

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Entropy and Information Communication . . . . .	2
1.2	Classical Computer Versus Quantum Computer . . . . .	4
1.2.1	Logical Irreversibility and Energy Loss . . . . .	4
1.2.2	Thermodynamic Interpretation of Irreversible Computation . . . . .	5
1.2.3	Information Theoretic Interpretation . . . . .	5
1.2.4	Resolution of Demerits (1), (2) by Quantum Computer . . . . .	5
1.3	What Are Quantum Gates and Computation? . . . . .	6
1.3.1	Gates . . . . .	6
1.3.2	Quantum Algorithm and Computation . . . . .	8
1.4	Locality and Entanglement . . . . .	9
1.5	What Are Quantum Cryptography and Teleportation? . . . . .	11
1.5.1	Cryptography . . . . .	11
1.5.2	Teleportation . . . . .	12
1.6	Nanosystems and Biosystems . . . . .	12
<b>2</b>	<b>Algorithms and Computation</b> . . . . .	15
2.1	General Algorithms . . . . .	15
2.2	Turing Machine . . . . .	17
2.2.1	Gödel Encoding . . . . .	19
2.2.2	The Halting Problem . . . . .	21
2.2.3	Universal Turing Machine . . . . .	21
2.2.4	Partially Recursive Functions . . . . .	21
2.3	Boolean Functions, Gates and Circuits . . . . .	23
2.3.1	Boolean Functions and Gates . . . . .	23
2.3.2	Circuits . . . . .	25
2.4	Computational Complexity, P-problem and NP-problem . . . . .	26
2.5	Notes . . . . .	28
<b>3</b>	<b>Basics of Classical Probability</b> . . . . .	29
3.1	Classical Probability . . . . .	29
3.1.1	Radon–Nikodym Theorem . . . . .	32

3.2	Conditional Expectation and Martingale . . . . .	33
3.3	Algebraic Formulation of Classical Probability . . . . .	34
3.4	Notes . . . . .	35
<b>4</b>	<b>Basics of Infinite-Dimensional Analysis . . . . .</b>	<b>37</b>
4.1	Hilbert Space . . . . .	37
4.2	Linear Operators in Hilbert Space . . . . .	39
4.2.1	Spaces $\mathbf{F}(\mathcal{H})$ , $\mathbf{C}(\mathcal{H})$ , $\mathbf{S}(\mathcal{H})$ , and $\mathbf{T}(\mathcal{H})$ . . . . .	41
4.3	Direct Sum and Tensor Product of Hilbert Spaces . . . . .	42
4.4	Fock Space . . . . .	44
4.4.1	Bosonic Fock Space . . . . .	44
4.4.2	Annihilation and Creation Operators . . . . .	45
4.4.3	Fermionic Fock Space . . . . .	46
4.4.4	Weyl Representation . . . . .	47
4.5	Hida White Noise Analysis . . . . .	48
4.5.1	White Noise . . . . .	48
4.5.2	Hida Distributions . . . . .	49
4.5.3	Lie Algebra of the Hida Rotation Group . . . . .	51
4.6	Elements of Operator Algebras . . . . .	52
4.7	KMS States and Tomita–Takesaki Theory . . . . .	56
4.8	Notes . . . . .	59
<b>5</b>	<b>Basics of Quantum Mechanics . . . . .</b>	<b>61</b>
5.1	Quantum Dynamics . . . . .	61
5.1.1	Schrödinger Picture . . . . .	62
5.1.2	Heisenberg Picture . . . . .	63
5.1.3	Free Particle . . . . .	63
5.1.4	Scattering . . . . .	65
5.1.5	Description of General State: Density Operator . . . . .	65
5.2	States and Observables . . . . .	67
5.2.1	Quantum Parallelism (Duality) . . . . .	67
5.2.2	States . . . . .	70
5.2.3	Observables . . . . .	70
5.2.4	Expectation Values . . . . .	71
5.3	Quantum Oscillator, Creation and Annihilation Operators . . . . .	72
5.4	Symmetries . . . . .	73
5.4.1	Representations of the Rotation Group: Spin . . . . .	74
5.5	Quantum Probability . . . . .	75
5.5.1	Conditional Probability and Joint Probability in QP . . . . .	77
5.5.2	Probability Positive Operator-Valued Measure (POVM) . . . . .	80
5.6	General Frameworks of Quantum Probability . . . . .	82
5.7	Uncertainty Relation . . . . .	82
5.8	Principle of Quantum Measurements . . . . .	83
5.8.1	Measurement Procedure . . . . .	84
5.8.2	Reduction of State . . . . .	85
5.9	Composite Systems and Operations . . . . .	88

5.9.1	Operations and Completely Positive Mappings . . . . .	89
5.9.2	Measurements as Unitary Transformations on Extended Space . . . . .	90
5.10	POVM and Instruments . . . . .	91
5.10.1	POVM . . . . .	91
5.10.2	Instrument . . . . .	92
5.10.3	Covariant POVM and Instrument . . . . .	94
5.11	Seven Principles of Quantum Mechanics . . . . .	95
5.12	Notes . . . . .	99
<b>6</b>	<b>Fundamentals of Classical Information Theory . . . . .</b>	<b>101</b>
6.1	Communication Processes and Channel . . . . .	101
6.2	Entropy . . . . .	103
6.3	Relative Entropy . . . . .	108
6.4	Mutual Entropy . . . . .	111
6.4.1	Discrete Case . . . . .	111
6.4.2	Continuous Case . . . . .	112
6.5	Entropy of Information Source . . . . .	114
6.6	Capacity . . . . .	116
6.7	McMillan's Theorem . . . . .	117
6.8	Shannon's Coding Theorem . . . . .	118
6.8.1	Channel, Transmission Rate and Capacity Rate . . . . .	119
6.8.2	Coding Theorem . . . . .	121
6.8.3	Interpretation of Coding Theorem . . . . .	122
6.9	Notes . . . . .	123
<b>7</b>	<b>Fundamentals of Quantum Information . . . . .</b>	<b>125</b>
7.1	Communication Processes . . . . .	126
7.2	Quantum Entropy for Density Operators . . . . .	127
7.3	Relative Entropy for Density Operators . . . . .	131
7.4	More About Channels . . . . .	136
7.4.1	von Neumann Entropy for the Qubit State . . . . .	142
7.5	Quantum Mutual Entropy . . . . .	143
7.5.1	Generalized (or Quasi) Quantum Mutual Entropy . . . . .	147
7.5.2	Ergodic Type Theorem . . . . .	148
7.6	Entropy Exchange and Coherent Information . . . . .	149
7.7	Comparison of Various Quantum Mutual Type Entropies . . . . .	150
7.8	Lifting and Beam Splitting . . . . .	152
7.9	Entropies for General Quantum States . . . . .	158
7.10	Sufficiency and Relative Entropy . . . . .	163
7.11	Notes . . . . .	165
<b>8</b>	<b>Locality and Entanglement . . . . .</b>	<b>167</b>
8.1	EPR Model and Bohm Model . . . . .	168
8.1.1	Various Localities . . . . .	168
8.1.2	Probability and Local Causality . . . . .	170

8.1.3	EPR Model vs. Bohm and Bell Model . . . . .	172
8.1.4	Bell's Locality . . . . .	173
8.1.5	Discussion of Bell's Locality . . . . .	174
8.1.6	Example of Local Realist Representation for Spins . . . . .	174
8.1.7	Local Realist Representation for EPR Correlations . . . . .	175
8.1.8	On Bell's Theorem . . . . .	178
8.2	Bell's Theorem . . . . .	181
8.2.1	Bell's Theorem and Stochastic Processes . . . . .	181
8.2.2	CHSH Inequality . . . . .	182
8.3	Various Local Realisms . . . . .	184
8.3.1	Bell's Local Realism . . . . .	184
8.3.2	Space and Time in Axioms of Quantum Mechanics . . . . .	185
8.3.3	Einstein's Local Realism . . . . .	185
8.3.4	Local Realistic Representation for Quantum Spin Correlations . . . . .	186
8.3.5	Correlation Functions and Local Realism . . . . .	186
8.4	Entangled States in Space–Time. Disentanglement . . . . .	188
8.5	Local Observations . . . . .	190
8.5.1	Modified Bell's Equation . . . . .	190
8.6	Separability and Entanglement . . . . .	193
8.6.1	Entangling Operator . . . . .	194
8.6.2	True Quantum Entanglement, d- and c-Entanglements . . . . .	198
8.6.3	Criteria of Entangled States . . . . .	203
8.6.4	Degrees of Entanglement . . . . .	209
8.6.5	Models of Entanglement in Circulant States . . . . .	215
8.6.6	Computation of DEN . . . . .	216
8.7	Entangled Markov Chains and Their Properties . . . . .	218
8.7.1	Entangled Quantum Markov Chains . . . . .	218
8.7.2	Entangled Markov Chains Generated by Unitary Implementable Matrices . . . . .	222
8.8	Notes . . . . .	225
<b>9</b>	<b>Quantum Capacity and Coding . . . . .</b>	<b>227</b>
9.1	Channel Capacity . . . . .	227
9.1.1	Capacity of Quantum Channel . . . . .	227
9.1.2	Capacity of Classical–Quantum–Classical Channel . . . . .	229
9.1.3	Bound of Mutual Entropy and Capacity . . . . .	229
9.2	Computation of Capacity . . . . .	233
9.2.1	Divergence Center . . . . .	235
9.2.2	Comparison of Capacities . . . . .	238
9.3	Quantum McMillan Type Theorem . . . . .	241
9.3.1	Entropy Operators in Quantum Systems . . . . .	241
9.3.2	McMillan's Type Convergence Theorems . . . . .	243
9.4	Coding Type Theorems . . . . .	246
9.5	Notes . . . . .	250

20.8.2	A Combined Quantum Baker’s Map and Its Entropic Chaos Degree	599
20.8.3	Dependence of the Entropic Chaos Degree on the Combination Parameter $a$	601
20.8.4	Dependence of the Entropic Chaos Degree on $N$	604
20.9	Notes	605
<b>21</b>	<b>Applications to Life Science</b>	607
21.1	Introduction	608

21.1.1	Quantum Theory and Molecular Biology . . . . .	608
21.1.2	On Quantum Mind and Brain . . . . .	609
21.1.3	Characteristics of Biological Systems . . . . .	610
21.2	Genome and Proteins . . . . .	612
21.2.1	Cell . . . . .	612
21.2.2	Biomolecules . . . . .	613
21.2.3	Nucleic Acids (DNA and RNA) . . . . .	614
21.2.4	Genetic Code . . . . .	615
21.2.5	Human Genome . . . . .	617
21.3	Sequence Alignment by Quantum Algorithm . . . . .	618
21.3.1	Outline of Alignment . . . . .	618
21.3.2	Quantum Algorithm of Multiple Alignment . . . . .	619
21.3.3	Computational Complexity of Quantum Algorithm . . . . .	625
21.4	A Brain Model Describing the Recognition Process . . . . .	625
21.4.1	A Quantum-Like Model of Brain . . . . .	626
21.4.2	Value of Information in Brain . . . . .	627
21.4.3	Postulates Concerning the Recognition of Signals . . . . .	628
21.4.4	The Space of Signals . . . . .	629
21.4.5	The Memory Space . . . . .	631
21.4.6	The Exchange Operator . . . . .	632
21.4.7	Processing of the Signals . . . . .	634
21.4.8	Recognition of Signals . . . . .	634
21.4.9	Measurements of the EEG-Type . . . . .	636
21.5	Evolution Tree and Study of the HIV and the Influenza A Viruses: As Applications of Information Dynamics . . . . .	636
21.5.1	Genetic Difference and Evolution Tree . . . . .	637
21.5.2	A Method Constructing Phylogenetic Trees . . . . .	638
21.5.3	Phylogenetic Tree for Hemoglobin $\alpha$ . . . . .	643
21.5.4	Evolution and Its Tree of HIV by EER . . . . .	645
21.5.5	Use of the Entropic Chaos Degree to Study Influenza A Viruses and HIV-1 . . . . .	647
21.5.6	Entropic Chaos Degree . . . . .	651
21.5.7	Evolution Analysis of Influenza A Viruses . . . . .	652
21.5.8	Evolution of the HIV-1 Viruses by ECD . . . . .	658
21.6	Code Structure of HIV-1 . . . . .	660
21.6.1	Coding Theory . . . . .	660
21.6.2	Application of Artificial Codes to Genome . . . . .	662
21.6.3	Code Structure of HIV-1 . . . . .	665
21.7	$p$ -adic Modeling of the Genome and the Genetic Code . . . . .	668
21.7.1	Genetic Code . . . . .	670
21.7.2	$p$ -adic Genome . . . . .	672
21.7.3	$p$ -adic Genetic Code . . . . .	678
21.7.4	Remarks . . . . .	685
21.8	Mathematical Model of Drug Delivery System . . . . .	687
21.8.1	Mathematical Model . . . . .	688

21.8.2	Results and Discussion . . . . .	693
21.9	An Application of Quantum Information to a Biosystem: Biomolecular Modeling . . . . .	697
21.9.1	Folding Problem . . . . .	697
21.9.2	Molecular Dynamics . . . . .	698
21.9.3	Molecular Dynamics for Harmonic Oscillator . . . . .	701
21.9.4	Examples of Molecular Dynamics Simulations . . . . .	703
21.9.5	Quantum Algorithm of Protein Folding . . . . .	704
21.10	Quantum Photosynthesis . . . . .	704
21.10.1	Photosystems . . . . .	705
21.10.2	Biophysics of Photosynthesis . . . . .	706
21.10.3	Quantum Mechanics in Photosynthesis . . . . .	707
21.10.4	Quantum Network Model . . . . .	709
21.10.5	Chaotic Amplifier and Decreasing of Entropy . . . . .	710
21.10.6	Channel Representation of Photosynthesis . . . . .	711
21.11	Quantum-Like Models for Cognitive Psychology . . . . .	712
21.11.1	Quantum-Like Model for Decision-Making in Two-Player Game . . . . .	712
21.11.2	Decision-Making Process in Player's Mind . . . . .	713
21.11.3	Definition of Velocities of $k$ and $\tilde{k}$ . . . . .	714
21.11.4	Decision-Making in PD-Type Game and Irrational Choice	717
21.11.5	Non-Kolmogorovian Structure . . . . .	718
