**Preface** xv

## **CHAPTER 1 Introduction 1**

- 1.1.1 Variables: quantitative and qualitative 1
- 1.1.2 Levels of measurement: scale, ordinal and nominal data 1
- 1.1.3 A grey area: ratings 2
- 1.1.4 Univariate, bivariate and multivariate data sets 2
  
- 1.2.1 A simple experiment 3
- 1.2.2 A more complex experiment 4
- 1.2.3 Correlational research 5
- 1.2.4 The Pearson correlation coefficient 7
- 1.2.5 Correlation and causation 8
- 1.2.6 Quasi-experiments 8
  
- 1.3.1 Considerations in choosing a statistical test 9
- 1.3.2 Five common research situations 9
  
- 1.4.1 The design of the experiment: independent versus related samples 10
- 1.4.2 Flow chart for selecting a suitable test for differences between means 11
  
- 1.5.1 Flow chart for selecting a suitable test for association 13
- 1.5.2 Measuring association in ordinal data 14
- 1.5.3 Measuring association in nominal data: Contingency tables 14
- 1.5.4 Multi-way contingency tables 15
  
- 1.6.1 Flow chart for predicting a score or category membership 15
- 1.6.2 Simple regression 16
- 1.6.3 Multiple regression 16
- 1.6.4 Predicting category membership: Discriminant analysis and logistic regression 17
  
- 1.7.1 Flow chart for selecting the appropriate one-sample test 17
- 1.7.2 Goodness-of-fit: nominal data 18
- 1.7.3 Inferences about the mean of a single population 18

Recommended reading 20

## CHAPTER 2 Getting started with IBM SPSS Statistics 18 21

- 2.1.1 Entering the data 21
- 2.1.2 Selecting the exploratory and statistical procedures 22
- 2.1.3 Examining the output 22
- 2.1.4 A simple experiment 22
- 2.1.5 Preparing data for SPSS 23
- 2.2 OPENING SPSS 24
- 2.3 THE SPSS STATISTICS DATA EDITOR 27
  - 2.3.1 Working in Variable View 25
  - 2.3.2 Working in Data View 30
  - 2.3.3 Entering the data 31
- 2.4 A STATISTICAL ANALYSIS 34
  - 2.4.1 An example: Computing the group means 34
  - 2.4.2 Keeping more than one application open 38
- 2.5 CLOSING SPSS 39
- 2.6 RESUMING WORK ON A SAVED DATA SET 39
- Exercise 1 Some simple operations with SPSS Statistics 18 39
- Exercise 2 Questionnaire data 39

## CHAPTER 3 Editing data sets 40

- 3.1.1 Working in Variable View 40
- 3.1.2 Working in Data View 47
- 3.2.1 Editing the output 55
- 3.2.2 More advanced editing 57
- 3.2.3 Tutorials in SPSS 61
- 3.3.1 Selecting cases 61
- 3.3.2 Aggregating data 64
- 3.3.3 Sorting data 66
- 3.3.4 Merging files 67
- 3.3.5 Transposing the rows and columns of a data set 72
- 3.4.1 Importing data from other applications 74
- 3.4.2 Copying output 76
- 3.5.1 Printing output from the Viewer 78
- 3.5.2 Printing from the Data Editor 82
- 3.5.3 Transferring data from the Viewer for printing 82
- Exercise 3 Merging files – Adding cases & variables 84

## CHAPTER 4 Describing and exploring your data 85

- 4.2.1 Describing nominal data relating to one attribute 87
  - 4.2.2 Obtaining contingency tables 90
  
  - 4.3.1 Histograms of the distributions of height and weight for the males and females 95
  - 4.3.2 Obtaining scatterplots of weight against height 97
  - 4.3.3 Obtaining the statistics of the height distributions of males and females 99
  
  - 4.4.1 Stem-and-leaf displays 102
  - 4.4.2 Boxplots 103
  - 4.4.3 Exploring a small data set 104
  - 4.4.4 Some of the statistical output from Explore 105
  
  - 4.5.1 Data for the Multiple Response procedure 108
  - 4.5.2 Creating a multiple response set 110
  - 4.5.3 Obtaining the crosstabulations 112
  - 4.5.4 Finding the frequencies of specific transport profiles 116
  
  - 4.6.1 Reducing and transforming data 120
  - 4.6.2 The COMPUTE VARIABLE procedure 120
  - 4.6.3 The RECODE procedure 127
- Exercise 4 Correcting and preparing your data 131
- Exercise 5 Preparing your data (continued) 131

## CHAPTER 5 Graphs and charts 132

- 5.1.1 Graphs and charts on SPSS 132
- 5.1.2 Viewing a chart 134
- 5.1.3 Editing charts and saving templates 135
  
- 5.2.1 Simple bar charts 135
- 5.2.2 Clustered bar charts 139
- 5.2.3 Panelled bar charts 141
- 5.2.4 3-D charts 142
- 5.2.5 Editing a bar chart 144
- 5.2.6 Chart templates 145
  
  
- 5.6.1 The Visual Binning procedure 154
- 5.6.2 Plotting line graphs 157

- 5.7.1 Scatterplots 159
- 5.7.2 Dot plots 161

- 5.10.1 The SPSS ROC curve 168
- 5.10.2 The  $d'$  statistic 171

Exercise 6 Charts and graphs 172

Exercise 7 Recoding data; selecting cases; line graph 172

## **CHAPTER 6 Comparing averages: Two-sample and one-sample tests 173**

- 6.2.1 Preparing the data file 174
- 6.2.2 Exploring the data 175
- 6.2.3 Running the  $t$  test 177
- 6.2.4 Interpreting the output 179
- 6.2.5 Two-tailed and one-tailed  $p$ -values 180
- 6.2.6 The effects of extreme scores and outliers in a small data set 181
- 6.2.7 Measuring effect size 181
- 6.2.8 Reporting the results of a statistical test 183
  
- 6.3.1 Preparing the data file 185
- 6.3.2 Exploring the data 185
- 6.3.3 Running the  $t$  test 186
- 6.3.4 Interpreting the output 187
- 6.3.5 Measuring effect size 188
- 6.3.6 Reporting the results of the test 188
- 6.3.7 A one-sample test 189
  
- 6.4.1 Nonparametric tests in SPSS 189
- 6.4.2 Independent samples: The Mann-Whitney  $U$  test 190
- 6.4.3 Output for the Mann-Whitney  $U$  test 192
- 6.4.4 Effect size 194
- 6.4.5 The report 195
  
- 6.5.1 The Wilcoxon matched-pairs tests in SPSS 195
- 6.5.2 The output 196
- 6.5.3 Effect size 197
- 6.5.4 The report 197
  
- 6.6.1 The sign test in SPSS 199
- 6.6.2 Bernoulli trials: the binomial test 201
  
- 6.7.1 How many participants shall I need in my experiment? 207

- Exercise 8 Comparing the averages of two independent samples of data 208  
Exercise 9 Comparing the averages of two related samples of data 208  
Exercise 10 One-sample tests 208

## **CHAPTER 7 The one-way ANOVA 209**

- 7.1.1 A more complex drug experiment 209  
7.1.2 ANOVA models 210  
7.1.3 The one-way ANOVA 210
- 7.2.1 Entering the data 217  
7.2.2 Running the one-way ANOVA 220  
7.2.3 The output 220  
7.2.4 Effect size 221  
7.2.5 Report of the primary analysis 224  
7.2.6 The two-group case: equivalence of  $F$  and  $t$  223
- 7.3.1 Factors with fixed and random effects 225  
7.3.2 The analysis of covariance (ANCOVA) 226  
7.3.3 Univariate versus multivariate statistical tests 226  
7.3.4 The one-way ANOVA with GLM 226  
7.3.5 The GLM output 227  
7.3.6 Requesting additional items 229  
7.3.7 Additional output from GLM 231
- 7.4.1 Planned and unplanned comparisons 234  
7.4.2 Linear contrasts 238
- 7.5.1 Polynomials 249
- 7.6.1 How many participants shall I need? Using G\*Power 3 251
- 7.7.1 The Kruskal-Wallis k-sample test 253  
7.7.2 Dichotomous nominal data: the chi-square test 260

### **Recommended reading 261**

- Exercise 11 One-factor between subjects ANOVA 261  
Appendix 7.4.2.6 Partition of the between groups sum of squares into the sums of squares of the contrasts in an orthogonal set 261  
Appendix 7.5.1 An illustration of trend analysis 262

## **CHAPTER 8 Between subjects factorial experiments 267**

- 8.1.1 An experiment with two treatment factors 267  
8.1.2 Main effects and interactions 269

- 8.1.3 Profile plots 269
- 8.2.1 The two-way ANOVA 271
- 8.2.2 Degrees of freedom 272
- 8.2.3 The two-way ANOVA summary table 273
- 8.3.1 Entering the data into the Data Editor 275
- 8.3.2 Exploring the data: boxplots 276
- 8.3.3 Choosing a factorial ANOVA 277
- 8.3.4 Output for a factorial ANOVA 278
- 8.3.5 Measuring effect size in the two-way ANOVA 280
- 8.3.6 Reporting the results of the two-way ANOVA 283
- 8.4.1 The danger with multiple comparisons 284
- 8.4.2 Unpacking significant main effects: post hoc tests 284
- 8.4.3 The analysis of interactions 285
- 8.5.1 The Syntax Editor 287
- 8.5.2 Building syntax files automatically 288
- 8.5.3 Using the MANOVA command to run the univariate ANOVA 288
- 8.7.1 Three-way interactions 297
- 8.7.2 The three-way ANOVA 298
- 8.7.3 How the three-way ANOVA works 299
- 8.7.4 Measures of effect size in the three-way ANOVA 301
- 8.7.5 How many participants shall I need? 301
- 8.7.6 The three-way ANOVA with SPSS 301
- 8.7.7 Follow-up analysis following a significant three-way interaction 304
- 8.7.8 Using SPSS syntax to test for simple interactions and simple, simple main effects 305
- 8.7.9 Unplanned multiple comparisons following a significant three-way interaction 308

Recommended reading 311

Exercise 12 Between subjects factorial ANOVA (two-way ANOVA) 311

## **CHAPTER 9 Within subjects experiments 312**

- 9.1.1 Rationale of a within subjects experiment 312
- 9.1.2 How the within subjects ANOVA works 313
- 9.1.3 A within subjects experiment on the effect of target shape on shooting accuracy 316
- 9.1.4 Order effects: counterbalancing 317
- 9.1.5 Assumptions underlying the within subjects ANOVA: homogeneity of covariance 317

**CHAPTER 11 Measuring statistical association 395****11.**

- 11.1.1 A correlational study 396
- 11.1.2 Linear relationships 397
- 11.1.3 Error in measurement 397
  
- 11.2.1 Formula for the Pearson correlation 398
- 11.2.2 The range of values of the Pearson correlation 399
- 11.2.3 The sign of a correlation 399
- 11.2.4 Testing an obtained value of  $r$  for significance 400
- 11.2.5 A word of warning about the correlation coefficient 401
- 11.2.6 Effect size 401
  
- 11.3.1 Preparing the SPSS data set 403
- 11.3.2 Obtaining the scatterplot 403
- 11.3.3 Obtaining the Pearson correlation 404
- 11.3.4 Output for the Pearson correlation 405
  
- 11.4.1 Spearman's rank correlation 406
- 11.4.2 Kendall's tau statistics 407
- 11.4.3 Rank correlations with SPSS 407
  
- 11.5.1 The approximate chi-square goodness-of-fit test with three or more categories 409
- 11.5.2 Running a chi-square goodness-of-fit test on SPSS 410
- 11.5.3 Measuring effect size following a chi-square test of goodness-of-fit 413
- 11.5.4 Testing for association between two qualitative variables in a contingency table 415
- 11.5.5 Analysis of contingency tables with SPSS 420
- 11.5.6 Getting help with the output 425
- 11.5.7 Some cautions and caveats 426
- 11.5.8 Other problems with traditional chi-square analyses 431
  
- 11.7.1 Correlation does not imply causation 434
- 11.7.2 Meaning of partial correlation 436
  
- 11.8.1 Reliability and number of items: coefficient alpha 440
- 11.8.2 Measuring agreement among judges: the intraclass correlation 441
- 11.8.3 Reliability analysis with SPSS 442

**Recommended reading 445**

- Exercise 17 The Pearson correlation 445
- Exercise 18 Other measures of association 445
- Exercise 19 The analysis of nominal data 445

**CHAPTER 12 Regression 446**

- 12.1.1 Simple, two-variable regression 446
- 12.1.2 Residuals 448
- 12.1.3 The least squares criterion for 'the best-fitting line' 449
- 12.1.4 Regression and correlation 450
- 12.1.5 The coefficient of determination revisited 451
- 12.1.6 Shrinkage with resampling 454
- 12.1.7 Beta-weights 454
- 12.1.8 Effects of linear transformations on the correlation and regression Coefficients 455
- 12.1.9 Significance testing in simple regression 455
  
- 12.2.1 Drawing scatterplots with regression lines 456
- 12.2.2 A problem in simple regression 459
- 12.2.3 Procedure for simple regression 459
- 12.2.4 Output for simple regression 462
  
- 12.3.1 The multiple correlation coefficient  $R$  468
- 12.3.2 Significance testing in multiple regression 469
- 12.3.3 Partial and semipartial correlation 469
  
- 12.4.1 Simultaneous multiple regression 476
- 12.4.2 Stepwise multiple regression 480
  
  
- 12.6.1 A path diagram 484
- 12.6.2 Path analysis with AMOS 487
- 12.6.3 A brief look at a saturated model 502

Recommended reading 506

Exercise 20 Simple, two-variable regression 507

Exercise 21 Multiple regression 507

**CHAPTER 13 Analyses of multiway frequency tables 508**

- 13.2.1 Loglinear models and ANOVA models 509
- 13.2.2 Model-building and the hierarchical principle 511
- 13.2.3 The main-effects-only loglinear model and the traditional chi-square test for association 513
- 13.2.4 Analysis of the residuals 514
  
- 13.3.1 SPSS procedures for loglinear analysis 515
- 13.3.2 Fitting an unsaturated model 521
- 13.3.3 Summary 525

- 13.4.1 Exploring the data 526
- 13.4.2 Loglinear analysis of the data on gender and helpfulness 527
- 13.4.3 The main-effects-only model and the traditional chi-square test 531
- 13.4.4 Collapsing a multi-way table: the requirement of conditional independence 533
- 13.4.5 An alternative data set for the gender and helpfulness experiment 535
- 13.4.6 Reporting the results of a loglinear analysis 538

Recommended reading 539

Exercise 22 Loglinear analysis 539

## CHAPTER 14 Discriminant analysis and logistic regression 540

- 14.1.1 Discriminant analysis 541
- 14.1.2 Types of discriminant analysis 542
- 14.1.3 Stepwise discriminant analysis 542
- 14.1.4 Assumptions of discriminant analysis 543
- 14.2.1 Accessing the data 544
- 14.2.2 Exploring the data 544
- 14.2.3 Running discriminant analysis 545
- 14.2.4 Output for discriminant analysis 547
- 14.2.5 Predicting group membership 555
- 14.3.1 Logistic regression 557
- 14.3.2 How logistic regression works 559
- 14.3.3 An example of a binary logistic regression with quantitative independent variables 562
- 14.3.4 Binary logistic regression with categorical independent variables 570
- 14.4.1 Running multinomial logistic regression 575

Recommended reading 579

Exercise 23 Predicting category membership: Discriminant analysis and binary logistic regression 579

## CHAPTER 15 The search for latent variables: factor analysis 580

- 15.1.1 Stages in an exploratory factor analysis 582
- 15.1.2 The extraction of factors 583
- 15.1.3 The rationale of rotation 583
- 15.1.4 Some issues in factor analysis 583
- 15.1.5 Some key technical terms 584
- 15.1.6 Preliminaries 585

- 15.2.1 Entering the data for a factor analysis 586
- 15.2.2 Running a factor analysis on SPSS 586
- 15.2.3 Output for factor analysis 589
  
- 15.3.1 Running a factor analysis with syntax 598
- 15.3.2 Using a correlation matrix as input for factor analysis 599
- 15.3.3 Progressing with SPSS syntax 603
  
- 15.4.1 Input path diagram for a confirmatory factor analysis 605
- 15.4.2 Drawing the input path diagram for the researcher's two-factor model 607
- 15.4.3 Running the analysis 610
- 15.4.4 Result of the chi-square goodness-of-fit test and the output path diagram 611
- 15.4.5 Text output from a confirmatory factor analysis 613
- 15.4.6 Structural equation modelling 616

Recommended reading 617

Exercise 24 Factor analysis 617
