<i>Preface</i>	page xi
<i>Acknowledgments</i>	xix
Part One: The Internalization of Externalities as a Central Theme of Environmental Policy	1
A. Foundations	1
I. Object and Methods of Microeconomic Theory	1
II. The Equilibrium Concept in Microeconomic Theory	5
III. The “Social Optimality” of Market Equilibrium in the Ideal-Type Economic Model	9
IV. Divergences between Equilibrium and Social Optimum Due to Externalities: The Problem of “Market Failure”	14
V. The Internalization of Externalities to “Restore” the “Lost” Optimality of Market Equilibrium	19
B. Implications of Making the Concept of Internalization Programmatic in Environmental Policy	22
I. The Principle of Consumer Sovereignty	22
II. Ordinality and Cardinality of the Concept of Utility: Willingness to Pay as an Approximation	23
III. From Individual Utility to Social Welfare: The Aggregation Problem	24
IV. Consequences	25
V. Nonetheless: Internalization of Externalities as an Indispensable Component of an Environmental Policy Vision	27
Exercises	29

Part Two: Strategies for Internalizing Externalities	32
A. Negotiations	32
I. The Coase Theorem	32
II. Critique and Extensions of the Coase Theorem	38
1. Distribution and Allocation	38
2. The Bilateral Monopoly between Negotiating Parties	41
3. Polluters and Victims as Heterogeneous Groups: The Prisoner's Dilemma Problem	42
4. Coase's Theorem and Environmental Policy: The Problem of Transaction Costs	43
B. Environmental Liability Law	50
I. Introduction	50
II. The Basic Economic Model of Environmental Liability Law	54
1. Emission Equilibria under the Negligence Rule	54
2. Emission Equilibria under Strict Liability	57
3. The Negligence Rule and Strict Liability Compared	58
4. Model Prerequisites	59
III. Problems with Internalizing Externalities through Liability Law	60
1. Complete Divergence between Damage and Compensation Payment	62
2. Partial Divergence: Partial Damage Discounting with Limitation of Liability	63
3. Other Problems	66
IV. Allocation Effects of Insuring Environmental Risk	68
1. Preliminary Remarks	68
2. Care Equilibria with Risk Aversion	70
3. Care Equilibria with Insurance at a Fair Premium	71
4. Care Equilibria with Insurance with Moral Hazard	72
5. Care Equilibria with Insurance with "Own Risk" Excess and a Contractually Agreed Level of Care	73
V. The German Environmental Liability Act	75
VI. U.S. "Superfund" Liability	81
1. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)	81
2. On the Economics of Joint and Several Strict Liability	83
C. Pigovian Tax	93
Exercises	99

Part Three: Standard-Oriented Instruments of Environmental Policy	102
A. Introduction	102
B. Types of Environmental Policy Instruments	108
I. Command and Control	108
II. Emissions Taxes	109
III. Transferable Discharge Permits	110
1. Conceptions	110
2. Practical Examples: Emissions Trading Systems in U.S. Environmental Policy	114
C. Assessment of Environmental Policy Instruments	121
I. Cost-Effectiveness	121
1. The Individual Polluting Firm	121
2. The Totality of Polluting Firms	123
3. Graphic Depiction	125
II. Dynamic Incentive Effect	130
III. Ecological Precision	141
1. Exogenous Emission Standards	141
2. Time Needed for Adjustment	144
3. End-Means Interdependence	145
4. Emission Reduction with No Fixed Target Value	146
5. Conservation of "Natural" Falls in Emissions	146
6. Environmental Policy Covering Several Pollutants	148
7. Immission-Oriented Environmental Policy	148
8. Tradable Emission Permits: Gratification of Environmental Policy Abstinence?	150
Exercises	150
 Part Four: Extensions of the Basic Environmental Economics Model	 153
A. Environmental Policy with Pollutant Interactions	153
I. Pollutant Interactions and Environmental Policy Target Setting	153
II. Linear Interaction	155
III. Concave Interaction	158
IV. Nonconcave Interaction	160
V. Conclusion	160
B. Environmental Policy with Imperfect Competition	161
C. Internalization Negotiations with Asymmetrical Information	167
D. The "Double Dividend" of Green Tax	174
E. The Induction of Advances in Environmental Technology through Environmental Policy	187

I.	Preliminary Remarks	187
II.	Internalization of Externalities and Induced Advances in Environmental Technology	189
III.	Standard-Oriented Instruments and Induced Advances in Environmental Technology	194
IV.	The Economics of an Ecological Technology Policy Exercises	200 201
Part Five: International Environmental Problems		205
A.	Introduction	205
B.	International Environmental Agreements	210
I.	The Game Theoretic Interpretation	211
1.	Global Optimum and Nash Equilibrium	211
2.	The Problem of Incentive Compatibility: The Individual Rationality and Stability of International Environmental Agreements	221
3.	An Alternative Description: Global Environmental Problems as a Static Prisoner's Dilemma in Normal Form	228
4.	Generalization of the Game Structure	231
5.	Instruments to Enhance the Propensity to Cooperate	235
6.	Coalition Formation in International Environmental Negotiations	239
7.	Prospects for the Game Theoretic Analysis of Global Environmental Problems	246
8.	Epilogue: The Prisoner's Dilemma – A Phantom Pain of Game Theorists?	247
II.	The Kyoto Protocol from an Economic Viewpoint	250
1.	Presentation	250
2.	Environmental Economics Assessment	256
3.	Prospects	266
C.	Instruments of International Environmental Policy – The Example of the European Union's Emissions Trading	270
I.	Presentation	270
II.	Environmental Economics Assessment	272
1.	Ecological Precision	273
2.	Cost-Effectiveness	275
3.	Dynamic Incentive Effect	278
4.	Conflicts of Objectives	279
5.	Emissions Trading and Specific Features of Climate Protection	280
6.	Conclusion	281

D.	Epilogue: The Vision of a U.S. Emissions Trading System	282
	Exercises	287
Part Six:	Natural Resources and Sustainable Development	290
A.	Resource Exhaustion – The End of Humankind?	290
	I. Introduction	290
	II. Social Optimum and Competitive Equilibrium in the Exploitation of Exhaustible Resources – The Hotelling Rule	292
	III. Climate Policy in Light of the Economics of Exhaustible Resources	300
B.	Renewable Resources	303
	I. Bioeconomic Foundations	303
	II. The Open Access Problem	304
C.	Sustainable Development	307
	I. Introduction	307
	II. Sustainability as Nondeclining Welfare	308
	III. Sustainability as Constant Capital	311
	1. Weak Sustainability	311
	2. Strong Sustainability	312
	3. Critical Sustainability	312
	IV. Sustainability Policy	313
	V. Incentive Problems of Sustainability	321
	Exercises	324
	Epilogue: Three Types of Externality and the Increasing Difficulty of Internalizing Them	326
	Solutions to Exercises	329
