

# Contents

	<i>List of contributors</i>	page ix
	<i>Preface</i>	xi
<b>1</b>	<b>Osborne Reynolds: a turbulent life</b>	<b>1</b>
	<i>Brian Launder and Derek Jackson</i>	
	1.1 Introduction	1
	1.2 Professorial career	11
	1.3 End piece	31
	References	37
<b>2</b>	<b>Prandtl and the Göttingen school</b>	<b>40</b>
	<i>Eberhard Bodenschatz and Michael Eckert</i>	
	2.1 Introduction	40
	2.2 The boundary layer concept, 1904–1914	42
	2.3 A working program for a theory of turbulence	47
	2.4 Skin friction and turbulence I: the $1/7$ th law	52
	2.5 The mixing length approach	54
	2.6 Skin friction and turbulence II: the logarithmic law and beyond	56
	2.7 Fully developed turbulence I: 1932 to 1937	62
	2.8 Fully developed turbulence II: 1938	67
	2.9 Fully developed turbulence III: 1939 to 1945	74
	2.10 Prandtl's two manuscripts on turbulence, 1944–1945	78
	2.11 Conclusion	87
	References	92
<b>3</b>	<b>Theodore von Kármán</b>	<b>101</b>
	<i>A. Leonard and N. Peters</i>	
	3.1 Introduction	101

3.2	The logarithmic law of the wall	104
3.3	Isotropic turbulence	109
3.4	Epilogue	123
	References	124
<b>4</b>	<b>G.I. Taylor: the inspiration behind the Cambridge school</b>	<b>127</b>
	<i>K.R. Sreenivasan</i>	
4.1	Opening remarks	127
4.2	Brief chronological account, focusing mostly on scientific career	131
4.3	Ideas originated in the period 1915–1921	133
4.4	The intervening period	141
4.5	Ideas explored in the period 1935–1940	143
4.6	A window into Taylor’s personality through his correspondence	153
4.7	Some reflections	169
	References	179
<b>5</b>	<b>Lewis Fry Richardson</b>	<b>187</b>
	<i>Roberto Benzi</i>	
5.1	Introduction	187
5.2	The 4/3 law	190
5.3	Richardson cascade and numerical weather prediction	199
5.4	Fractal dimension	204
5.5	Conclusions	206
	References	207
<b>6</b>	<b>The Russian school</b>	<b>209</b>
	<i>Gregory Falkovich</i>	
6.1	Physicist and pilot	209
6.2	Mathematician	212
6.3	Applied mathematicians	221
6.4	Theoretical physicist	229
6.5	Epilogue	233
	References	234
<b>7</b>	<b>Stanley Corrsin</b>	<b>238</b>
	<i>Charles Meneveau and James J. Riley</i>	
7.1	Early years	238
7.2	First contributions at Caltech	239
7.3	Arrival in Baltimore	243
7.4	Structure of scalar fields in isotropic turbulence	245
7.5	Scalar transport and diffusion	248

7.6	Homogeneous turbulence: decay and shear	255
7.7	The geometry and intermittency of turbulence	259
7.8	Turbulence and chemical reactions	263
7.9	The Johns Hopkins environment	266
7.10	Final years	269
	References	271
<b>8</b>	<b>George Batchelor: the post-war renaissance of research in turbulence</b>	<b>276</b>
	<i>H.K. Moffatt</i>	
8.1	Introduction	276
8.2	Marseille (1961): a watershed for turbulence	278
8.3	Personal background	280
8.4	Batchelor and the Kolmogorov theory of turbulence	281
8.5	Batchelor and the turbulent dynamo	285
8.6	The decay of homogeneous turbulence	287
8.7	Batchelor's 1953 monograph, <i>The Theory of Homogeneous Turbulence</i>	289
8.8	Rapid distortion theory	292
8.9	Turbulent diffusion	293
8.10	Two-dimensional turbulence	294
8.11	Later papers	296
8.12	George Batchelor as Editor and as Head of Department	297
8.13	International activity	299
8.14	Conclusion	301
	References	301
<b>9</b>	<b>A.A. Townsend</b>	<b>305</b>
	<i>Ivan Marusic and Timothy B. Nickels</i>	
9.1	Early years	305
9.2	Move to Cambridge	306
9.3	War years	307
9.4	Return to Cambridge	308
9.5	Putting K41 to the test	309
9.6	Shear flows	313
9.7	The Townsend hypotheses	314
9.8	Turbulent shear flows and eddies	321
9.9	Meteorological and other flows	323
9.10	Concluding remarks	325
	References	325

<b>10</b>	<b>Robert H. Kraichnan</b>	329
	<i>Gregory Eyink and Uriel Frisch</i>	
	10.1 Introduction	329
	10.2 Closures: realizability, Galilean invariance and the random coupling models; MHD turbulence	332
	10.3 Statistical mechanics and two-dimensional turbulence	342
	10.4 Intermittency	352
	10.5 Miscellany and conclusions	359
	References	364
<b>11</b>	<b>Satish Dhawan</b>	373
	<i>Roddam Narasimha</i>	
	11.1 Introduction	373
	11.2 The Caltech years	375
	11.3 At Bangalore	380
	11.4 Dhawan's approach to building engineering science	387
	References	390
<b>12</b>	<b>Philip G. Saffman</b>	393
	<i>D. I. Pullin and Daniel I. Meiron</i>	
	12.1 Introduction	393
	12.2 The problem of turbulent diffusion	397
	12.3 Contributions to the theory of homogeneous turbulence	402
	12.4 Saffman as critic	419
	References	421
<b>13</b>	<b>Epilogue: a turbulence timeline</b>	426
	<i>The Editors</i>	
	Bibliography and comments	429
