

Table of Contents

Chapter 1	Computer Networks and the Internet	27
1.1	What Is the Internet?	28
1.1.1	A Nuts-and-Bolts Description	28
1.1.2	A Services Description	31
1.1.3	What Is a Protocol?	33
1.2	The Network Edge	35
1.2.1	Access Networks	38
1.2.2	Physical Media	44
1.3	The Network Core	48
1.3.1	Packet Switching	48
1.3.2	Circuit Switching	53
1.3.3	A Network of Networks	58
1.4	Delay, Loss, and Throughput in Packet-Switched Networks	61
1.4.1	Overview of Delay in Packet-Switched Networks	61
1.4.2	Queuing Delay and Packet Loss	65
1.4.3	End-to-End Delay	68
1.4.4	Throughput in Computer Networks	70
1.5	Protocol Layers and Their Service Models	73
1.5.1	Layered Architecture	73
1.5.2	Encapsulation	79
1.6	Networks Under Attack	81
1.7	History of Computer Networking and the Internet	86
1.7.1	The Development of Packet Switching: 1961–1972	86
1.7.2	Proprietary Networks and Internetworking: 1972–1980	88
1.7.3	A Proliferation of Networks: 1980–1990	89
1.7.4	The Internet Explosion: The 1990s	90
1.7.5	The New Millennium	91
1.8	Summary	92
	Homework Problems and Questions	94
	Wireshark Lab	104
	Interview: Leonard Kleinrock	106

Chapter 2	Application Layer	109
2.1	Principles of Network Applications	110
2.1.1	Network Application Architectures	112
2.1.2	Processes Communicating	114
2.1.3	Transport Services Available to Applications	117
2.1.4	Transport Services Provided by the Internet	119
2.1.5	Application-Layer Protocols	122
2.1.6	Network Applications Covered in This Book	123
2.2	The Web and HTTP	124
2.2.1	Overview of HTTP	124
2.2.2	Non-Persistent and Persistent Connections	126
2.2.3	HTTP Message Format	129
2.2.4	User-Server Interaction: Cookies	134
2.2.5	Web Caching	136
2.2.6	The Conditional GET	140
2.3	File Transfer: FTP	142
2.3.1	FTP Commands and Replies	144
2.4	Electronic Mail in the Internet	144
2.4.1	SMTP	147
2.4.2	Comparison with HTTP	150
2.4.3	Mail Message Format	151
2.4.4	Mail Access Protocols	151
2.5	DNS—The Internet’s Directory Service	156
2.5.1	Services Provided by DNS	157
2.5.2	Overview of How DNS Works	159
2.5.3	DNS Records and Messages	165
2.6	Peer-to-Peer Applications	170
2.6.1	P2P File Distribution	171
2.6.2	Distributed Hash Tables (DHTs)	177
2.7	Socket Programming: Creating Network Applications	182
2.7.1	Socket Programming with UDP	183
2.7.2	Socket Programming with TCP	189
2.8	Summary	194
	Homework Problems and Questions	195
	Socket Programming Assignments	205
	Wireshark Labs: HTTP, DNS	207
	Interview: Marc Andreessen	208

Chapter 3	Transport Layer	211
3.1	Introduction and Transport-Layer Services	212
3.1.1	Relationship Between Transport and Network Layers	212
3.1.2	Overview of the Transport Layer in the Internet	215
3.2	Multiplexing and Demultiplexing	217
3.3	Connectionless Transport: UDP	224
3.3.1	UDP Segment Structure	228
3.3.2	UDP Checksum	228
3.4	Principles of Reliable Data Transfer	230
3.4.1	Building a Reliable Data Transfer Protocol	232
3.4.2	Pipelined Reliable Data Transfer Protocols	241
3.4.3	Go-Back-N (GBN)	244
3.4.4	Selective Repeat (SR)	249
3.5	Connection-Oriented Transport: TCP	256
3.5.1	The TCP Connection	257
3.5.2	TCP Segment Structure	259
3.5.3	Round-Trip Time Estimation and Timeout	264
3.5.4	Reliable Data Transfer	268
3.5.5	Flow Control	276
3.5.6	TCP Connection Management	278
3.6	Principles of Congestion Control	285
3.6.1	The Causes and the Costs of Congestion	285
3.6.2	Approaches to Congestion Control	291
3.6.3	Network-Assisted Congestion-Control Example: ATM ABR Congestion Control	292
3.7	TCP Congestion Control	295
3.7.1	Fairness	305
3.8	Summary	309
	Homework Problems and Questions	311
	Programming Assignments	326
	Wireshark Labs: TCP, UDP	327
	Interview: Van Jacobson	328
Chapter 4	The Network Layer	331
4.1	Introduction	332
4.1.1	Forwarding and Routing	334
4.1.2	Network Service Models	336
4.2	Virtual Circuit and Datagram Networks	339
4.2.1	Virtual-Circuit Networks	340
4.2.2	Datagram Networks	343
4.2.3	Origins of VC and Datagram Networks	345

4.3	What's Inside a Router?	346
4.3.1	Input Processing	348
4.3.2	Switching	350
4.3.3	Output Processing	352
4.3.4	Where Does Queuing Occur?	353
4.3.5	The Routing Control Plane	357
4.4	The Internet Protocol (IP): Forwarding and Addressing in the Internet	357
4.4.1	Datagram Format	358
4.4.2	IPv4 Addressing	364
4.4.3	Internet Control Message Protocol (ICMP)	379
4.4.4	IPv6	382
4.4.5	A Brief Foray into IP Security	388
4.5	Routing Algorithms	389
4.5.1	The Link-State (LS) Routing Algorithm	392
4.5.2	The Distance-Vector (DV) Routing Algorithm	397
4.5.3	Hierarchical Routing	405
4.6	Routing in the Internet	409
4.6.1	Intra-AS Routing in the Internet: RIP	410
4.6.2	Intra-AS Routing in the Internet: OSPF	414
4.6.3	Inter-AS Routing: BGP	416
4.7	Broadcast and Multicast Routing	425
4.7.1	Broadcast Routing Algorithms	426
4.7.2	Multicast	431
4.8	Summary	438
	Homework Problems and Questions	439
	Programming Assignments	455
	Wireshark Labs: IP, ICMP	456
	Interview: Vinton G. Cerf	457

Chapter 5	The Link Layer: Links, Access Networks, and LANs	459
5.1	Introduction to the Link Layer	460
5.1.1	The Services Provided by the Link Layer	462
5.1.2	Where Is the Link Layer Implemented?	463
5.2	Error-Detection and -Correction Techniques	464
5.2.1	Parity Checks	466
5.2.2	Checksumming Methods	468
5.2.3	Cyclic Redundancy Check (CRC)	469
5.3	Multiple Access Links and Protocols	471
5.3.1	Channel Partitioning Protocols	474
5.3.2	Random Access Protocols	475
5.3.3	Taking-Turns Protocols	485
5.3.4	DOCSIS: The Link-Layer Protocol for Cable Internet Access	486

5.4	Switched Local Area Networks	487
5.4.1	Link-Layer Addressing and ARP	488
5.4.2	Ethernet	495
5.4.3	Link-Layer Switches	502
5.4.4	Virtual Local Area Networks (VLANs)	508
5.5	Link Virtualization: A Network as a Link Layer	512
5.5.1	Multiprotocol Label Switching (MPLS)	513
5.6	Data Center Networking	516
5.7	Retrospective: A Day in the Life of a Web Page Request	521
5.7.1	Getting Started: DHCP, UDP, IP, and Ethernet	521
5.7.2	Still Getting Started: DNS and ARP	523
5.7.3	Still Getting Started: Intra-Domain Routing to the DNS Server	524
5.7.4	Web Client-Server Interaction: TCP and HTTP	525
5.8	Summary	526
	Homework Problems and Questions	528
	Wireshark Labs: Ethernet and ARP, DHCP	536
	Interview: Simon S. Lam	537

Chapter 6 Wireless and Mobile Networks 539

6.1	Introduction	540
6.2	Wireless Links and Network Characteristics	545
6.2.1	CDMA	548
6.3	WiFi: 802.11 Wireless LANs	552
6.3.1	The 802.11 Architecture	553
6.3.2	The 802.11 MAC Protocol	557
6.3.3	The IEEE 802.11 Frame	563
6.3.4	Mobility in the Same IP Subnet	567
6.3.5	Advanced Features in 802.11	568
6.3.6	Personal Area Networks: Bluetooth and Zigbee	570
6.4	Cellular Internet Access	572
6.4.1	An Overview of Cellular Network Architecture	573
6.4.2	3G Cellular Data Networks: Extending the Internet to Cellular Subscribers	576
6.4.3	On to 4G: LTE	579
6.5	Mobility Management: Principles	581
6.5.1	Addressing	583
6.5.2	Routing to a Mobile Node	585
6.6	Mobile IP	590
6.7	Managing Mobility in Cellular Networks	596
6.7.1	Routing Calls to a Mobile User	597
6.7.2	Handoffs in GSM	598

6.8	Wireless and Mobility: Impact on Higher-Layer Protocols	601
6.9	Summary	604
	Homework Problems and Questions	604
	Wireshark Lab: IEEE 802.11 (WiFi)	609
	Interview: Deborah Estrin	610

Chapter 7 Multimedia Networking 613

7.1	Multimedia Networking Applications	614
7.1.1	Properties of Video	614
7.1.2	Properties of Audio	616
7.1.3	Types of Multimedia Network Applications	617
7.2	Streaming Stored Video	619
7.2.1	UDP Streaming	621
7.2.2	HTTP Streaming	622
7.2.3	Adaptive Streaming and DASH	626
7.2.4	Content Distribution Networks	628
7.2.5	Case Studies: Netflix, YouTube, and Kankan	634
7.3	Voice-over-IP	638
7.3.1	Limitations of the Best-Effort IP Service	638
7.3.2	Removing Jitter at the Receiver for Audio	640
7.3.3	Recovering from Packet Loss	643
7.3.4	Case Study: VoIP with Skype	646
7.4	Protocols for Real-Time Conversational Applications	649
7.4.1	RTP	650
7.4.2	SIP	653
7.5	Network Support for Multimedia	658
7.5.1	Dimensioning Best-Effort Networks	660
7.5.2	Providing Multiple Classes of Service	662
7.5.3	Diffserv	674
7.5.4	Per-Connection Quality-of-Service (QoS) Guarantees: Resource Reservation and Call Admission	678
7.6	Summary	681
	Homework Problems and Questions	682
	Programming Assignment	692
	Interview: Henning Schulzrinne	694

Chapter 8 Security in Computer Networks 697

8.1	What Is Network Security?	698
8.2	Principles of Cryptography	701
8.2.1	Symmetric Key Cryptography	702
8.2.2	Public Key Encryption	709

8.3	Message Integrity and Digital Signatures	714
8.3.1	Cryptographic Hash Functions	715
8.3.2	Message Authentication Code	717
8.3.3	Digital Signatures	719
8.4	End-Point Authentication	726
8.4.1	Authentication Protocol <i>ap1.0</i>	726
8.4.2	Authentication Protocol <i>ap2.0</i>	727
8.4.3	Authentication Protocol <i>ap3.0</i>	728
8.4.4	Authentication Protocol <i>ap3.1</i>	729
8.4.5	Authentication Protocol <i>ap4.0</i>	729
8.5	Securing E-Mail	731
8.5.1	Secure E-Mail	732
8.5.2	PGP	736
8.6	Securing TCP Connections: SSL	737
8.6.1	The Big Picture	739
8.6.2	A More Complete Picture	742
8.7	Network-Layer Security: IPsec and Virtual Private Networks	744
8.7.1	IPsec and Virtual Private Networks (VPNs)	744
8.7.2	The AH and ESP Protocols	746
8.7.3	Security Associations	746
8.7.4	The IPsec Datagram	747
8.7.5	IKE: Key Management in IPsec	751
8.8	Securing Wireless LANs	752
8.8.1	Wired Equivalent Privacy (WEP)	752
8.8.2	IEEE 802.11i	754
8.9	Operational Security: Firewalls and Intrusion Detection Systems	757
8.9.1	Firewalls	757
8.9.2	Intrusion Detection Systems	765
8.10	Summary	768
	Homework Problems and Questions	770
	Wireshark Lab: SSL	778
	IPsec Lab	778
	Interview: Steven M. Bellovin	779

Chapter 9 Network Management 781

9.1	What Is Network Management?	782
9.2	The Infrastructure for Network Management	786
9.3	The Internet-Standard Management Framework	790
9.3.1	Structure of Management Information: SMI	792
9.3.2	Management Information Base: MIB	796

9.3.3	SNMP Protocol Operations and Transport Mappings	798
9.3.4	Security and Administration	801
9.4	ASN.1	804
9.5	Conclusion	809
	Homework Problems and Questions	809
	Interview: Jennifer Rexford	812
	References	815
	Index	849
