# List of Figures

3.1	A scheme of the state dynamics . . . . .	39
10.1	A simple finite, acyclic state transition model . . . . .	219
10.2	A simple finite, cyclic state transition model . . . . .	220
10.3	A simple acyclic sequential decision problem . . . . .	230
10.4	A cyclic problem . . . . .	236
10.5	An infeasible acyclic problem . . . . .	239
10.6	A simple acyclic sequential decision problem with stopping states . . . . .	244
10.7	Illegal multiple arcs between a pair of nodes . . . . .	249
10.8	Using a dummy node and a dummy arc . . . . .	249
10.9	Legal multiple arcs between a pair of nodes . . . . .	250
10.10	An unbounded cyclic shortest path problem . . . . .	250
10.11	Mystery shortest path problem . . . . .	252
10.12	Mystery shortest path problem . . . . .	253
11.1	Assignment problem . . . . .	308
11.2	State transition graph for the assignment problem . . . . .	308
11.3	Acyclic shortest path problem . . . . .	310
11.4	A note found on your lawn . . . . .	313
12.1	A shortest path problem . . . . .	341
13.1	Alleged counter-example . . . . .	368
14.1	Finding the shortest path from $B$ to $E$ . . . . .	389
14.2	Shortest path problem from $B$ to $E$ . . . . .	394
14.3	Shortest path problem from $E$ to $B$ . . . . .	397
14.4	Longest path problem . . . . .	408
14.5	Longest path problem . . . . .	413
15.1	A simple acyclic shortest path problem . . . . .	423
15.2	Summary of Pull operations . . . . .	423
15.3	A simple cyclic shortest path problem . . . . .	424
15.4	First iteration of the successive approximation method . . . . .	425
15.5	Second and third iteration . . . . .	425
15.6	First iteration of the successive approximation method . . . . .	426
15.7	A simple acyclic shortest path problem . . . . .	428

15.8	Final Push operation at $s = 8$ . . . . .	428
15.9	Successive approximation via forward Push . . . . .	429
15.10	Longest shortest arc problem . . . . .	438
15.11	Results of the Push procedure . . . . .	440
15.12	Simple cyclic shortest path problem . . . . .	443
15.13	Progression of Push operations . . . . .	446
15.14	Simple shortest path problem . . . . .	447
15.15	Results after the two Push operations ( $s=1,3$ ) . . . . .	447
16.1	Acyclic graph . . . . .	474
16.2	Towers of Hanoi problem with 3 pieces . . . . .	477
16.3	Towers of Hanoi problem with 3 pieces . . . . .	479
16.4	Solution to the Towers of Hanoi problem with 3 pieces . . . . .	481
E.1	Illustration of the Corridor Method . . . . .	538
E.2	The traveling salesman problem on a treasure island . . . . .	541
E.3	Initial incumbent: $\mathbf{x}^{(1)} = (1, 2, \dots, 26, 0)$ . . . . .	542
E.4	$\mathcal{V}(15)$ for $\Delta = 3$ . . . . .	543
