<i>Preface</i>	vii
<i>List of Tables</i>	xv
1. Fundamentals	1
1.1 Dynamical Systems . . . . .	1
1.2 State Space . . . . .	2
1.3 Dissipation . . . . .	7
1.4 Limit Cycles . . . . .	8
1.5 Chaos and Strange Attractors . . . . .	10
1.6 Poincaré Sections and Fractals . . . . .	12
1.7 Conservative Chaos . . . . .	16
1.8 Two-tori and Quasiperiodicity . . . . .	18
1.9 Largest Lyapunov Exponent . . . . .	20
1.10 Lyapunov Exponent Spectrum . . . . .	24
1.11 Attractor Dimension . . . . .	29
1.12 Chaotic Transients . . . . .	31
1.13 Intermittency . . . . .	32
1.14 Basins of Attraction . . . . .	32
1.15 Numerical Methods . . . . .	36
1.16 Elegance . . . . .	37
2. Periodically Forced Systems	41
2.1 Van der Pol Oscillator . . . . .	41
2.2 Rayleigh Oscillator . . . . .	43
2.3 Rayleigh Oscillator Variant . . . . .	43
2.4 Duffing Oscillator . . . . .	44

2.5	Quadratic Oscillators . . . . .	47
2.6	Piecewise-linear Oscillators . . . . .	48
2.7	Signum Oscillators . . . . .	49
2.8	Exponential Oscillators . . . . .	51
2.9	Other Undamped Oscillators . . . . .	51
2.10	Velocity Forced Oscillators . . . . .	53
2.11	Parametric Oscillators . . . . .	55
2.12	Complex Oscillators . . . . .	57
3.	Autonomous Dissipative Systems . . . . .	61
3.1	Lorenz System . . . . .	61
3.2	Diffusionless Lorenz System . . . . .	64
3.3	Rössler System . . . . .	66
3.4	Other Quadratic Systems . . . . .	68
	3.4.1 Rössler prototype-4 system . . . . .	68
	3.4.2 Sprott systems . . . . .	68
3.5	Jerk Systems . . . . .	70
	3.5.1 Simplest quadratic case . . . . .	73
	3.5.2 Rational jerks . . . . .	76
	3.5.3 Cubic cases . . . . .	77
	3.5.4 Cases with arbitrary power . . . . .	79
	3.5.5 Piecewise-linear case . . . . .	80
	3.5.6 Memory oscillators . . . . .	82
3.6	Circulant Systems . . . . .	83
	3.6.1 Halvorsen's system . . . . .	84
	3.6.2 Thomas' systems . . . . .	85
	3.6.3 Piecewise-linear system . . . . .	86
3.7	Other Systems . . . . .	86
	3.7.1 Multiscroll systems . . . . .	87
	3.7.2 Lotka–Volterra systems . . . . .	88
	3.7.3 Chua's systems . . . . .	90
	3.7.4 Rikitake dynamo . . . . .	92
4.	Autonomous Conservative Systems . . . . .	95
4.1	Nosé–Hoover Oscillator . . . . .	95
4.2	Nosé–Hoover Variants . . . . .	97
4.3	Jerk Systems . . . . .	98
	4.3.1 Jerk form of the Nosé–Hoover oscillator . . . . .	98

4.3.2	Simplest conservative chaotic flow . . . . .	99
4.3.3	Other conservative jerk systems . . . . .	99
4.4	Circulant Systems . . . . .	101
4.4.1	Quadratic case . . . . .	102
4.4.2	Cubic case . . . . .	102
4.4.3	Labyrinth chaos . . . . .	105
4.4.4	Piecewise-linear system . . . . .	107
5.	Low-dimensional Systems ( $D < 3$ ) . . . . .	109
5.1	Dixon System . . . . .	109
5.2	Dixon Variants . . . . .	110
5.3	Logarithmic Case . . . . .	112
5.4	Other Cases . . . . .	114
6.	High-dimensional Systems ( $D > 3$ ) . . . . .	115
6.1	Periodically Forced Systems . . . . .	115
6.1.1	Forced pendulum . . . . .	116
6.1.2	Other forced nonlinear oscillators . . . . .	118
6.2	Master–slave Oscillators . . . . .	118
6.3	Mutually Coupled Nonlinear Oscillators . . . . .	120
6.3.1	Coupled pendulums . . . . .	121
6.3.2	Coupled van der Pol oscillators . . . . .	123
6.3.3	Coupled FitzHugh–Nagumo oscillators . . . . .	123
6.3.4	Coupled complex oscillators . . . . .	124
6.3.5	Other coupled nonlinear oscillators . . . . .	125
6.4	Hamiltonian Systems . . . . .	126
6.4.1	Coupled nonlinear oscillators . . . . .	128
6.4.2	Velocity coupled oscillators . . . . .	129
6.4.3	Parametrically coupled oscillators . . . . .	130
6.4.4	Simplest Hamiltonian . . . . .	130
6.4.5	Hénon–Heiles system . . . . .	132
6.4.6	Reduced Hénon–Heiles system . . . . .	133
6.4.7	$N$ -body gravitational systems . . . . .	134
6.4.8	$N$ -body Coulomb systems . . . . .	138
6.5	Anti-Newtonian Systems . . . . .	142
6.5.1	Two-body problem . . . . .	142
6.5.2	Three-body problem . . . . .	145
6.6	Hyperjerk Systems . . . . .	147

6.6.1	Forced oscillators . . . . .	147
6.6.2	Chlouverakis systems . . . . .	148
6.7	Hyperchaotic Systems . . . . .	152
6.7.1	Rössler hyperchaos . . . . .	153
6.7.2	Snap hyperchaos . . . . .	154
6.7.3	Coupled chaotic systems . . . . .	154
6.7.4	Other hyperchaotic systems . . . . .	156
6.8	Autonomous Complex Systems . . . . .	156
6.9	Lotka–Volterra Systems . . . . .	157
6.10	Artificial Neural Networks . . . . .	159
6.10.1	Minimal dissipative artificial neural network . . . . .	161
6.10.2	Minimal conservative artificial neural network . . . . .	162
6.10.3	Minimal circulant artificial neural network . . . . .	162
7.	Circulant Systems . . . . .	165
7.1	Lorenz–Emanuel System . . . . .	165
7.2	Lotka–Volterra Systems . . . . .	169
7.3	Antisymmetric Quadratic System . . . . .	171
7.4	Quadratic Ring System . . . . .	171
7.5	Cubic Ring System . . . . .	171
7.6	Hyperlabyrinth System . . . . .	173
7.7	Circulant Neural Networks . . . . .	174
7.8	Hyperviscous Ring . . . . .	176
7.9	Rings of Oscillators . . . . .	176
7.9.1	Coupled pendulums . . . . .	177
7.9.2	Coupled cubic oscillators . . . . .	177
7.9.3	Coupled signum oscillators . . . . .	178
7.9.4	Coupled van der Pol oscillators . . . . .	179
7.9.5	Coupled FitzHugh–Nagumo oscillators . . . . .	180
7.9.6	Coupled complex oscillators . . . . .	182
7.9.7	Coupled Lorenz systems . . . . .	182
7.9.8	Coupled jerk systems . . . . .	185
7.10	Star Systems . . . . .	185
7.10.1	Coupled pendulums . . . . .	187
7.10.2	Coupled cubic oscillators . . . . .	187
7.10.3	Coupled signum oscillators . . . . .	188
7.10.4	Coupled van der Pol oscillators . . . . .	190
7.10.5	Coupled FitzHugh–Nagumo oscillators . . . . .	191
7.10.6	Coupled complex oscillators . . . . .	191

7.10.7	Coupled diffusionless Lorenz systems . . . . .	193
7.10.8	Coupled jerk systems . . . . .	194
8.	Spatiotemporal Systems	195
8.1	Numerical Methods . . . . .	195
8.2	Kuramoto–Sivashinsky Equation . . . . .	199
8.3	Kuramoto–Sivashinsky Variants . . . . .	200
8.3.1	Cubic case . . . . .	201
8.3.2	Quartic case . . . . .	201
8.4	Chaotic Traveling Waves . . . . .	201
8.4.1	Rotating Kuramoto–Sivashinsky system . . . . .	203
8.4.2	Rotating Kuramoto–Sivashinsky variant . . . . .	203
8.5	Continuum Ring Systems . . . . .	204
8.5.1	Quadratic ring system . . . . .	204
8.5.2	Antisymmetric quadratic system . . . . .	205
8.5.3	Other simple PDEs . . . . .	207
8.6	Traveling Wave Variants . . . . .	212
9.	Time-Delay Systems	221
9.1	Delay Differential Equations . . . . .	221
9.2	Mackey–Glass Equation . . . . .	223
9.3	Ikeda DDE . . . . .	223
9.4	Sinusoidal DDE . . . . .	225
9.5	Polynomial DDE . . . . .	225
9.6	Sigmoidal DDE . . . . .	227
9.7	Signum DDE . . . . .	227
9.8	Piecewise-linear DDEs . . . . .	229
9.8.1	Antisymmetric case . . . . .	229
9.8.2	Asymmetric case . . . . .	229
9.8.3	Asymmetric logistic DDE . . . . .	230
9.9	Asymmetric Logistic DDE with Continuous Delay . . . . .	232
10.	Chaotic Electrical Circuits	233
10.1	Circuit Elegance . . . . .	233
10.2	Forced Relaxation Oscillator . . . . .	234
10.3	Autonomous Relaxation Oscillator . . . . .	237
10.4	Coupled Relaxation Oscillators . . . . .	239
10.4.1	Two oscillators . . . . .	239
10.4.2	Many oscillators . . . . .	241

10.5	Forced Diode Resonator . . . . .	242
10.6	Saturating Inductor Circuit . . . . .	243
10.7	Forced Piecewise-linear Circuit . . . . .	246
10.8	Chua's Circuit . . . . .	246
10.9	Nishio's Circuit . . . . .	249
10.10	Wien-bridge Oscillator . . . . .	251
10.11	Jerk Circuits . . . . .	254
	10.11.1 Absolute-value case . . . . .	254
	10.11.2 Single-knee case . . . . .	255
	10.11.3 Signum case . . . . .	256
	10.11.4 Signum variant . . . . .	258
10.12	Master-slave Oscillator . . . . .	259
10.13	Ring of Oscillators . . . . .	261
10.14	Delay-line Oscillator . . . . .	263
	<i>Bibliography</i> . . . . .	265
	<i>Index</i> . . . . .	281
