Introduction	x
1 A History of Econometrics at the University of California, San Diego: A Personal Viewpoint	1
<i>Clive W. J. Granger</i>	
1 Introduction	1
2 The Founding Years: 1974–1984	1
3 The Middle Years: 1985–1993	3
4 The Changing Years: 1994–2003	4
5 Graduate students	6
6 Visitors	6
7 Wives	8
8 The Econometrics Research Project	8
9 The UCSD Economics Department	8
10 The way the world of econometrics has changed	8
11 Visitors and students	9
2 The Long Run Shift-Share: Modeling the Sources of Metropolitan Sectoral Fluctuations	13
<i>N. Edward Coulson</i>	
1 Introduction	13
2 A general model and some specializations	14
3 Data and evidence	21
4 Summary and conclusions	33
3 The Evolution of National and Regional Factors in US Housing Construction	35
<i>James H. Stock and Mark W. Watson</i>	
1 Introduction	35
2 The state building permits data set	38
3 The DFM-SV model	45

4	Empirical results	49
5	Discussion and conclusions	60
4	Modeling UK Inflation Uncertainty, 1958–2006	62
	<i>Gianna Boero, Jeremy Smith, and Kenneth F. Wallis</i>	
1	Introduction	62
2	UK inflation and the policy environment	63
3	Re-estimating the original ARCH model	66
4	The nonstationary behavior of UK inflation	69
5	Measures of inflation forecast uncertainty	73
6	Uncertainty and the level of inflation	77
7	Conclusion	78
5	Macroeconomics and ARCH	79
	<i>James D. Hamilton</i>	
1	Introduction	79
2	GARCH and inference about the mean	81
3	Application 1: Measuring market expectations of what the Federal Reserve is going to do next	87
4	Application 2: Using the Taylor Rule to summarize changes in Federal Reserve policy	91
5	Conclusions	95
6	Macroeconomic Volatility and Stock Market Volatility, World-Wide	97
	<i>Francis X. Diebold and Kamil Yilmaz</i>	
1	Introduction	97
2	Data	99
3	Empirical results	100
4	Variations and extensions	105
5	Concluding remark	109
7	Measuring Downside Risk – Realized Semivariance	117
	<i>Ole E. Barndorff-Nielsen, Silja Kinnebrock, and Neil Shephard</i>	
1	Introduction	117
2	Econometric theory	122
3	More empirical work	128
4	Additional remarks	131
5	Conclusions	133

8 Glossary to ARCH (GARCH)	137
<i>Tim Bollerslev</i>	
9 An Automatic Test of Super Exogeneity	164
<i>David F. Hendry and Carlos Santos</i>	
1 Introduction	164
2 Detectable shifts	166
3 Super exogeneity in a regression context	170
4 Impulse saturation	173
5 Null rejection frequency of the impulse-based test	175
6 Potency at stage 1	179
7 Super-exogeneity failure	181
8 Co-breaking based tests	186
9 Simulating the potencies of the automatic super-exogeneity test	186
10 Testing super exogeneity in UK money demand	190
11 Conclusion	192
10 Generalized Forecast Errors, a Change of Measure, and Forecast Optimality	194
<i>Andrew J. Patton and Allan Timmermann</i>	
1 Introduction	194
2 Testable implications under general loss functions	196
3 Properties under a change of measure	200
4 Numerical example and an application to US inflation	202
5 Conclusion	209
11 Multivariate Autocontours for Specification Testing in Multivariate GARCH Models	213
<i>Gloria González-Rivera and Emre Yoldas</i>	
1 Introduction	213
2 Testing methodology	215
3 Monte Carlo simulations	219
4 Empirical applications	224
5 Concluding remarks	230
12 Modeling Autoregressive Conditional Skewness and Kurtosis with Multi-Quantile CAViaR	231
<i>Halbert White, Tae-Hwan Kim, and Simone Manganelli</i>	
1 Introduction	231
2 The MQ-CAViaR process and model	232

3	MQ-CAViaR estimation: Consistency and asymptotic normality	234
4	Consistent covariance matrix estimation	237
5	Quantile-based measures of conditional skewness and kurtosis	238
6	Application and simulation	239
7	Conclusion	246
13	Volatility Regimes and Global Equity Returns	257
	<i>Luis Catão and Allan Timmermann</i>	
1	Econometric methodology	261
2	Data	265
3	Global stock return dynamics	267
4	Variance decompositions	275
5	Economic interpretation: Oil, money, and tech shocks	281
6	Implications for global portfolio allocation	287
7	Conclusion	293
14	A Multifactor, Nonlinear, Continuous-Time Model of Interest Rate Volatility	296
	<i>Jacob Boudoukh, Christopher Downing, Matthew Richardson, Richard Stanton, and Robert F. Whitelaw</i>	
1	Introduction	296
2	The stochastic behavior of interest rates: Some evidence	298
3	Estimation of a continuous-time multifactor diffusion process	307
4	A generalized Longstaff and Schwartz (1992) model	313
5	Conclusion	321
15	Estimating the Implied Risk-Neutral Density for the US Market Portfolio	323
	<i>Stephen Figlewski</i>	
1	Introduction	323
2	Review of the literature	325
3	Extracting the risk-neutral density from options prices, in theory	329
4	Extracting a risk-neutral density from options market prices, in practice	331
5	Adding tails to the risk-neutral density	342
6	Estimating the risk-neutral density for the S&P 500 from S&P 500 index options	345
7	Concluding comments	352

16 A New Model for Limit Order Book Dynamics	354
<i>Jeffrey R. Russell and Taejin Kim</i>	
1 Introduction	354
2 The model	356
3 Model estimation	358
4 Data	358
5 Results	360
6 Conclusions	364
Bibliography	365
Index	401
