Contents

Introduction 1

PART I INTRODUCTION TO BANACH SPACES

1. Preliminaries 7
Remarks on set theory 8
Metric spaces and analytic topology 16
Complex analysis 30

2. Elements of normed spaces 33
Definitions and basic examples 33
Weierstrass approximation theorems 60
Inner-product spaces 70
Elementary ideas on Fourier series 84
Fourier integrals and Hermite functions 98

3. Banach spaces 106
Existence of continuous linear functionals 106
Separation theorems 122
Category theorems 128
Dual operators 140

PART II INTRODUCTION TO BANACH ALGEBRAS

4. Banach algebras 155
Elementary theory 155
Commutative Banach algebras 185
Runge's theorem and the holomorphic functional calculus 211

5. Representation theory 226
Representations and modules 226
Automatic continuity 241
Variation of the spectral radius 248

6. Algebras with an involution 260
Banach algebras with an involution 260
C^*-algebras 269

7. The Borel functional calculus 285
The Daniell integral 285
The Borel functional calculus and the spectral theorem 294

Allan, Graham R.
Introduction to Banach spaces and algebras
2011

PART III SEVERAL COMPLEX VARIABLES AND BANACH ALGEBRAS

8. Introduction to several complex variables **305**
Differentiable functions in the plane 305
Functions of several variables 313
Polynomial convexity 326

9. The holomorphic functional calculus in several variables **339**
The main theorem 339
Applications of the functional calculus 345
