<i>Foreword</i>	<i>page</i>	ix
<i>Acknowledgements</i>		xiii
1 Introductory remarks		1
1.1 Early accounts and the birth of mathematical probability		1
1.2 Laplace and the classical definition of probability		3
1.3 Frequentism		8
1.4 Subjectivism, neo-Bayesianism and logicism		10
1.5 From definitions to interpretations		12
Further reading		13
References		13
2 Individual and statistical descriptions		15
2.1 Joint α -descriptions and s -descriptions		15
2.2 Frequency vector and individual descriptions		18
2.3 Partitions		19
2.4 Partial and marginal descriptions		20
2.5 Exercises		24
2.6 Summary		24
Further reading		25
3 Probability and events		26
3.1 Elementary descriptions and events		26
3.2 Decompositions of the sample space		29
3.3 Remarks on distributions		32
3.4 Probability assignments		35
3.5 Remarks on urn models and predictive probabilities		39
3.6 Appendix: outline of elementary probability theory		42
3.7 Exercises		54
3.8 Summary		55
Further reading		55
References		57

4	Finite random variables and stochastic processes	58
4.1	Finite random variables	58
4.2	Finite stochastic processes	73
4.3	Appendix 1: a finite version of de Finetti's theorem	86
4.4	Appendix 2: the beta distribution	92
4.5	Exercises	93
4.6	Summary	93
	Further reading	94
	References	95
5	The Pólya process	96
5.1	Definition of the Pólya process	96
5.2	The first moments of the Pólya distribution	100
5.3	Label mixing and marginal distributions	104
5.4	A consequence of the constraint $\sum n_i = n$	116
5.5	The continuum limits of the multivariate Pólya distribution	116
5.6	The fundamental representation theorem for the Pólya process	123
5.7	Exercises	130
5.8	Summary	131
	Further reading	132
6	Time evolution and finite Markov chains	134
6.1	From kinematics to Markovian probabilistic dynamics	134
6.2	The Ehrenfest urn model	139
6.3	Finite Markov chains	141
6.4	Convergence to a limiting distribution	146
6.5	The invariant distribution	152
6.6	Reversibility	160
6.7	Exercises	166
6.8	Summary	169
	Further reading	169
	References	171
7	The Ehrenfest–Brillouin model	172
7.1	Merging Ehrenfest-like destructions and Brillouin-like creations	172
7.2	Unary moves	174
7.3	From fleas to ants	177
7.4	More complicated moves	180
7.5	Pólya distribution structures	181
7.6	An application to stock price dynamics	188
7.7	Exogenous constraints and the most probable occupation vector	193

7.8	Exercises	201
7.9	Summary	201
	Further reading	202
8	Applications to stylized models in economics	204
8.1	A model for random coin exchange	204
8.2	The taxation–redistribution model	212
8.3	The Aoki–Yoshikawa model for sectoral productivity	217
8.4	General remarks on statistical equilibrium in economics	223
8.5	Exercises	225
8.6	Summary	225
	Further reading	226
	References	228
9	Finitary characterization of the Ewens sampling formula	229
9.1	Infinite number of categories	229
9.2	Finitary derivation of the Ewens sampling formula	232
9.3	Cluster number distribution	238
9.4	Ewens’ moments and site-label marginals	240
9.5	Alternative derivation of the expected number of clusters	243
9.6	Sampling and accommodation	244
9.7	Markov chains for cluster and site dynamics	247
9.8	Marginal cluster dynamics and site dynamics	250
9.9	The two-parameter Ewens process	256
9.10	Summary	259
	Further reading	260
10	The Zipf–Simon–Yule process	262
10.1	The Ewens sampling formula and firm sizes	262
10.2	Hoppe’s vs. Zipf’s urn	263
10.3	Expected cluster size dynamics and the Yule distribution	265
10.4	Birth and death Simon–Zipf’s process	269
10.5	Marginal description of the Simon–Zipf process	271
10.6	A formal reversible birth-and-death marginal chain	274
10.7	Monte Carlo simulations	276
10.8	Continuous limit and diffusions	279
10.9	Appendix 1: invariant measure for homogeneous diffusions	286
10.10	Summary	287
	Further reading	288
	Appendix	289
	Solutions to exercises	289
