Acknowledgments	vii
1 What Is Biology?	1
2 Building with Biological Parts	8
3 Learning to Fly (or Yeast, Geese, and 747s)	20
4 The Second Coming of Synthetic Biology	33
5 A Future History of Biological Engineering	50
6 The Pace of Change in Biological Technologies	63
7 The International Genetically Engineered Machines Competition	81
8 Reprogramming Cells and Building Genomes	97
9 The Promise and Peril of Biological Technologies	108
10 The Sources of Innovation and the Effects of Existing and Proposed Regulations	131
11 Laying the Foundations for a Bioeconomy	150
12 Of Straitjackets and Springboards for Innovation	178
13 Open-Source Biology, or Open Biology?	200
14 What Makes a Revolution?	218
Afterword	240
Notes	243
Index	267
