Contents

1	Introduction	1
1.1	Outline	1
1.2	Notations and conventions	3
1.3	Mathematical background	9
2	Three-dimensional elasticity	17
2.1	Introduction	17
2.2	Strain	18
2.3	Stress	33
2.4	Hookean elasticity	42
2.5	Stress and strain for finite displacements	47
2.6	Conclusion	56
	References	56
 PART I RODS		
3	Equations for elastic rods	59
3.1	Introduction	59
3.2	Geometry of a deformed rod, Darboux vector	61
3.3	Flexion	63
3.4	Twist	73
3.5	Energy	79
3.6	Equilibrium: Kirchhoff equations	82
3.7	Inextensibility, validity of Kirchhoff model	90
3.8	Mathematical analogy with the spinning top	92
3.9	The localized helix: an explicit solution	96
3.10	Conclusion	102
	References	102
4	Mechanics of the human hair	105
4.1	Dimensional analysis	106
4.2	Equilibrium equations	109
4.3	Weak gravity	111
4.4	Strong gravity	114
4.5	Extensions of the model	124
4.6	Conclusion	129
	References	130
5	Rippled leaves, uncoiled springs	132
5.1	Introduction	132
5.2	Governing equations	141
5.3	Helical solutions	143
5.4	Godet solutions	147

5.5	Conclusion	153
	References	154
PART II PLATES		
6	The equations for elastic plates	157
6.1	Bending versus stretching energy	158
6.2	Gauss' Theorema egregium	161
6.3	Developable surfaces	176
6.4	Membranes: stretching energy	184
6.5	Equilibrium: the Föppl–von Kármán equations	192
6.6	Elastic energy	199
6.7	Narrow plates: consistency with the theory of rods	205
6.8	Discussion	210
6.9	Conclusion	212
	References	213
7	End effects in plate buckling	214
7.1	A historical background on end effects	214
7.2	Geometry	215
7.3	Governing equations	217
7.4	Linear stability analysis	221
7.5	Buckling amplitude near threshold	224
7.6	Wavenumber selection by end effects	231
7.7	Experiments	247
7.8	Conclusion	249
	References	249
8	Finite amplitude buckling of a strip	251
8.1	A short review on buckling	252
8.2	The experiments	253
8.3	Equations for the compressed strip	256
8.4	Linear stability	260
8.5	The Euler column, an exact solution	265
8.6	Transition from finite to infinite wavelengths	273
8.7	Linear stability of the Euler column	282
8.8	Extension of the diagram	296
8.9	Comparison with buckling experiments	311
8.10	Application: interpretation of delamination patterns	314
8.11	Limitations and extensions of the model	318
8.12	Conclusion	321
	References	322
9	Crumpled paper	325
9.1	Introduction	325
9.2	Conical singularities	326
9.3	Ridge singularities	350

9.4 Conclusion	366
References	367
10 Fractal buckling near edges	369
10.1 Case of residual stress near a free edge	371
10.2 Case of a clamped edge	384
10.3 Summary and conclusion	398
References	398
 PART III SHELLS	
11 Geometric rigidity of surfaces	403
11.1 Introduction	404
11.2 Infinitesimal bendings of a weakly curved surface	406
11.3 Infinitesimal bendings: an intrinsic approach	408
11.4 Minimal surfaces, Weierstrass transform	415
11.5 Surfaces of revolution	416
11.6 Crowns: interpretation of rigidity, extension to arbitrary surfaces	429
11.7 Conclusion	432
References	433
12 Shells of revolution	435
12.1 Geometry	436
12.2 Constitutive relations	442
12.3 Equilibrium of membranes	444
12.4 Equilibrium of shells	448
12.5 Conclusion, extensions	452
References	453
13 The elastic torus	454
13.1 Introduction	454
13.2 Mechanical problem	457
13.3 Linearized membrane theory	460
13.4 Boundary layer equations	464
13.5 The curious case of pressurized circular toroidal shells	471
13.6 Boundary layer solution for moderate nonlinearity	473
13.7 Boundary layer solution for weak nonlinearity	475
13.8 Boundary layer solution for strong nonlinearity	486
13.9 Conclusion	487
References	488
14 Spherical shell pushed by a wall	490
14.1 Introduction	490
14.2 A short account of Hertz' contact theory	492
14.3 Point-like force on a spherical shell	494
14.4 Spherical shell pushed by a plane: overview	498
14.5 Equation for spherical shells	502
14.6 Spherical shell pushed by a plane: disc-like contact	510

14.7 Spherical shell pushed by a plane: circular contact	521
14.8 Stability of disc-like contact, transition to circular contact	532
References	543
Appendix A Calculus of variations: a worked example	546
A.1 Model problem: the Elastica	546
A.2 Discretization of energy using a Riemann sum	548
A.3 Calculus of variations: the Euler–Lagrange method	549
A.4 Handling additional constraints	550
A.5 Linear stability analysis	551
A.6 Exact solution	552
References	557
Appendix B Boundary and interior layers	558
B.1 Layer at an interior point	558
B.2 Layers near a boundary	565
References	567
Appendix C The geometry of helices	569
Appendix D Derivation of the plate equations by formal expansion from 3D elasticity	571
D.1 Introduction	571
D.2 Scaling assumptions	573
D.3 Basic equations	573
D.4 Expansion of the basic quantities	575
D.5 Solution at leading order	576
D.6 Conclusion	581
References	581
Index	583
