# Contents

| | | | |
|---|---|---|---|
| | *List of contributors* | | *page* ix |
| | *Preface* | | xi |
| **1** | **Introduction** | | 1 |
| | 1.1 | Information theory versus coding theory | 1 |
| | 1.2 | Model and basic operations of information processing systems | 2 |
| | 1.3 | Information source | 4 |
| | 1.4 | Encoding a source alphabet | 5 |
| | 1.5 | Octal and hexadecimal codes | 8 |
| | 1.6 | Outline of the book | 9 |
| | | *References* | 11 |
| **2** | **Error-detecting codes** | | 13 |
| | 2.1 | Review of modular arithmetic | 13 |
| | 2.2 | Independent errors – white noise | 15 |
| | 2.3 | Single parity-check code | 17 |
| | 2.4 | The ASCII code | 19 |
| | 2.5 | Simple burst error-detecting code | 21 |
| | 2.6 | Alphabet plus number codes – weighted codes | 22 |
| | 2.7 | Trade-off between redundancy and error-detecting capability | 27 |
| | 2.8 | Further reading | 30 |
| | | *References* | 30 |
| **3** | **Repetition and Hamming codes** | | 31 |
| | 3.1 | Arithmetics in the binary field | 33 |
| | 3.2 | Three-times repetition code | 34 |

Moser, Stefan M.
A student's guide to coding and information theory
2012

digitalisiert durch:
IDS Basel Bern

3.3 Hamming code 40
3.3.1 Some historical background 40
3.3.2 Encoding and error correction of the (7,4) Hamming code 42
3.3.3 Hamming bound: sphere packing 48
3.4 Further reading 52
*References* 53

**4 Data compression: efficient coding of a random message** 55
4.1 A motivating example 55
4.2 Prefix-free or instantaneous codes 57
4.3 Trees and codes 58
4.4 The Kraft Inequality 62
4.5 Trees with probabilities 65
4.6 Optimal codes: Huffman code 66
4.7 Types of codes 73
4.8 Some historical background 78
4.9 Further reading 78
*References* 79

**5 Entropy and Shannon's Source Coding Theorem** 81
5.1 Motivation 81
5.2 Uncertainty or entropy 86
5.2.1 Definition 86
5.2.2 Binary entropy function 88
5.2.3 The Information Theory Inequality 89
5.2.4 Bounds on the entropy 90
5.3 Trees revisited 92
5.4 Bounds on the efficiency of codes 95
5.4.1 What we cannot do: fundamental limitations of source coding 95
5.4.2 What we can do: analysis of the best codes 97
5.4.3 Coding Theorem for a Single Random Message 101
5.5 Coding of an information source 103
5.6 Some historical background 108
5.7 Further reading 110
5.8 Appendix: Uniqueness of the definition of entropy 111
*References* 112

**6 Mutual information and channel capacity** 115
6.1 Introduction 115
6.2 The channel 116
6.3 The channel relationships 118
6.4 The binary symmetric channel 119
6.5 System entropies 122
6.6 Mutual information 126
6.7 Definition of channel capacity 130
6.8 Capacity of the binary symmetric channel 131
6.9 Uniformly dispersive channel 134
6.10 Characterization of the capacity-achieving input distribution 136
6.11 Shannon's Channel Coding Theorem 138
6.12 Some historical background 140
6.13 Further reading 141
*References* 141

**7 Approaching the Shannon limit by turbo coding** 143
7.1 Information Transmission Theorem 143
7.2 The Gaussian channel 145
7.3 Transmission at a rate below capacity 146
7.4 Transmission at a rate above capacity 147
7.5 Turbo coding: an introduction 155
7.6 Further reading 159
7.7 Appendix: Why we assume uniform and independent data at the encoder 160
7.8 Appendix: Definition of concavity 164
*References* 165

**8 Other aspects of coding theory** 167
8.1 Hamming code and projective geometry 167
8.2 Coding and game theory 175
8.3 Further reading 180
