# Detailed Contents

Foreword by Shimon Ullman xvii

Preface xxiii

**PART I**  
**INTRODUCTION AND**  
**PHILOSOPHICAL PRELIMINARIES**

**GENERAL INTRODUCTION 3**

**Chapter 1**

---

**The Philosophy and the Approach 8**

Background 8

Understanding Complex Information-Processing Systems 19

Representation and description 20

Process 22

The three levels 24

Importance of computational theory 27

The approach of J. J. Gibson 29

A Representational Framework for Vision 31

The purpose of vision 32

Advanced vision 34

To the desirable via the possible 36

**PART II**  
**VISION**

**Chapter 2**

---

**Representing the Image 41**

|  |    |
|--|----|
| Physical Background of Early Vision  | 41 |
| Representing the image   | 44 |
| Underlying physical assumptions  | 44 |
| Existence of surfaces  | 44 |
| Hierarchical organization  | 44 |
| Similarity   | 47 |
| Spatial continuity   | 49 |
| Continuity of discontinuities  | 49 |
| Continuity of flow   | 50 |
| General nature of the representation                                       | 51 |
| Zero-Crossings and the Raw Primal Sketch                                   | 54 |
| Zero-Crossings   | 54 |
| Biological implications  | 61 |
| The psychophysics of early vision  | 61 |
| The physiological realization of the $\nabla^2 G$ filters                  | 64 |
| The physiological detection of zero crossings                              | 64 |
| The first complete symbolic representation of the image                    | 67 |
| The raw primal sketch  | 68 |
| Philosophical aside  | 75 |
| Spatial Arrangement of an Image  | 79 |
| Light Sources and Transparency   | 86 |
| Other light source effects   | 88 |
| Transparency   | 89 |
| Conclusions  | 90 |
| Grouping Processes and the Full Primal Sketch                              | 91 |
| Main points in the argument  | 96 |
| The computational approach and the psychophysics of texture discrimination | 96 |

---

**Chapter 3**

**From Images to Surfaces 99**

|   |     |
|---|-----|
| Modular Organization of the Human Visual Processor                    | 99  |
| Processes, Constraints, and the Available Representations of an Image | 103 |
| Stereopsis  | 111 |
| Measuring stereo disparity  | 111 |
| Computational theory  | 111 |

- 
- Algorithms for stereo matching 116
    - A cooperative algorithm* 116
    - Cooperative algorithms and the stereo matching problem* 122
    - Biological evidence* 125
    - A second algorithm* 127
    - Uniqueness, cooperativity, and the pulling effect* 140
    - Panum's fusional area* 144
    - Impressions of depth from larger disparities* 144
    - Have we solved the right problem?* 148
    - Vergence movements and the 2½-D sketch* 149
  - Neural implementation of stereo fusion 152
  - Computing distance and surface orientation from disparity 155
    - Computational theory 155
      - Distance from the viewer to the surface* 155
      - Surface orientation from disparity change* 156
    - Algorithm and implementation 159
  - Directional Selectivity 159
    - Introduction to visual motion 159
      - Computational theory 165
      - An algorithm 167
      - Neural implementation 169
    - Using directional selectivity to separate independently moving surfaces 175
      - Computational theory 175
      - Algorithm and implementation 177
  - Looming 182
  - Apparent Motion 182
    - Why apparent motion? 183
    - The two halves of the problem 184
    - The correspondence problem 188
      - Empirical findings 188
        - What is the input representation?* 188
        - Two dimensionality of the correspondence process* 193
      - Ullman's theory of the correspondence process 196
      - A critique of Ullman's theory 199
      - A new look at the correspondence problem 202
        - One problem or two?* 202
        - Separate systems for structure and object constancy* 204
  - Structure from Motion 205
    - The problem 205
      - A previous approach 207
      - The rigidity constraint 209
      - The rigidity assumption 210
      - A note about the perspective projection 211

|  |     |
|--|-----|
| Optical flow   | 212 |
| The input representation   | 212 |
| Mathematical results   | 213 |
| Shape Contours   | 215 |
| Some examples  | 216 |
| Occluding contours   | 218 |
| Constraining assumptions   | 219 |
| Implications of the assumptions  | 222 |
| Surface orientation discontinuities                                    | 225 |
| Surface contours   | 226 |
| The puzzle and difficulty of surface contours                          | 228 |
| Determining the shape of the contour generator                         | 229 |
| The effects of more than one contour                                   | 230 |
| Surface Texture  | 233 |
| The isolation of texture elements                                      | 234 |
| Surface parameters   | 234 |
| Possible measurements  | 234 |
| Estimating scaled distance directly                                    | 238 |
| Summary  | 239 |
| Shading and Photometric Stereo   | 239 |
| Gradient space   | 240 |
| Surface illumination, surface reflectance, and image intensity         | 243 |
| The reflectance map  | 245 |
| Recovery of shape from shading   | 248 |
| Photometric stereo   | 249 |
| Brightness, Lightness, and Color                                       | 250 |
| The Helson–Judd approach   | 252 |
| Retinex theory of lightness and color                                  | 253 |
| Algorithms   | 255 |
| Extension to color vision  | 256 |
| Comments on the retinex theory   | 257 |
| Some physical reasons for the importance of simultaneous contrast      | 259 |
| Hypothesis of the superficial origin of nonlinear changes in intensity | 26  |
| Implications for measurements on a trichromatic image                  | 262 |
| Summary of the approach  | 264 |
| Summary  | 264 |

---

## Chapter 4

### The Immediate Representation of Visible Surfaces 268

|                    |     |
|--------------------|-----|
| Introduction       | 268 |
| Image Segmentation | 270 |

---

|  |     |
|--|-----|
| Reformulating the Problem                          | 272 |
| The Information to be Represented                  | 275 |
| General Form of the 2½-D Sketch                    | 277 |
| Possible Forms for the Representation              | 279 |
| Possible Coordinate Systems                        | 283 |
| Interpolation, Continuation, and Discontinuities   | 285 |
| Computational Aspects of the Interpolation Problem | 288 |
| Discontinuities                                    | 289 |
| Interpolation methods                              | 290 |
| Other Internal Computations                        | 291 |

## Chapter 5

---

### Representing Shapes for Recognition 295

---

|  |     |
|--|-----|
| Introduction   | 295 |
| Issues Raised by the Representation of Shape                     | 296 |
| Criteria for judging the effectiveness of a shape representation | 296 |
| Accessibility  | 297 |
| Scope and uniqueness   | 297 |
| Stability and sensitivity  | 298 |
| Choices in the design of a shape representation                  | 298 |
| Coordinate systems   | 298 |
| Primitives   | 300 |
| Organization   | 302 |
| The 3-D Model Representation                                     | 302 |
| Natural coordinate systems                                       | 303 |
| Axis-based descriptions  | 304 |
| Modular organization of the 3-D model representation             | 305 |
| Coordinate system of the 3-D model                               | 307 |
| Natural Extensions   | 309 |
| Deriving and Using the 3-D Model Representation                  | 313 |
| Deriving a 3-D model description                                 | 313 |
| Relating viewer-centered to object-centered coordinates          | 317 |
| Indexing and the catalogue of 3-D models                         | 318 |
| Interaction between derivation and recognition                   | 321 |
| Finding the correspondence between image and catalogued model    | 322 |
| Constraint analysis  | 322 |
| Psychological Considerations                                     | 325 |
