Preface to the Third Edition ix

Preface to the Second Edition xi

Preface to the First Edition xiii

List of Symbols xvii

Chapter 1: Logic 1
1.1 Propositions and Truth Values 1
1.2 Logical Connectives and Truth Tables 2
1.3 Tautologies and Contradictions 13
1.4 Logical Equivalence and Logical Implication 15
1.5 The Algebra of Propositions 22
1.6 Arguments 26
1.7 Formal Proof of the Validity of Arguments 29
1.8 Predicate Logic 35
1.9 Arguments in Predicate Logic 45

Chapter 2: Mathematical Proof 50
2.1 The Nature of Proof 50
2.2 Axioms and Axiom Systems 51
2.3 Methods of Proof 55
2.4 Mathematical Induction 69

Chapter 3: Sets 79
3.1 Sets and Membership 79
3.2 Subsets 85

Garnier, Rowan
Discrete mathematics
2009

digitalisiert durch:
IDS Basel Bern

3.3 Operations on Sets 91
3.4 Counting Techniques 100
3.5 The Algebra of Sets 104
3.6 Families of Sets 111
3.7 The Cartesian Product 122
3.8 Types and Typed Set Theory 134

Chapter 4: Relations **154**
4.1 Relations and Their Representations 154
4.2 Properties of Relations 164
4.3 Intersections and Unions of Relations 171
4.4 Equivalence Relations and Partitions 175
4.5 Order Relations 188
4.6 Hasse Diagrams 198
4.7 Application: Relational Databases 205

Chapter 5: Functions **220**
5.1 Definitions and Examples 220
5.2 Composite Functions 238
5.3 Injections and Surjections 246
5.4 Bijections and Inverse Functions 260
5.5 More on Cardinality 270
5.6 Databases: Functional Dependence and Normal Forms 277

Chapter 6: Matrix Algebra **291**
6.1 Introduction 291
6.2 Some Special Matrices 294
6.3 Operations on Matrices 296
6.4 Elementary Matrices 308
6.5 The Inverse of a Matrix 318

Chapter 7: Systems of Linear Equations **331**
7.1 Introduction 331
7.2 Matrix Inverse Method 337
7.3 Gauss–Jordan Elimination 342
7.4 Gaussian Elimination 355

Chapter 8: Algebraic Structures **361**
8.1 Binary Operations and Their Properties 361
8.2 Algebraic Structures 370
8.3 More about Groups 379
8.4 Some Families of Groups 384
8.5 Substructures 396
8.6 Morphisms 404
8.7 Group Codes 418

Chapter 9: Introduction to Number Theory **436**
9.1 Divisibility 437
9.2 Prime Numbers 449
9.3 Linear Congruences 460
9.4 Groups in Modular Arithmetic 473
9.5 Public Key Cryptography 479

Chapter 10: Boolean Algebra **492**
10.1 Introduction 492
10.2 Properties of Boolean Algebras 496
10.3 Boolean Functions 503
10.4 Switching Circuits 520
10.5 Logic Networks 529
10.6 Minimization of Boolean Expressions 536

Chapter 11: Graph Theory **548**
11.1 Definitions and Examples 548
11.2 Paths and Cycles 561
11.3 Isomorphism of Graphs 575
11.4 Trees 582
11.5 Planar Graphs 591
11.6 Directed Graphs 600

Chapter 12: Applications of Graph Theory **611**
12.1 Introduction 611
12.2 Rooted Trees 612
12.3 Sorting 626
12.4 Searching Strategies 643
12.5 Weighted Graphs 652
12.6 The Shortest Path and Travelling Salesman Problems 660
12.7 Networks and Flows 673

References and Further Reading **687**

Hints and Solutions to Selected Exercises **692**

Index **798**
