.4	E. Hopf's Extension Theorem	24		
		2.4.1 Fields, σ -Fields, and Measures Inherited by a Subset	29		
3	Lebe	esgue Measure	31		
			vii		

	3.1	The Finite Interval $[-N, N)$	31
	3.2	Measurable Sets, Borel Sets, and the Real Line	34
		3.2.1 Lebesgue Measure on \mathbb{R}	36
	3.3	Measure Spaces and Completions	38
		3.3.1 Minimal Completion of a Measure Space	41
		3.3.2 A Nonmeasurable Set	41
	3.4	Semimetric Space of Measurable Sets	43
	3.5	Lebesgue Measure in \mathbb{R}^n	50
	3.6	Jordan Measure in \mathbb{R}^n	52
4	Меа	surable Functions	55
	4.1	Measurable Functions	55
		4.1.1 Baire Functions of Measurable Functions	56
	4.2	Limits of Measurable Functions	58
	4.3	Simple Functions and Egoroff's Theorem	61
		4.3.1 Double Sequences	63
		4.3.2 Convergence in Measure	65
	4.4	Lusin's Theorem	66
_		I	
5	The	Integral	69
5	The 5.1	Special Simple Functions	69
5	The 5.1 5.2	Special Simple Functions Extending the Domain of the Integral	69 69 72
5	The 5.1 5.2	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions	69 69 72 74
5	The 5.1 5.2	IntegralSpecial Simple FunctionsExtending the Domain of the Integral5.2.1The Class \mathcal{L}^+ of Nonnegative Measurable Functions5.2.2The Class \mathcal{L} of Lebesgue Integrable Functions	69 72 74 78
5	The 5.1 5.2	IntegralSpecial Simple FunctionsExtending the Domain of the Integral $5.2.1$ The Class \mathcal{L}^+ of Nonnegative Measurable Functions $5.2.2$ The Class \mathcal{L} of Lebesgue Integrable Functions $5.2.3$ Convex Functions and Jensen's Inequality	69 72 74 78 81
5	The 5.1 5.2 5.3	IntegralSpecial Simple FunctionsExtending the Domain of the Integral5.2.1The Class \mathcal{L}^+ of Nonnegative Measurable Functions5.2.2The Class \mathcal{L} of Lebesgue Integrable Functions5.2.3Convex Functions and Jensen's InequalityLebesgue Dominated Convergence Theorem	69 72 74 78 81 83
5	The 5.1 5.2 5.3 5.4	IntegralSpecial Simple FunctionsExtending the Domain of the Integral $5.2.1$ The Class \mathcal{L}^+ of Nonnegative Measurable Functions $5.2.2$ The Class \mathcal{L} of Lebesgue Integrable Functions $5.2.3$ Convex Functions and Jensen's InequalityLebesgue Dominated Convergence TheoremMonotone Convergence and Fatou's Theorem	69 72 74 78 81 83 89
5	The 5.1 5.2 5.3 5.4 5.5	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence	69 72 74 78 81 83 89
5	The 5.1 5.2 5.3 5.4 5.5	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence Lemma	69 69 72 74 78 81 83 89 92
5	The 5.1 5.2 5.3 5.4 5.5 5.6	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence Lemma Complex-Valued Functions	69 69 72 74 78 81 83 89 92 100
5	The 5.1 5.2 5.3 5.4 5.5 5.6 Prod	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence Lemma Complex-Valued Functions	69 69 72 74 78 81 83 89 92 100 103
6	The 5.1 5.2 5.3 5.4 5.5 5.6 Prod 6.1	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence Lemma Complex-Valued Functions Suct Measures and Fubini's Theorem Product Measures	69 69 72 74 78 81 83 89 92 100 103
6	The 5.1 5.2 5.3 5.4 5.5 5.6 Prod 6.1 6.2	Special Simple Functions Extending the Domain of the Integral 5.2.1 The Class \mathcal{L}^+ of Nonnegative Measurable Functions 5.2.2 The Class \mathcal{L} of Lebesgue Integrable Functions 5.2.3 Convex Functions and Jensen's Inequality Lebesgue Dominated Convergence Theorem Monotone Convergence and Fatou's Theorem Completeness of $L^1(X, \mathfrak{A}, \mu)$ and the Pointwise Convergence Lemma Complex-Valued Functions Nuct Measures and Fubini's Theorem Product Measures Fubini's Theorem	69 69 72 74 78 81 83 89 92 100 103 103 108

	7.1	Functions of Bounded Variation	123
	7.2	A Fundamental Theorem for the Lebesgue Integral	128
	7.3	Lebesgue's Theorem and Vitali's Covering Theorem	131
	7.4	Absolutely Continuous and Singular Functions	139
8	General Countably Additive Set Functions		
	8.1	Hahn Decomposition Theorem	152
	8.2	Radon-Nikodym Theorem	156
	8.3	Lebesgue Decomposition Theorem	161
9	Examples of Dual Spaces from Measure Theory		
	9.1	The Banach Space $L^p(X, \mathfrak{A}, \mu)$	165
	9.2	The Dual of a Banach Space	170
	9.3	The Dual Space of $L^p(X, \mathfrak{A}, \mu)$	174
	9.4	Hilbert Space, Its Dual, and $L^2(X, \mathfrak{A}, \mu)$	178
	9.5	Riesz-Markov-Saks-Kakutani Theorem	185
10	Translation Invariance in Real Analysis		195
	10.1	An Orthonormal Basis for $L^2(\mathbb{T})$	196
	10.2	Closed, Invariant Subspaces of $L^2(\mathbb{T})$	203
		10.2.1 Integration of Hilbert Space Valued Functions	204
		10.2.2 Spectrum of a Subset of $L^2(\mathbb{T})$	206
	10.3	Schwartz Functions: Fourier Transform and Inversion	208
	10.4	Closed, Invariant Subspaces of $L^2(\mathbb{R})$	213
		10.4.1 The Fourier Transform in $L^2(\mathbb{R})$	213
		10.4.2 Translation-Invariant Subspaces of $L^2(\mathbb{R})$	216
		10.4.3 The Fourier Transform and Direct Integrals	218
	10.5	Irreducibility of $L^2(\mathbb{R})$ Under Translations and Rotations	219
		10.5.1 Position and Momentum Operators	221
		10.5.2 The Heisenberg Group	222
Арр	endix:	The Banach-Tarski Theorem	225
	A.1	The Limits to Countable Additivity	225
